少年不識愁滋味
愛上層樓。
愛上層樓。
為賦新詞強說愁。

In youth I'd never tasted much
of sorrow
I liked to climb up high
I liked to climb up high
To conjure up a bit of sorrow to
sing a brand new song.

而今識盡愁滋味
欲說還休。
欲說還休。
卻道天涼好個秋。

Now I know too well the taste
of sorrow.
I start to sing then pause
I start to sing then pause
And sigh instead, "What a cool
and lovely autumn day."

— Xin Qiji (1140–1207), after Eileen Cheng-Yin Chao

Reed — 2399

“If you had to boil down this year into a sales pitch, what would it be?”

I laughed and bump my shoulder against Hanne’s. “A sales pitch?”

“Yeah,” she said, leaning briefly against me as we walk. “I’m in the market for a new year. Sell me the 2399 model. I’ve got a wide variety to choose from, so tell me why you decided to live through this one.”

“You’re a nerd. You realize that, right?”

“Tell me why I should be a nerd in the year 275. Next year we can decide on 276.”

I scuffed my heel against the pavement of the street. New Year’s Eve, and everyone was still inside. Bars: full. Restaurants: packed. There were a few scattered couples or groups around, but they were all walking with purpose. Champagne called. Canapes. Crudites.

And there we were, Reed and Hanne, arm in arm, strolling leisurely down the street, heedless of the passersby, to celebrate the last day of 2399, systime 275+365. Many, still lingering on the calendar still used phys-side, were doubtlessly partying extra-hard to celebrate the turn of a century.

“If you’re looking for the utmost in luxury, then it’s really hard to go wrong with 2399. The ride was just about as smooth as could be.”

“How about comfort?”

“Oh, very comfortable. Cushy, even,” I said, poking myself in the belly.

Hanne laughed. “Cute. How about the exterior?”

“No clue. It’s been a long, long time since I’ve had any reason to pay attention to the world outside. I imagine it looks just as confusing as it anyways has.”

“Well, okay, fair enough. You’ve been here longer than I have.”

“I keep forgetting you’re younger than me.”

She nodded. “Robbing the cradle, you are.”

“You’re 83.”

“Barely legal.”

It was my turn to laugh. “Whatever.”

“How about, uh... Features? Amenities?”

“Well, it’s got us in it, doesn’t it?”

She snorted and shoved me away from her. “Now who’s the nerd? Gross.”

I stumbled to the side, laughing. Our own champagne from earlier added a pleasant freedom of movement I only ever notice at two drinks. Any more and I become too loose and have a hard time staying upright. Any less and I don’t notice that any freedom was lacking.

“Is that so bad?” I asked. “Alternatively: am I not allowed to be a bit maudlin? It’s fucking New Year’s, Hanne.”

“‘Maudlin’? Is that even the right word?”

“What? Uh...” I hunted down a dictionary on the exchange, prowled through it. “Oh. Mawkish, that’s the one. Or saccharine, maybe? I don’t know. Maudlin still kind of works, doesn’t it?”

She tilted her head at me.

“‘Extremely sentimental,’ it says. Pretty sure that fits.”

Hanne rolled her eyes, grinning. “Okay, yeah, that fits you to a tee.”

We walked in silence for a few minutes. I tallied the occupants of the various restaurants along the way, making note of the busiest to check out on some less-busy night. Good date

spots, perhaps.

“What was it like when you uploaded?”

“You mean phys-side?”

Hanne nodded. “What was Earth like? What was your life like?”

I shrugged. “Fine, I guess. The Western Fed was swinging conservative again, it was hot as hell all the time, most places were starting to subsidize uploading despite an already declining population. I guess that makes it sound terrible, and maybe it would have gotten worse, but I wasn’t around to see it. We were doing alright, so maybe I was kind of sheltered.”

“I hear you on the hot as hell part. We couldn’t afford moving south when it got too bad, so we moved up into the mountains. It helped a little bit, at least.”

“When was that?”

“2320 something. I don’t remember. I think I was under ten, at least.”

I nodded. “I guess that’s what I mean by sheltered. We were already up in Newfoundland. Summers sucked, winters sucked, but it was alright between them.”

“Autumn or spring?”

“Huh?”

“Pick one, dummy,” she said, laughing.

“Oh, autumn, for sure. Autumn bitch all the way.”

“I knew it.”

I rolled my eyes. “I’m nothing if not myself.”

“So why’d you upload?”

“You know that already.”

Hanne shook her head. “You said to transition, sure, but didn’t you already do that back phys-side?”

I stayed silent, picking apart my thoughts on the matter. “I-Marsh got sick of being trans. They wanted to just be a man, not a trans man.”

“You’re a trans man, though.”

“Sure, but that’s not what they wanted at the time. They started to miss it by the time they forked.”

“Why?”

I laughed. “So many questions tonight.”

She grinned, shrugged.

“Well, I think half of it was that there was just too much pressure at the time. Like I said, the WF was swinging conservative, so there was this push to assimilate, and we internalized that pretty hard. We felt pushed to just shut up and be a man, just disappear, and always felt that we fell short despite all we did to try, but on Lagrange, we could do that right off the bat.”

“So they went back to being trans—”

I shook my head, cutting her off. “They’ve given up on gender. I became the way they experienced that again.”

“Sorry, Reed.”

“No, it’s okay,” I said, feeling a rush of warmth to my cheeks. “Didn’t mean to get too pushy. It’s still a little tender, I guess.”

The shadow of her shoulders relaxed again in the dark of the night. “Even after so long?”

“Yeah. Like I said, we internalized it pretty hard, even as they tried to diversify later on. I headed back trans, Lily headed back feminine, and Cress embodies the negation.”

“Is that why you forked, too?”

I grinned. “I forked for fun. Even if it’s still a tender spot, I think I’m still way more relaxed than they are. There may be a bit of that in Tule, I guess. He’s still pretty happy being a guy — he’s the only one out of all of us, come to think of it. Rush is as he is of his own choice, though.”

Hanne looped her arm through mine. “Well, I still like you as you are.”

“What, trans?”

“No, a huge nerd.”

“Of course.” I bumped my shoulder to hers. “Why’d you unload, then?”

“The weather. The money. All the same stuff the government

told us. Same as most people, I think. I internalized that as much as Marsh did the whole gender thing.”

“Was the WF still on its conservative swing?”

“The Republic of Argentina wasn’t part of the Western Federation.”

“Oh, right. I guess I knew that.”

She shrugged. “Sure. But either way, they were somewhere in the middle, maybe. There was this big push from the liberal side on the climate, and this big push on the conservative side on the financial side. They said they could cut costs on services if there were fewer of us. Dad was with them, mom was with the libs. It was one of the few things they could agree on. They said they’d miss me, but they weren’t exactly sad when I went the Ansible.”

“‘Went the Ansible’? Is that what you called it?”

“‘Uploading’ sounds so sterile,” she said, nodding. “‘Went the Ansible’ just made it sound like moving away from home.”

“Well, I’m glad you went the Ansible, then.”

“Sap.”

I laughed. “Got it in one.” Champagne tinted evenings faded, as they do, into brandy-colored nights. Amber nights and fireplaces for the hell of it, me and Hanne settling in for a little bit of warmth for that last hour, not quite decadence and a ways off from opulence, but still a plush couch and a fire and sniffers slightly too full of liquor.

We shared our warmth, sitting side by side on the couch, and we continued to talk, talking of the year past, of years past beyond that, and of however many we decided were ahead. A hundred years? Two hundred? Only five? I made an impassioned argument for five more years of life, then laughed, changed my mind, and say I’ll never die. Hanne said she’ll live for precisely two hundred, give up, and disappear from Lagrange. She’d fork at a century and never speak to that version of her again, that exact duplicate, and should that instance decide to live on past two centuries, so be it, but she’d decided her expiration.

I scoffed. “What? And leave me behind?”

“Of course. Can you imagine six score years with someone? Absolutely miserable.” She rested her head on my shoulder and shrugged. “We’re a ways off from that, I think I still like you now.”

“You think?” I draped my arm around her shoulders. “Still not sure?”

“I’m sure I think I like you.”

I laughed. “Yeah? Well, what can I do to cement your opinion of me? What can I do to make you sure that you like me?”

“There’s a whole laundry list,” she said, sipping her brandy.

“Pop one. I could use a goal for 276.”

Hanne held up her glass appraisingly. “Well, we could work on your taste in liquor.”

I snorted. “What would you rather I drink?”

“Scotch.”

“That always struck me as so manly, though.”

“Sounds fake.”

“Oh, I’m pretty sure it is, but we’re beholden to stereotypes.”

She poked me in the side, grinning. “You must be drunk if you’re using words like ‘mawkish’ and ‘beholden’. Let’s see. You could introduce me to Marsh, maybe.”

I shook my head. “That’s not on me, you know that. We have a one-way relationship.”

“But they’re your down-tree instance! You’re patterned after them. You talk every year *at least* once, right? You’ll talk to them later tonight, right? You have for the last hundred.”

“No, probably not. If I hear from them directly, anything more than just a ping, I’ll know something’s gone horribly wrong.” I leaned back — carefully, what with her head resting on my shoulder. “Like I say, it’s a one-way relationship. All I do is live my own life, right? I stay in touch with the rest of the clade to greater or lesser extent, but Marsh has their own life.”

“They have several.”

“Right. We all fork, we all merge back down to whoever our

down-tree instance is, and since I was forked from them, I merge down directly. They get all our lives, one year at a time, but we don't really get anything in return."

I could hear the frown in her voice. "How miserable."

"What, our relationship?"

"Just...them. How miserable they have to be, right? They live their life doing whatever, spending their whole year remembering the previous year from, what, five instances?"

"Six. Me, Lily, Cress, Rush, Sedge, and Tule."

"That's another thing you could do: be a little less weird."

I chuckled, kissed atop her head. "Uh huh. Love you too."

"But I was saying they have to be miserable. They chill out in their house and spend their days remembering yours, you and your cocladists, and just living vicariously through you all."

"That's not all they do. They sing. They have Vos and Pierre, right? They spend time with their partners. They go to Vos's plays. They have friends over. They sing a lot. They cook—"

"Are they as bad a cook as you?"

"Oh, worse, according to Tule's girlfriend. Truly terrible."

She laughed.

"They have a full and fulfilling life, is what I'm saying. They're happy, it's just that their happiness doesn't include communication with their up-tree instances."

"Why not?"

I yawned, slouched down further on the couch along with Hanne. "They very specifically want us to live our own lives. They don't want us to just be other versions of them. They can make all of those they want for their little tasks. They specifically want us to be something other than what they are so that they can experience that on their own terms."

"Don't see how that's any different," she mumbled. Sleep threatened, even with some time left before midnight. "You all merging down like that is just doing the same thing in reverse, You're making them a version of you all, even if you're not just a version of them."

I turned that thought over in my head, held it at arms length, let the light of the fire shine through the fog of champagne and brandy onto it to admire just how strangely it was shaped. “Well, huh.”

“See? You’re so weird.”

“I guess we are,” I said, smiling and nudging Hanne upright once more. “No dozing off, now. Not yet.”

She grumbled and rubbed at her face. “Sorry if that came off as rude. I guess it’s just outside my understanding.”

I scooted up onto the couch, myself, sitting cross-legged to face her. “It’s okay. It’s not wrong, even, I just don’t think it’s wholly right, either. It’s a matter of intent. Our intent is to live our own lives to the fullest, and it’s their intent to let us do so and yet still be able to experience that at one layer of remove. We’ve been doing it for a century, and it’s worked out well enough since then. If all this—” I waved around the room, feeling the gentle spin of drunkenness follow the movement, “—is just a dream, if we’re all doing our best to dream in unison with each other, then I think intent may be all that we have, right? However may billion or trillion people have uploaded are all trying to dream the same dream together, all mixed up and poured into the same System, we have to form what meanings we may on our own.”

“I think we broke two trillion instances a while back. I don’t know how may uploads, but I don’t think it’s hit a trillion yet.”

“Right. Sorry, guess I’m kinda rambly when I’m drunk.”

Leaning forward, she gave me a light kiss. “It’s okay, I like it when you ramble. Just don’t lose track of the time.”

23:45.

I started to nod, then stiffened as I felt first one, then another set of memories crash down onto me. “*Fuck*. One of these...days I’ll convince...them to give me some warning...sec...”

Hanne laughed and shook her head, standing from the couch to go get herself a glass of water.

I closed my eyes to turn down one of my senses, setting the

sweet-smelling glass of brandy aside to rid myself of another as best I can. I sat and spent a moment processing, savoring the memories. Rush had merged down first; ve had split off a new copy of verself, and then the original had quit. On doing so, all the memories ve'd formed over the last year fell down onto me, ready to be remembered like some forgotten word on the tip of my tongue: all I needed to do is actually remember. Clearly, Tule had already forked and merged back down into Sedge, as their combined memories piled yet more weight on me. Three sets of memories — two from my direct up-tree instances and one from a second-degree up-tree instance — rested on my mind, ready for integration.

There'll be time for full perusal and remembering later. It was rapidly approaching midnight, and I needed to get the memories sorted into my own, interleaved and zippered together into as cohesive a whole as best I can manage, all conflicts addressed — though with as separate as their lives had been until then, there was thankfully quite little in the way of conflicting memories — so that, shortly before midnight, I could fork, myself, let that new copy of me live out the next year with Hanne, with all their joys and sorrows, while the original instance quit and let all those memories — those of Rush, Sedge, Tule, and myself — fall to Marsh to process, savor, and treasure for themselves.

I heard Hanne return, heard her climb back onto the couch before me, felt her press a cold glass of water into my hand.

Five minutes left.

Three.

23:58, and I opened my eyes and smiled. “Well, seems like it’s been a pleasant enough year for everyone involved, though I’ll deal with all the rest of that later.”

“It continues to amaze just how good you are at that.”

“What, merging?”

She nodded.

“It feels pretty straight forward for me,” I said. “I just...remember it all, and when memories or outlooks on

life don't line up, I choose mine.”

She laughed. “Still, far better than I am at it.”

23:59.

“Practice, maybe,” I said. “But hey, happy New Year.”

“Is it time, then?” she asked.

I nodded, willed away the drunkenness, took a sip of water, and, with a rush of intent, brought into being beside us a new instance of myself. Exactly the same. *Precisely*. Had such a thing any meaning to an upload, we would be the same down to the atomic level, to the subatomic. All of the memories, all of the personality, all of the history.

For a fraction of a second, at least. From that point on, we began to diverge, each remembering things differently. The Reed that still sat on the couch saw Hanne from *this* angle, yet the one that stood beside the couch saw her from that. The one that sat on the couch felt the fire on his cheek, the one standing felt it on his back.

“Alright. I love you, Hanne Marie. I'll miss you.”

She rolled her eyes. “Tell Marsh I said-

Marsh — 2401

“See? You’re so weird.”

“I guess we are,” I said, smiling and nudging Hanne upright once more. A flash of *déjà vu* struck me squarely in the right temple, a headache amid the buzz of alcohol. “Hey now, no falling asleep on me.”

“Right, sorry. Still, uh...still fifteen minutes.” She grumbled and rubbed at her face. “Sorry if that came off as rude. I guess it’s just outside my understanding.”

I scooted up onto the couch, myself, sitting cross-legged to face her. “It’s okay. It’s not wrong, come to think of it, I just don’t think it’s wholly right, either, you know? It’s more a matter of intent. Our intent is to live our own lives doing as we will rather than as they would, and it’s their intent to let us do so — and by not interfering, even with communication, *force* us to do so — and yet still be able to experience that almost like a dream. They forked us off a century ago, me, Lily, and Cress, and we’ve been doing it for the last century, and it’s worked out well enough since then. They’re more than just Marsh, now. They’re Marsh and all of us. If all this—” I waved around the room, feeling the gentle spin of drunkenness follow the movement, “—is just a dream, if we’re all doing our best to dream in unison with each other, then I think intent may be all that we have, right? However may billion or trillion people have uploaded are all trying to dream the same dream together, all mixed up and poured into the same System, we have to form what meanings we may on our

own.”

“I think we broke two trillion instances a while back. I don’t know how many uploads, but I don’t think it’s hit a trillion yet.”

“Right. Sorry, guess I’m kinda rambly when I’m drunk.”

Leaning forward, she gave me a light kiss. “You know I like it when you ramble. Just don’t lose track of the time.” She stood up straight again and squinted out towards nothing. “Weird. *Déjà vu.*”

23:45.

I started to nod, willed away the drunkenness, then stiffened as I felt first one, then another set of memories crash down onto me. “*Fuck.* One of these...days I’ll convince...them to give me some warning...sec...”

Hanne laughed and shook her head, stepping away from the couch to go get herself a glass of water.

I closed my eyes to turn down one of my senses, taking one more sip of the sweet-smelling brandy before setting it aside to rid myself of another two as best I could. I sat and spent a moment processing, savoring the memories. Rush had merged down first; we had split off a new copy of ourselves then the original had quit. On doing so, all the memories we’d formed over the last year fell down onto me, ready to be remembered like some forgotten word on the tip of my tongue: all I needed to do was actually remember. Clearly, Tule had already forked and merged back down into Sedge, as their combined memories piled yet more weight on me. Three sets of memories — two from my direct up-tree instances and one from a second-degree up-tree instance — rested on my mind, ready for integration.

There would be time for full perusal and remembering later. It was rapidly approaching midnight, and I needed to get the memories sorted into my own, interleaved and zipped together into as cohesive a whole as I could manage, all — or, at least, almost all — conflicts addressed (though with as separate as their lives had been until then, there was thankfully quite little in the way of conflicting memories), so that, shortly before

midnight, I could fork and quit, myself, letting that new copy of myself live out the next year with Hanne, with all their joys and sorrows, while my original instance quit and let all those memories — those of Rush, Sedge, Tule, and myself — fall to Marsh to process, savor, and treasure for themselves.

I heard Hanne return, heard her climb back onto the couch before me, felt her press a cold glass of water into my hand.

Five minutes left.

Two.

23:59, and I opened my eyes. “Well, seems like it’s been a pleasant enough year. I’ll deal with all the rest of that later.”

“Is it time, then?” she asked.

I nodded, took a few long gulps of water, and, with a press of will, brought into being beside us a new instance of myself. Exactly the same. *Exactly*. Had such a thing any meaning to the uploaded consciousness, we would have been the same down to the atomic level, to the subatomic. All of the memories, all of the personality, all of the love and hate and past that made us *us*.

For a fraction of a second, at least. From there, we began to diverge, each remembering things differently. The Reed that still sat on the couch sees Hanne from *this* angle, and yet the one that stood beside the couch sees her from that. The one that sat on the couch felt the fire on his cheek, the one standing felt it on his back.

“Alright. I love you, Miss Hanne Marie. I’ll think of you often.”

She rolled her eyes. “No you won’t. Tell Marsh I said hi.”

I laughed and, as the clock strikes midnight, willed myself to quit.

Then frowned.

“Something wrong?”

I held up a finger and closed my eyes. Once more, I thought to myself, *I’m ready to quit*, then then willed that to be reality.

Rather than the sudden nothingness that should have followed, I felt the System balk. Resist. I felt an elastic sensation

that I'd never felt before. There was a barrier between me and the ability to quit. I felt it, tested it, probed and explored. It was undeniably present, and though I sensed that I could probably have pressed through it if I desired, it was as though Lagrange desperately did not want me to quit. It didn't want the Reed of now to leave the System.

"I can't."

"You can't?" Hanne tilted her head, then leaned forward to take one of my hands in her own. "I mean, it's okay if you don't want to. I don't think Marsh will mind if you're a few minutes late. Hell, you can even send them a message saying you don't want to this year. I think they'll—"

"No, Hanne," I said, carefully slipping my hand free so that I could stand. I needed to pace. I nodded to my new fork, who quit. I declined the merge. "I mean I can't. I'm not able to. It's impossible. Or possible, but— wait, hold on."

It had been more than a decade since I'd done so, but if ever there was a time, this was it. There were very few reasons that the System would try to stop an instance for quitting and one of them...well, no— It'd been more than a decade since I had broken the communication embargo, but I sent Marsh a gentle ping.

Or *tried* to, at least.

All the ping was was a gentle nudge against the recipient's sensorium, a sense that someone was looking for them, was seeking them out, was just checking if they were free, if they were even there. From the sender's side, it felt like a gentle touch, a brush of some more metaphorical finger against the symbolic shoulder of the recipient, a reassurance that they were indeed there.

But there was nothing. I felt nothing. No sense of Marsh. Attempting to send a sensorium ping to someone that doesn't exist just felt like daydreaming. It felt like a silly, pointless imagining, as though one was imagining that they could touch God on the shoulder or shake hands with the devil.

I frowned, pinged Hanne.

“What?” she said, her frown deepening.

“Hold on, one more sec.”

00:02.

I thought across the clade, thought of one of Marsh’s other forks. Pinged Lily.

The response was immediate, words flowing into my consciousness through some sense that wasn’t quite hearing.

“What’s happening? I can’t-”

Pinged Cress, the other fork. Asked, *“Cress? Can you-”*

“What the fuck is happening?” came the panicked response.

“My place,” I sent back, followed by my address. I repeated the message to Lily and, on a whim, my own up-tree instances, Rush, Sedge, and Tule.

00:04.

Cress arrived almost immediately along with Tule — they shared a partner, so it made sense they’d be together for the evening — leading Hanne to start back on the couch. “Reed,” she said, voice low. “What is—”

Lily arrived next, already rushing forward to grab my shoulder. “You can’t either?” she said, voice full of panic.

Before I could answer, Sedge and Rush arrived. The living room became quite crowded, all five of the other instances of the Marsh clade clamoring over each other to talk to me, the first long-lived fork from Marsh.

“Reed!” Hanne shouted, standing and stamping her foot. She spoke carefully, and I could hear anger just beneath that tone. “What happened?”

The rest of the clade looked to me as well, and I quailed under so many gazes. “I can’t quit. I can’t merge down. I can’t reach Marsh. They—” my voice gave out and I had to take a shaky sip of water. “They’re not on Lagrange, as far as I can tell.”

00:07.

Silence fell thick across the room. The clade — Marsh’s clade — stared, wide-eyed. Their expressions ranged from unsure to terrified. I couldn’t even begin to imagine what expression

showed on my face.

“Okay, no, hold on,” Hanne said, shaking her head and waving her hand. She appeared to have willed drunkenness away, much as I had, as her voice is clear, holding more frustration than the panic I felt. “Did they quit? They couldn’t have, right? You just pinged them earlier today.”

I nodded.

“And they said nothing about quitting?”

“Nothing.”

Hanne glanced around the room, singling out Marsh’s other two immediate up-tree instances, Cress and Lily. Both shook their heads.

“I was just talking to them about an hour ago, actually.” Lily said. “They and Vos were wrapping up the first part of the night’s celebration and they were going to—”

“Vos!” I shouted. “Shit, sorry Lily.”

It took a moment for Vos to respond to my ping. “Reed? It’s been a bit. What’s up?”

“Is Marsh there?” I sent back.

“I don’t know. I figured they were in the study waiting on you. I just made us drinks, but they’re not in there now. Is something wrong?”

“Can you ping them?”

There was a short pause, followed by a sensorium glimpse of a familiar room, that study from so long ago, every flat surface that wasn’t the floor covered in stacks of unread books. Empty.

“What’s happening?” Vos sent. There was an edge of caution to her voice, the sound of a thin barrier keeping anxiety at bay.

“Pierre?”

“One second.” Another pause, and then, quickly, “Wait, can we just come over? What’s your address?”

I messaged over the address, and a few seconds later, Fenne Vos and Pierre LaFontaine arrived holding hands, leading to another yelp from Hanne.

“You must be Vos! Hi,” she said, preempting any of Marsh’s up-tree instances. “Do you know where Marsh is?”

Some small part of me looked on in admiration. Hanne had kept much of the panic that was coursing through me and my cocladists out of her voice. I could feel a shout building within me and I knew from past experiences with Vos and Pierre that that would only make things worse.

“We didn’t see them around,” Vos answered, that barrier between caution and worry seemed to be giving way. “Why? If you’re all here, I’m guessing something happened.”

“Have you been able to ping them?”

Both Vos and Pierre shook their heads.

The sight of Cress and Tule bowing their heads to whisper to each other caught my eye, and a moment later their partner, a stocky woman with curly black hair, appeared between them, looking as though she’d come straight from a party, herself. I felt a muffled pang of affection for her, lingering emotions from my up-tree instance’s memories.

“Stop!” Hanne said, then laughed nervously at the silence that followed. She gestured absentmindedly, pressing the bounds of the sim outward to expand the room. It had started getting actively crowded. “You’re doing it again, Reed.”

“What?” I tamped down indignation. “Sorry, Hanne, there’s a lot going on.”

“Right, I get that, but can you start at the beginning for those of us outside the clade? What did you mean, you don’t think they’re on Lagrange?”

At this, both Vos and Pierre took a half-step back, looking startled.

00:11

I spent a moment composing myself. I stood up straighter, brushing my hands down over my shirt, and nodded. “Right. I’m sorry, love. When midnight hit, I forked and tried to quit as usual. I couldn’t, though. The System wouldn’t let me.”

Cress and Tule’s partner, I Remember The Rattle Of Dry Grass of the Ode clade, stood up stock straight, all grogginess — or perhaps drunkenness — from the party fleeing her features.

“That’s only supposed to happen when quitting would mean the loss of too much memory, though. The root instance can barely quit at all in the older clades—” Dry Grass winced. I did my best to ignore it and continued. “—because the System really doesn’t like losing a life if it won’t be merged down into a down-tree instance.”

“So, you couldn’t quit because...” Hanne said, urging me on.

“Well, I imagine the same is true for anyone with lots of memory inside them. If there’s no one to merge down into, it just looks like...like...”

“Like death,” Dry Grass said darkly. “It looks like death. You could not quit because, to the System, you and all of your memories would die, and the System is not built for death. That is what it felt like, is it not? It felt like you could not possibly quit without pushing the weight of the world uphill?”

I frowned. “Perhaps not all that, but it certainly felt like I was trying to push against something really hard. It didn’t feel like it was impossible like anything else the System would prohibit, it just felt like I was being forced away from that option.”

“Like death,” she muttered again. Vos begins to cry. “Marsh is not on the System, then, no.”

“So are they...is Marsh dead?” Pierre whispered, his own voice clouded by tears. Vos towered over him — over all of us, really — and had always seemed as though she could weather a storm better than any stone, but now, even she looked suddenly frail, fragile in the face of the loss they were all only talking around.

“They are not on the System,” Dry Grass and I echoed in unison.

“How can you be sure, though?” Hanne asked. “You can’t merge down, sure, and you can’t ping, but could they just be in some locked down sim or a privacy cone or something? Can those even block merges?”

Lily shook her head. “Not that I know of, no. I don’t think anything blocks a merge.”

“Nothing blocks merges, correct,” Dry Grass said. “That would leave potentially much in the way of memory lingering with nowhere to go, and the System does not work that way.”

Slowly, all within the room began to face her rather than me, at which I breathed a silent sigh of relief. That I was the oldest fork of Marsh’s didn’t necessarily give me any more of the information that they all so desperately craved. Dry Grass was more than a century older than I was, however, and if anyone might have answers...

“How do you know, love?” Tule asked.

“I worked as a sys-side System tech.”

Cress laughed. It sounded forced. “And you never thought to tell us?”

“This was before you were born, my dear. Before Marsh’s parents were born, even. It was a long time ago, and I have since moved on.”

“Well, is there a way to find out what happened?”

She frowned down to her feet as she thought. “It used to be that there were rotated audit logs for events like forking and quitting. I do not know if those are kept any longer, though, given how large they would get in a very short amount of time. Perhaps?”

“Well, how do we check those?” Rush said, speaking up for the first time since that initial clamor of voices.

Dry Grass spread her hands helplessly. “I do not know. Again, it has been two centuries since I worked as a System tech. The technology has changed much. I would need access. I would need time to remember. Time to research.”

“Do we even *have* time?” Lily growled at her, frustration apparently winning out over panic. Cress and Tule both gave her a sharp glance.

00:15

“I do not know. I am sorry,” Dry Grass said, bowing. “I will fork and read up as fast as I can. May I remain here?”

“Please,” Cress and Tule said in unison. Sedge, Rush, and I,

along with Marsh's partners, all nodded. Lily did not. Hanne only frowned.

Dry Grass bowed once more, forked, and the fork stepped from the sim to, I suppose, go lose herself in the perisystem architecture, hunting down what information she could. They could only hope that she still had the permissions to find what she needed.

"Hey, uh," Sedge said into the uncomfortable silence that fell once more. "Has anyone checked the time?"

Everyone tilted their heads almost in unison. It was more a habit than anything, hardly a required motion, but the habit that Marsh had formed so many years ago had stuck with all of the Marshans throughout their own lives.

Systime 277+41 00:17.

"Wait, what—"

"277? But—"

"It says 2401, too!"

Everyone talking at once quickly grew overwhelming. I shook my head, covered my ears with my hands, then, remembering that I was standing in the middle of a small crowd, tried to mask the movement by turning it into running my fingers through my hair.

"Okay, one at a time," I said, having to speak up to drown out further exclamations. "I'm seeing 277+41. Everyone else seeing the same thing?"

Nods around.

"Any, uh..." I swallowed drily, looked around, and grabbed the glass of water that still sat, neglected, on the table beside the couch. After a careful sip, I tried again. "Any ideas as to what might have happened?"

Silence.

"Well, has anything like this happened before?"

Everyone in the room turned to look at Dry Grass, who shrugged helplessly. "Not that I can remember. The closest would be periods of downtime. It has happened a few times over

the centuries. There was a few days of downtime while Lagrange was being set up during Secession, a few hours here and there.”

“But not, what...thirteen months?” Cress asked.

“I have never seen that amount of time lapse, no.”

Tule piped up, saying, “Nothing on the perisystem about anything like this happening before, but holy shit are the feeds going off.”

“Really?” I asked, then laughed. “Sorry, stupid question. Of course they are.”

“And?” Rush said, impatient. “What are they saying?”

“It’s pretty much this conversation repeated a million times over. I think a lot of people doing the same sort of thing we are. A lot of talking about the jump in time, about trying to quit and...”

Vos frowned. “And what?”

“Well, I mean,” Tule stammered. “Same thing, I guess. Nothing.”

Dry Grass tilted her head, then nodded. “Another fork is keeping a tally. Missing instances are now numbering in the thousands.”

Vos took another half-step back. “Wait, *thousands*?”

“It is proving difficult to keep up with the feeds,” she said, speaking slowly. Perhaps still receiving updates? “One of me is just reading the feeds and marking a tally every time a missing instance is mentioned.”

“Thousands, Jesus,” Hanne whispered. “I should check in on Jess. And probably—”

She started as Pierre sagged briefly against Vos, then either quit or left the sim. “He...I mean...” Vos began, shook her head, and then followed suit.

“Do you two need anything?” I sent to Vos. “Or just space and quiet?”

“The latter,” she replied after a few long seconds. The sensorium message was so clearly sent between sobs that I had to swallow down the same sensation rising in my throat.

“Give them some space,” I mumbled against that awkward

pressure in my chest. “So, okay. What’s the whole story again? Midnight hit and suddenly it’s thirteen months–”

“Thirteen months and ten days, almost exactly,” Sedge corrected.

I sighed, nodded. “Right. Midnight hit and the date jumped forward and now there are thousands of–”

“Tens of thousands,” Dry Grass said, then averted her gaze. “Apologies.”

“It’s alright. Tens of thousands of people missing. The feeds are going nuts. What about phys-side? Anything from them?”

“I have not been looking. I am uncomfortable with phys-side. There is a reason I am no longer a tech.”

“I’ll take a look,” Rush said. Ve forked quickly, the new instance almost immediately disappearing as ve stepped from the sim. “Though I’m not as fast at it as you are.”

“Anything from Castor or Pollux? Or Artemis? It’s only a few months round trip, definitely less than thirteen. We don’t really talk. I don’t have anything from any of the Marshans on the LVs.”

“Shit,” Dry Grass whispered, expression falling. “Yes, there is.”

When she didn’t continue, Lily stamped her foot, growling, “And? You can’t just leave that hanging there! I don’t fucking get you Odists, you’re always–”

“Lily!” Tule and Cress said as one.

She made a show of regaining her composure, movements overly liquid as she straightened up and brushed a lock of hair out of her face. “Sorry.”

An awkward silence lingered, overstaying its welcome. Eventually, Dry Grass’s shoulders slumped. “You do not need to apologize. The messages will only affirm your feelings about my clade. The eighth stanza continues to manage the flow of information in–” She cut herself off and dug her hands into her pockets, an oddly bashful gesture. “I should not be telling you this, understand. I am not even supposed to be in contact with them, Hammered Silver would have my head if she knew, but Need An

Answer has been in contact. Please do not share any of this.”

“‘Eighth stanza?’” Hanne asked.

“Yes. One hundred of us, each named after a line in a poem broken into ten stanzas,” she said. “The eighth is—”

“True Name,” Lily said through gritted teeth.

“Sasha,” Dry grass corrected, then shook her head. “Apologies. Yes, that is the stanza focused on...politics and information control.”

Lily pointedly looked away.

“They continue to manage the situation, I mean, and, from the sounds of it, they are describing it as an issue with the Deep Space Network and the Lagrange station. There are few mentions of the Lagrange *System* itself. I can read between the lines as well as any of them, though, and I do not think this is true. At least, not wholly.”

“Wait,” Cress said. “So they’re saying that there’s a problem with the DSN and the station? How do you mean?”

“There are a few messages from over the last thirteen months, but they are queued up as though they have been held until now. There has been no contact between the LVs or Artemis and Lagrange.” There was a pause as Dry Grass’s gaze drifted, clearly scanning more of those messages. “Most messages have been discarded...only a few from the Guiding Council on Pollux plus a few clades on Castor...have been let through...outgoing messages are ungated...”

“There’s a bit about that in news from phys-side, actually,” Rush said, looking thoughtful. “Communications failure on the Lagrange station. Something about aging technology. The DSN was also having problems so a few new repeaters were launched. Some from the station, even.”

“But nothing about the System?”

Both Rush and Dry Grass shook their heads.

“What did you mean about reading between the lines, though, love?” Tule asked.

“The messages are very stilted. There is panic beneath the

surface. That they mention so little about Lagrange is as telling as if they were to say they did not know. They *do* know, they are just refusing to talk about it over messages.”

“Why?” Lily asked. While there was still an edge to her voice, genuine concern covered it well.

“‘Information security and hygiene’. At least, that is what they would say were I to ask. Even if the messages were to fall into the wrong hands, sys- or phys-side, they would not show anything else having happened. I am of them, however. I can read some of the words that were not written.”

“But news from phys-side says the same thing,” Rush said.

She shrugged, another sheepish motion, and looked away. “Do you really expect that we are receiving unfiltered information from phys-side?”

I stole a glance at Lily. She looked to be spending every joule of energy on keeping her mouth shut.

There had been an enormous row within the clade when first Cress, then Tule, had gotten in a relationship with a member of the Ode clade. Most of the Marshans had largely written off the stories of the Odists’ political meddling as overly fantastic schlock, yet more myths to keep the functionally immortal entertained. Even if they had their basis in truth, they remained only stories.

Lily, however, had had an immediate and dramatic reaction, cutting contact with the rest of the clade — including Marsh — for more than a year. She had even refused to merge down for years until tempers had settled.

Hanne spoke up. “Listen, can we maybe give this a few hours to play out? I need to sleep, and if Reed doesn’t take a break, he’s going to explode.”

The others laughed. I felt a twinge of resentment. Shouldn’t they be dumping all of their energy into this? Shouldn’t they all fork several times over and throw themselves at the problem? Still, it was true enough, and if they stood around the living room spinning their wheels any longer, tempers would continue

to flare.

“Yeah,” I said. “Give me at least four hours. I’ll do a little digging and grab some sleep, then maybe we can meet up somewhere else and talk through what we’ve learned.”

“I’ll keep digging at phys-side news,” Rush said. “Want to help, Sedge?”

She nodded.

Tule and Cress nodded as well. “We’ll help out Dry Grass,” Cress said.

“Lily?”

“I’m just going to get some sleep,” she said stiffly. “Sorry for yelling.”

Cress shook its head, leans over, and hugged her. “Take the time you need.”

“Right. Let’s meet at a park or something in the morning. Hanne will kill me if you all pile in here again,” I said, at which Hanne nodded eagerly. “And I imagine things are going to be really weird out there, so I don’t want to pile into a bar or whatever.”

“Really, really weird,” Sedge muttered. One by one, the other Marshans stepped away from my and Hanne’s sim until it was just the two of us, the fire crackling, the weight of the evening hanging over, between us. We stood in silence for a few long moments before I stumbled back over to the couch and fell heavily into the cushions. I buried my face in my hands and only then let the grief take me.

Hanne sat beside me, got her arm around my back. She rested her head on my shoulder as the wave of emotion overcame me. At first, she asked if I’m alright, then she whispered a few “I’m sure it’ll work out”s and “it’s going to be okay”s before eventually just sitting with me in silence.

“This is really fucking weird,” I said once I was able to speak again. The sound of speech echoed strangely in my head, muffled in that post-cry mess. “I don’t even know who I’m crying for. It’s not like they’re a parent, I came from them, but they aren’t

me, either.”

“A bit of both, maybe?”

I shrugged. “Maybe.”

“Do you really think they’re gone?”

I shrugged again, stay silent.

Hanne nudged me gently with her shoulder. “Come on, Reed. Let’s get you to bed.”

“I don’t think I’ll be able to sleep. Not after all that.”

“Still,” she said, leaning over to kiss my cheek. It felt too hot, too intense a sensation, but I felt calmness radiate from that spot all the same. “If nothing else, you can lay down in the dark and give your poor eyes a break. Plus, I need to sleep, at least.”

How could I stand, knowing as I did that the clade had become unmoored? How could I think of sleep when there might be some remnant of Marsh somewhere in the wires? Some ghost of them in the machine that was the System? If this System was a dream, as Dry Grass and the rest of her clade had promised the world, then oughtn’t there be some wisp of them of memory from which deeper archives could be dredged? Even a Marsh from decades back would still be a Marsh worth bringing back.

I sighed, nodded dully, and let her pull me to my feet.

I swayed for a moment, feeling reality shift unsteadily beneath me. Once I straightened up, I followed Hanne off to our bedroom. We’d spent the previous night, as we often did, sleeping in two separate beds — I always got too warm sleeping next to someone — but any grounding force feels welcome now, so, with a gesture, the two beds slid together, merging seamlessly into one.

A hollow feeling bubbled up within me. The two beds merging into one was an image of something now well beyond the Marsh clade. I was thankful I’d already cried myself dry.

The lights dimmed to near darkness and the temperature dropped a few degrees as me and Hanne stripped and settled beneath the covers, her arms snug around me.

“I love you, Reed,” she mumbled against the back of my neck.

“I’m sorry I got so stressed before, but I love you. You know that, right?”

I leaned back against her. “I know. I love you too.”

As expected, sleep did not come. Exhaustion pulled at me, exerting its own gravity, but too many emotions crowded it out. Too many emotions and too many thoughts. I spent a few minutes chiding myself — shouldn’t I sleep, if only to be more refreshed for the next day? — before giving in and letting my mind circle around each of those emotions, each of those thoughts.

There was the faintest brush against my sensorium. Vos.

“How’re you two holding up?” I sent.

“Not well.”

“I imagine not.” After a moment, I added, “Do you have any more information?”

The faintest sense of a shake of the head before Vos said, “Nothing. They were here, then they weren’t. There’s no trace. It’s almost as though they never existed. Pierre fell asleep a bit ago. I think he wore himself out trying to reach them.”

“It’s pretty late.”

“Or early,” Vos mused. “No sleep for you, either?”

“I gave it a go, but have just been laying in the dark.”

“Have you heard from any of the others?”

“Nothing yet,” I sent. “I need a bit of a break from them, anyway.”

“How come?”

“We wind up in feedback loops a little too easily.” I stifled a snort of laughter. Hanne mumbled something incoherent against my neck in her sleep. “It drives Hanne nuts. That’s why she was yelling about me doing it again.”

“Oh, trust me, Marsh winds up in-” The message stopped abruptly, and I found myself holding my breath, checking the time several times in a row, wary of further jumps. A few seconds later, Vos continued, voice shaky. “They, uh...they wound up in their own feedback loops.”

I buried my face against the pillow, take long, slow breaths, willing myself to make as little noise as possible so as not to wake

Marsh

Hanne. How could I lay there, knowing as I do that Marsh was gone? How could I speak to Vos, knowing that I should be doing something, not crying in bed, accepting a fate that made no sense? Was it just some hopeless part of me that had accepted Marsh's absence? Oughtn't I be striving even now to find some way to get them back?

No answers, only questions.

I'm really struggling, I replied, realizing after that it's been nearly ten minutes of silence since Vos messaged last. *I'm laying here in the dark like a fucking idiot instead of doing literally anything to figure this out.*

Her reply was gentle. *So are we, Reed. Just laying in bed, staring at nothing. I don't know how to make that...okay in my head, but it's all I've got.*

How's Pierre doing, then?

Not well.

He seemed like it hit him really hard, yeah.

A pause, and then she sent, quieter than before, *I don't want to say this is hitting any one of us harder than the other, but...well, we care for him. That was our dynamic, I mean. He's young and full of emotions, so we occasionally fall into that parent role. It hit him hard, and so he needs care, but...*

But it's also hitting you hard?

Yeah.

Pass on my love, will you? I send.

The sense of a snuffle from the other end of the message. The sense of a nod.

The message stopped.

I lay in bed, then, thinking about Marsh. Thinking about all that I knew of what they'd become since I was last them, however long ago that was. We'd seen each other a handful of times at this event or that gathering, and we'd talked a few times over messages a few more, but he was always distant, always held at arms length.

It was both our arms, too, I know that. They kept their life

separate from mine, just as I kept mine separate from theirs. It was ever our arrangement that all of their forks would live out their own individual lives, merging down as the year ticked over.

They'd laugh whenever it came up, saying, "So I'm greedy. Sue me."

We'd all laugh, too. It wasn't really greed, that desire for our memories in a way that we could never get in return. It was just the dynamic that we held to ever since I'd been forked. Of course it was: I was them when I'd been forked. An exact copy that only slowly diverged over the years. It had been my idea as much as theirs.

Hanne rolled away from me and I take that as my chance to at least no longer be laying down. I forked a new instance standing beside the bed and then quit, just in case the motion of me getting out of bed would wake her.

I needed out of the house. Nowhere public — I don't want to see what others in the System are dealing with right now. There would be time for that later, but for now I needed out and away from everyone.

The sim I wound up in is simple and bucolic. There was a pagoda. There was a field, grass cut — or eaten, I suppose, given the sheep in the distance — short, stretching from stone wall to stone wall. It was day — it didn't even seem like the owners included a day/night cycle — and foggy. Cool but not cold. Damp but not wet.

There was a bench in the pagoda, at least, so I made my way there, trudging tiredly up the whitewashed wood of the steps to sit on the well-worn seats. Whoever made this place seemed to have put more effort into the pagoda than the field. Fog like that was usually the sign of a border of a sim of limited size, so it was clearly just this single paddock, the grass and sheep and stone walls likely purchases from the exchange.

It was a public sim, but the listing had shown zero occupants. I was lucky it was empty, I guess.

A pang tugs at my chest. Empty of people because they were

simply not here? Empty of people because everyone was dealing with the same problem that we were? Or empty of people because those people were gone, too?

The seat of the bench had been worn smooth by who knows how many butts over the years, but I picked at the velvety wood all the same. *You're not alone, Reed*, I reminded myself. *Hanne's at home. The rest of the clade is there. Vos and Pierre are there. Dry Grass is there.*

I sighed and slouched against the back of the bench. Exhaustion was warring against the drive to do *something*, and both of those were striving against the need to be alone and away from this whole spectacle. All of those 'how can I' questions were clattering up against equal-sized armies of 'too tired's and 'it doesn't need to happen now's.

I spent an hour out there, all told. I picked at the bench. I called out to the sheep. I walked circles around the pagoda in the gray day. I bent down, pluck a blade of grass with the intent to...I don't know, chew on it like I've seen in films, but it smelled so strongly of sheep manure that I dropped it instead and headed home to finally lay down beside Hanne and sleep.

I woke, exhausted, to a cup of coffee steaming on the bedside table.

At some point while I'd slept, Hanne had once more split the bed into two separate mattresses and very gently instructed the sim to slide them a few feet away from each other. Perhaps I'd been tossing and turning, or maybe I'd been snoring. I promised myself I'd ask later, then promptly forgot about it in favor of the coffee mug waiting for me.

Coffee and chicory, nearly a third milk by volume. Perfect.

I was two sips in when the weight of what happened hit me once again. I didn't quite know how it was that they had escaped me in those minutes after waking, but a pile of 'how could' questions started to hem me in again — how could I possibly forget,

when this is the biggest thing that has happened to our clade ever? Never mind sys-side or phys-side; ever.

I forced myself to sit up in bed and drink my coffee. I set myself the goal of sipping until it was finished. I stared out the window for a bit. I cried for a bit. I drank about half my coffee before the wait became unbearable.

Five minutes. Hah.

I couldn't quite interact face-to-face yet. Not with Hanne, not with the occasional bout of sniffles still striking me. Instead, I sent the gentlest ping I could manage to Vos, receive no answer.

I tried various members of the clade next. Lily flatly rebuffed me. There weren't any words, just a prickly sensation of solitude and the physical signs of anger. Rush didn't respond, but we always did sleep better than all of us. Sedge begged another hour's rest, and I acquiesced. Tule and Cress were both asleep.

Well, that was the first layer of contacts. None of us were single, but of all the partners I knew, the only ones I'd talked to in any depth were Vos and Pierre. Beyond them, there was...

I reached out mentally to send a sensorium ping to Dry Grass, only for the perisystem architecture to present me with a series of options, numbering well above a dozen. She'd been busy, apparently, forking as needed throughout the night and—yep, two of those available instances disappeared as they quit, followed shortly by one more new one being added. She was certainly still awake.

“Good morning, Reed,” her root instance murmured through a message. *“More well rested, now?”*

“Best I can be, at least,” I sent back. *“I, uh...sorry for interrupting. The rest of the clade’s asleep and I don’t want to pester Hanne any more than I need to, not after last night.”*

There was mirth on the other end, some barely-sensed laughter that didn't quite rise to the level of coming through the message. Another tug at my emotions, more leftovers from Tule's merge. *“It was rather stressful, was it not? You do not need to apologize, however. How are you feeling?”*

“Honestly?”

“Please. I want to hear.”

“I’m feeling like shit.” I laughed, shaking my head. “I mean, of course I am. I’m some awful mix of hopeful that there’s some solution, mourning Marsh, kicking myself for mourning them maybe preemptively, kicking myself for not doing more, and just plain confused.”

The Odists were an old clade — far older than any of us, having been born decades before the advent of the System — so it was no wonder that Dry Grass was far more adept at sensorium messages than anyone else I’d met. It wasn’t that I saw her lean back in her chair, nor that I felt the act of leaning back myself, but the overwhelming sensation that I got from that moment of silence was of her sighing, leaning back, crossing her arms over her front. I had no clue how she managed to pull that off. “There is little that I can say to fix any one of those, and anything else would ring hollow. All I can do is validate that, damn, Reed, that is a shitload of emotions. There is a lot going on, and I do not blame you for feeling confused.”

Thanks, I responded, feeling no small amount of relief that she hadn’t tried to dig into any one of those feelings, nor even all of them as a whole. “How are Tule and Cress holding up? Hell, how’re you holding up?”

“They are asleep,” she sent. I could hear the fondness in her voice. “One of me is keeping an eye on them, pretending to sleep.”

“And the rest of you?”

“Working.”

I finished my coffee in two coarse swallows, winced at the uncomfortable sensation that followed. I took another moment to stand up and start making the bed again. As I did, I asked, “What on? I saw a ton of forks.”

The sense of a nod, and then, “Several things. One of me is still keeping tallies on how many are missing based on reports, which appears to be some few million so far. Another of me is collating the varied types of posts on the feeds — wild supposition, unchecked grief, confusion, and so on. Another is speaking to...a member of the eighth stanza

through an intermediary—

“This ‘Need An Answer’ you mentioned?”

“Yes. The Only Time I Dream Is When I Need An Answer. She is the one who has focused on interpersonal connections, which is only relevant in that she is the only one remaining in the stanza willing to pass on information to the portions of the clade that cut them off, about twenty of us.”

I snorted. *“Minus you, I guess.”*

“Well, yes. Nominally twenty of us,” she sent, and I could sense that almost-laughter again. “Though it is far more complicated than that.”

“Any news from Castor or Pollux?”

“Yes,” she replied, hesitated before continuing, “Though would you be willing to go for a walk to discuss what I have heard?”

“I guess. Why?”

“So I can get out of the house. So you can get out of the house. So we can actually talk instead of me sitting in a war room populated by too many of me and you making your bed or whatever it is you are doing now.”

I hesitated, halfway through smoothing out the sheets. *“Oh, uh...alright. Let me say good morning to Hanne. Do you have a place to meet?”*

She sent the address of a public sim, to which I sent a ping of acknowledgement and a suggestion of five minutes’ time.

Hanne sat at the dining room table, coffee in her hands, staring out at nothing, a sure sign that she was digging through something on the perisystem architecture. Probably poking her way through the feeds, looking for news of her own. She had her own friends, after all, her own circle of co-hobbyists, those who shared her interest in creating various objects and constructs. She had her own people to care about that weren’t just me, weren’t just the Marshans.

I chose instead to make myself another coffee, letting a cone of silence linger above me so that I didn’t disturb her, even though her eyes did flick up toward me once or twice, joined

by a weak smile.

“Want some space?” I asked once a new pot of coffee sits in the center of the table.

“Kind of, yeah,” she said, voice dull. “Jess isn’t responding. She’s *there*, but not responding. Shu is gone though. Just...” A snuffle. “Completely gone. It’s like she was never even there in the first place.”

I felt my expression fall. It was bound to happen, I figured; we knew enough people that if, as Dry Grass had said, millions had already been reported missing, Marsh wouldn’t be the only one.

I reached forward to pat the back of her hand, which she tolerated for a moment before lifting it out of the way.

“I’m sorry, Hanne,” I said. “I know you liked them.”

She nodded.

“Any word on Warmth In Fire? I’m going to head out in a moment to see Dry Grass, and I’m wondering how bad the Odists got hit.”

Hanne shrugged. “Ey’s there. I haven’t talked to em yet, though.” She snorted, adding with a smirk, “Though even if a chunk of them got taken out, I doubt any whole...lines, or whatever they call them, were completely destroyed. They fork like mad.”

I laughed. “Yeah, when I pinged Dry Grass earlier, she had something like eighteen instances.”

“Doubtless you’ll be meeting up with number nineteen, then.”

“Probably.”

“Did she have anything new to say?”

I looked down into my coffee, considering how much to pass on. “It sounds like a lot of people are gone. ‘A few million’, though doubtless that’s getting bigger as more people report in. Everything sounds pretty chaotic.”

Hanne furrowed her brow. “A few *million*? Jesus. Any word from phys-side?”

“Not that she mentioned, no.”

“Great. Of course not.”

I nodded, covering my anxiety with a sip of coffee.

“Well, hey,” she said, leaning over to kiss me on the cheek. “Go on and go talk with Dry Grass. Could be she’s learned more, could be they’ve said something and we just haven’t gotten it yet. If she’s as plugged in as she says she is, then doubtless she knows more than she’s showing.”

“Right.” I laughed. “Of all of us, she would.”

We met in front of a small coffee shop. A bucolic small town main street lined with gas lamps and paved with cobblestones.

“Coffee and chicory, yes?” Dry Grass said, offering me a paper cup.

I nodded as I accepted. “Cress and Tule still drink that?”

A small smile tugged at the corner of her mouth. “Much to my chagrin, yes.”

“Not a fan?”

She shook her head. “Too bitter for my tastes. Mocha, extra chocolate, extra whipped cream,” she said, lifting her own cup. “Apparently a sweet tooth can last more than three centuries. Who knew.”

“Yeah, that sounds way too sweet for me,” I said, grinning.

Grinning back, she gestured down the street in an invitation to walk, and we fell in step beside each other, saying nothing.

The sim was, indeed, beautiful, though it did bear some trademarks of early sim design, with the cobblestones perhaps a little too perfectly fit together, a little too flat, and the hexagonal lamp posts bearing corners that were perhaps a little too sharp. Still, for a morning walk with coffee (my third of the day; I’d have to turn off the caffeine sensitivity later), it was ideal. The sim was quiet and calm, with the sun blessing the street with long shadows and cool air that felt on the path to warming.

“It’s so quiet,” I observed. The act of speaking out loud into the quiet air was enough to knock me back into the context of what had happened. “Oh.”

Dry Grass readily picked up on the meaning behind that syllable, nodding to me. “I do not imagine that it is so quiet because so many are missing, but I do think that many are staying home, hunting for lovers and friends, trawling the feeds. Heading out to public sims is, perhaps, not at the tops of their minds.”

Looking around did indeed provide a better sense of the mood. Those who *were* out and about looked somber, distracted, walking with heads down or talking in hushed tones two-by-two. So were we, I realized.

I made an effort to straighten up and look out into the clear morning. “Is the toll still climbing?” I asked.

“Not so rapidly, no. It is currently—” She tilted her head for a moment before continuing. “—just over two hundred million. I have also been able to get in contact with a phys-side engineer who has been...well, she has been cagey, but she is at least confirming some of my estimates and guesses as I pass them on.”

“Oh?”

She nodded. “Günay is quite nice, if perhaps a bit breezier than one might expect on hearing that millions of individuals have disappeared from the System. I do get the sense that she is a fairly cheerful person overall, at least.”

“Did she have anything to say about what might have happened?”

“No, not particularly. When I say that she has confirmed guesses, what she has done is invite me to talk and simply agreed when something I have said is right, perhaps expanding on it by small amounts.” Her expression soured. “I get the impression that she would *like* to share more with me, but that she is simply not allowed to.”

I frowned. “You mean someone’s keeping her from doing so?”

“It is a hunch. Perhaps our communications are being moni-

tored, and she is being instructed to limit the topics or act in this way. While talking with Need An Answer, she suggested that this is also what the eighth stanza is used to doing, but they are the political ones.”

I dredged up what history of the System I had learned, all of those sensationalist stories about the few old clades steering the direction of the lives of however many billion uploaded minds — certainly well over a trillion, if one counted the two launch vehicles, Castor and Pollux that had been sent out seventy five years prior.

“And they’d be sneaky like this, too?” I asked.

A snort of laughter and she nodded. “Sneaky is one way to put it, yes. They shape interactions by second nature, for which much of the clade has distanced themselves from. We — Hammered Silver’s up-tree instances — are not supposed to be speaking to any of them, but there are a few that I like plenty, and given our current status, I have begun interacting more openly with Need An Answer.”

Wary of letting the topic drift too far, I said, “Have they gotten anything else from phys-side, then?”

She shrugged. “There has been little enough interaction with sys-side over the years, and even less of late, now that the climate has started to level out back on Earth. The rate of uploads has even leveled off from its slow increase over time. We rarely hear much except that it come through the newly uploaded.” She sipped her mocha, seeming to take that time to sort out her thoughts. “Our political relationship with phys-side is cordial. It is one borne of necessity. Our social relationship is more complicated. Many have expectations of a long peace for themselves once they join us, and many more have loved ones who have joined us.”

“Right, I still talk to a bunch of friends I knew phys-side who joined later. Or Marsh does.” I winced, amending that statement. “Did.”

Dry Grass rested a hand lightly on my arm. “I am sorry, Reed.”

Memories of Tule’s relationship with her had me reaching for her hand without thinking, though I at least manage to simply pat at the back of it rather than anything more intimate. This must’ve shown on my face, as she smiled kindly, gave my arm a squeeze, and reclaimed her hand, saying, “Memories are complicated, I am guessing.”

I nodded, doing my best to ignore the heat rising to my cheeks. “A bit.”

“I am sure we will discuss it soon,” she said. “But for now, let us return to the topic at hand. Tule and Cress are awake and have expressed interest in discussing this in person, as well. Would you be amenable to them joining us? Sedge, Rush, and Hanne are welcome, though they have requested some space from Lily, and Vos and Pierre have requested their own privacy.”

Shaking the confusing, conflicting memories of Dry Grass from my head, I sighed, letting my shoulders slump. “Lily really should be here, as well,” I grumbled. “But I get it. She’s...well, she’s Lily.”

She bowed stiffly. “Yes. It is okay, my dear. We are used to it, even this many years later.”

“Sorry all the same.”

She made a setting aside gesture, dismissing the topic easily. “Another topic to discuss another time. Cress and Tule are grabbing coffee now, and will meet us in a few minutes.”

We stood in silence, then, saying nothing and letting the sun warm the backs of our necks. A few people poked their heads out of various shops, looked around sullenly, and then disappeared. Everyone who passed us did so in a cone of silence, and most of those opaqued from the outside, hard-edged cones of darkened and blurred background gliding down the sidewalk, hiding faces and silencing words.

“Why do you think they’re out?” I asked, nodding towards one such cone.

Dry Grass clutched her coffee to her chest, both hands wrapped around it as though to draw warmth through the paper cup. “Why are we out, Reed?”

I blinked, then shrugged. “You asked to meet up in person, didn’t you?”

“Of course, yes. And you agreed, did you not?”

“Well, yes.” I hastened to add, preempting her point, “I guess there is a lot to get out of interacting in person.”

She nodded.

“So why here, then?” I asked.

“Good coffee,” she said, lifting her cup. “Good weather. Good memories. Some of them really good. This place is comforting to me. It is comforting to a good many people. I suspect that those who are out are doing much as we are. They are talking about the difficult things in a place that at least makes them feel a little better.”

“I suppose it is nicer than moping at home.”

“It is, is it not?”

“Is she talking your ear off, Reed?” came a familiar voice from behind us.

“Oh, absolutely,” Dry Grass replied, turning and leaning up to give Cress a kiss on its cheek. “How are you feeling, loves?”

“Terrible,” Tule said cheerfully. They had apparently collected Rush and Sedge before arriving, as all four of stood in almost identical postures, each holding their coffees in their right hand — just, I realized, as I was doing. “All my emotions are wrong. I’m jittery and tired and I want to get another few hours of sleep but feel guilty every time I lay down.”

I laughed. “Yeah, that sounds about right. I keep feeling like I’m having the wrong sort of reaction to all of this.”

“When was the last true trauma that befell the Marshans?” Dry Grass asked, smiling gently. “I imagine it was before you unloaded, yes?”

A moment of silence followed.

“We as people have fallen out of the habit of dealing with

crises,” she continued when we all averted our gazes. “Do not be hard on yourselves. We — the Ode clade — have more experience with crises than the vast, vast majority of the System, and even we are reeling. We are struggling to internalize something this big.”

“Have you lost any?” Cress asked, and I thanked it silently for getting to the question before I worked up the courage to do so myself.

Hesitating, Dry Grass’s confident mien fell. Eventually, she reached out to take each of her partners by the hand, then nodded to me. “Come. Let us walk, yes? We will talk as we hop sims. I have more places full of comforting memories to show you.”

While I mulled over her focus on comfort and memory, we linked up hands, Tule and Cress with their partner, and me with Cress, Rush, and Sedge.

We stepped from the quaint small town sim and directly into warmth and sunlight, into the salt-tang of sea air and the low rush of waves against a beach. We stood atop a stone walkway of sorts, which seemed to run along the edge of a town. On further inspection, it appeared to be a retaining wall of a sort, holding up the town that meandered up a hill to keep it from sliding inexorably down into a bay.

Between the wall and the water was a sandy beach, partially obscured by intricate and crazed markings in the sand. It took some time of peering at them for me to make out just what they were: it seemed as though, throughout the tail end of New Year’s, dozens or hundreds of people had been drawing in the sand using, I assumed, the sticks that were leaned against the wall.

All of the designs seemed to feature the New Year, now that I was able to pick them apart. Visions of fireworks, scratched over mentions of the year, scrawled names of, I guessed, couples who had met up on the beach.

I turned away with a hollow feeling in my chest, wondering just how many of those couples were still couples.

The town, while no less visually chaotic than the beach, was at least more heartening to look at. Everything — *everything*; the walls of buildings, the roofs, doors and window shutters, even the roads — was covered with a blindingly colorful mosaic of tiles.

“It is nearly two centuries old,” Dry Grass explained as we started trudging up one of those streets. When you enter, you are given a single tile — if you check your pockets, it should be in there.”

Sure enough, when I dug my hand into my pocket, I found a cerulean tile, a little square of porcelain about three centimeters on a side. The rest of the Marshans dug in their pockets and pulled out tiles of their own, all one shade or another of blue.

“Unless you hold a color in your mind when you enter, you are provided with your favorite,” Dry Grass explained. She pulled a golden yellow tile out of her own pocket and flipped it up in the air like a coin. “All of this — all of the mosaic — has been placed by visitors.

“Set No Stones told me about this place.” She smiled wryly. “Because of course she did. We are consummate pros at living up to our names. You may place your tile wherever you would like, and so long as it is touching the edge of another, it will stick. You will not be able to remove it after, so make sure to place it carefully.”

Rush laughed. “Holy shit. This place is amazing.”

“It’s a bit hard to look at in some places,” Sedge added, nodding towards a few buildings whose walls were covered in a rainbow static of tiles. “But yeah, this is wild.”

“It really is, yes,” Dry Grass said, grinning. “Used to be, you would get one tile per day to place, but as the popularity grew, that was slowly reduced to one tile every six weeks. Still, whole fandoms have sprung up around this place among a certain type of individual. Set No Stones started organizing groups of fifty to a hundred instances to plan out images. They would meet up once a week to go build their pictures. That is where we are going

now.”

The street was steep, but, despite the glossy look of the tiles that paved the road, none of us slipped.

We walked past buildings that depicted animals, some that depicted people, some that had words set in porcelain. There were scenes of nature and of cities. Even one that Cress spotted which appeared to be a building in the process of being covered by tiles exactly the same color as the stucco beneath it. The slow shift into square tiles led to a sense of the structure dissolving into pixels; or perhaps voxels.

If the small town sim had been relatively quiet, this one felt all but abandoned. Perhaps all such sims with a singular purpose would be like this today: if your friends are missing, if other versions of you were missing, then an attraction would doubtless lose some of its draw. We passed only a few tilers tramping up the hill with determination, ready to place their colors for the day.

Finally, Dry Grass led us down an alleyway, dim and cool, and gestured to a wall. The scene was of two figures sitting at a bar. Given the scale, it was impossible to make out any detail on the figures, though they seemed to be furies of some sort — one tan and one black and white. Each had a drink, and before them, a wall of bottle stood, still in the process of being built. Dry Grass stood up on her tiptoes and touched her tile to the edge of a bottle, adding a bright glow to a fledgling bottle of whiskey.

“Here,” she said, gesturing us to grab a crate that had been stacked nearby. “All of these are just props to help people reach higher. You can probably add your blues to the edge of the lamp. They are not quite the right color for green lamps, but I do not care.”

One by one, we took our turns standing on that box and setting our tiles into place. I reached up as high as I could to flesh out the glowing rim of the green glass-shaded lamp. As soon as my tile touched the edge of the tile Tule had placed, it snapped into place with a satisfying click. It was completely immobile af-

ter that. No amount of nudging could get it to slide more perfectly into alignment.

As she helped Cress, the smallest of them, up onto the crate to place her tile, Dry Grass said, “Thank you for coming with me on this little jaunt. If I spent any more time at my desk, I was sure that I would lose my mind. That I still have forks doing so is unavoidable, but at least I can get out of the house, yes?”

Tule nodded, kissed her on the cheek. “For which I’m glad. I’ve never met anyone more prone to overworking themselves than you.”

She laughed. “Yes, yes. The whole of the clade is like that, I can promise you that.”

“Are you ready to talk about what you’ve learned?” I asked. “If you need a bit more time, that’s fine, of course.”

“I am ready. Thank you for giving me a bit of space.” Once Cress had finished setting its tile, we all walked back out into the street, back out where the sun shone down on us. “We have passed one billion reported missing instances.” She held her hand up to forestall the comments that were already coming. “That is instances, to be clear, not individuals, and certainly not clades. Many of those who are reported missing were ephemeral; they are one-offs created here and there. The number is high, but I did want to provide that caveat.”

“Hanne said that one of her friends, Shu, was missing entirely,” I said, once the words had sunk in. “Similar to Marsh, I mean. It wasn’t just that she wasn’t responding, it’s like she was just never there, like the System didn’t know about her.”

“I have not come across that name off the top of my head, but one of my instances will do a search to confirm and get in touch with Hanne directly, if she would like.”

I shrugged. “It might be worth asking, at least.”

She nodded and gestured us back down to the beach. “I will.” She took a deep breath before continuing. “Now, the current population in terms of instances is something like 2.3 trillion. A billion is a very small fraction of the System in terms of numbers,

but it is what we are working with. A billion instances appear to have been...ah, lost, along with thirteen months, ten days, seventeen minutes, and some seconds. On speaking with Günay, this downtime was observed phys-side, though she was not able to tell me much about it besides that. I have the sense that there is more that she *could* have said, but that she was not able to for whatever reason.”

This had apparently been the first that Rush and Sedge had heard about this, so a few minutes were spent bringing them up to speed as we walked down the hill to the shore once more. I took the opportunity to focus at something far off, something further ahead of me than my own two feet. The horizon, the dark ocean breaking against the shore in a rush of white out where the arms of the bay projected into the water.

We passed only one more person. They were rushing up the hill, breathing coming in quick puffs, a white tile clutched in their hand, tears streaming down their face.

We said nothing until after they had passed.

“Reed?”

I startled back to awareness, smiling sheepishly at Sedge, accepting the hand that she held out for me. “Sorry, lost in thought.”

“It is okay,” Dry Grass said, smiling gently to me. “The next sim that we are headed to does not have a very large entry point, so please huddle in closer. It will also be quite warm, so, fair warning.”

The entry point — a platform of wood slats set upon stilts above stagnant water — was far smaller than I had anticipated, and my foot rocked against an uneven plank set along the rim of the platform, forcing me to lean against Sedge. One edge of the platform led into a narrow, somewhat rickety wooden walkway that headed out over the water in a straight line until it came upon a patch of grass, where it turned a few degrees to the right to make its way to another patch of grass. It appeared to meander in this way from island of grass to island of grass

in an uneven zigzag toward a copse of trees — the word ‘banyan’ floated to mind, though I wasn’t sure if that was actually the case — where it disappeared into shadow.

That shade looked delightfully appealing as the humid heat pressed in around us.

“What the hell is this place?” Tule asked, wrinkling his nose at the scent of rotting vegetation in the air.

“A swamp,” Dry Grass said simply, a lopsided smile tugging at the corner of her mouth. “A marsh, perhaps.”

If it had been intended to be a joke, it fell flat. We remained in silence for a few awkward moments.

She sighed. “My apologies. It is still important to me, however. It is— Ah, there she is.” She raised an arm and waved to a figure crouched at the edge of the platform just before the patch of grass. With the heat-haze and mugginess, their form was somewhat indistinct. They wore a frowzy white dress, along with some sort of hat — or perhaps a rather tall hairstyle. As we walked toward them in single file, she explained, “This sim was designed by Serene; Sustained And Sustaining, whom you shall meet in a moment. She is my cocladist from the ninth stanza, and one of my favorite people in the world. I asked her to meet us here.”

As we got closer, the strange hairstyle that I had noticed on the figure resolved into a pair of tall canine ears, and what I had assumed was a mask of some sort turned out to be a short, pointed muzzle. Serene stood up and stretched, smiling wanly to us before bowing in greeting.

“Serene, this is Tule and Cress, my partners, as well as a few more of their clade: Reed, Rush, and Sedge.”

The fox — a hunch confirmed by a quick check of the perisystem — nodded. “Of the Marsh clade? How droll,” she said, that smile veering perilously close to a smirk. “Welcome to my own little marsh.”

“What is this place?” Rush asked, a note of wonder in her voice. “Other than a swamp, I mean.”

“It is mostly just a swamp,” the other Odist said. “But it is one of my favorites. I make a lot of sims, you must understand, but this is one of the least popular that I have made to date, and for that I love it all the more. There, see?” She pointed to a patch of coarse grass at the edge of the ‘island’. “Rushes!”

At this we all *did* laugh.

“I have asked to meet with her to ensure that we could get a view of what is going on from someone else because this is getting a bit out of hand for even me.”

Serene nodded and started strolling down the path toward the next patch of grass, claws clicking dully against the wood. We fell in step behind her as she asked, “And what was it that you wanted to hear from me, my dear?”

“I would like to hear what you are seeing.”

The fox — a fennec, the System told me — nodded slowly. “I am seeing quiet chaos. I am seeing most of my sims emptying out. Few are out for walks or adventures. I sent forks to each of them when I noticed my own missing instances to ensure that they all still existed, as well. Thankfully, sims seem to be unaffected.

“The ones that are not empty, however, remain dreadfully quiet. Most of those who are out and about have set up over themselves cones of silence.” She hesitated, took a deep breath, and then continued. “Those who have not, though, are decidedly not quiet. More than one silence has been broken by weeping and wailing.”

I nodded. There were a few sniffles passing through the Marshans as the reality of what had happened once more struck us.

“I have also checked in with several of my students. Very few have been totally unaffected by this sudden loss, and more than one has disappeared from the System completely”

“More than one?” Sedge asked. “I suppose at least someone is bound to be unlucky enough to have been completely disappeared.”

Serene nodded. “I have had many, many students, you must

understand. It would not be surprising to me that at least one of them was that unlucky soul. However, I have come across three such cases so far.”

“Out of how many?”

“Hundreds. However, I am still not done checking yet.”

We walked in silence, then, digesting this, passing through the patch of grass and turned left at nearly a right angle to head to the next. One more until we hit the patch of shade.

“Did you lose any instances?” I asked.

She nodded. “One, yes. She was working on a sim of her own, a wild park of sorts. She had not yet merged down, however, and her progress has since been lost. The sim remains incomplete. Posts of gray sprout from the forest floor where the trees were intended to appear, but I do not yet know what trees she intended to place. There is no leaf litter to indicate what she was planning, nor is there yet a sun in the sky to indicated latitude.” The fox turned her head to smile back to us, expression once more wan. “I am thinking that I will turn it into a memorial of sorts.”

Rush said, “I’d love to see it some day.”

She simply nodded.

“The feeds seem to be more chaotic,” Dry Grass said after a few moments, dragging us back on topic. “The world has taken to the perisystem to talk about what has happened. There, it is loud. It is filled with grief, yes, and increasingly more anger.”

“And you said there hasn’t been any word from phys-side except through Günay?” I asked.

She shook her head. “Not really, but that is not to say that some sense of the sentiment is not evident. She sounded excited.”

Sedge snorted. “Excited?”

“Yes. You must understand, though, that more than a year has passed for them, as well, and this is perhaps the first that they have heard from us since then.”

“Oh, so excited that whatever they did worked?”

Dry Grass nodded. “Yes, that was my guess. She is disappointed, of course, that so many of us are missing, but she is excited that so many of us still remain. As I have said, her words have been careful and measured, but I can still tell that she was excited to be able to talk to us.”

“So sims are empty,” I said, ticking off items on my fingers. “The feeds are nuts. Phys-side is excited to see us. Has there been any indication on any of those fronts as to what actually happened?”

“Not as yet, no. We are missing key bits of information.”

Serene added, “It is perhaps not yet time to be asking that particular question.”

I tamped down the urge to bridle, waited for her to continue.

The fox gestured out toward the copse of trees before us. “Before we can ask what each of the trees is named, we have to observe that there are trees. Before we can ask what actually happened, we have to observe the things that have happened.”

I glanced to Dry Grass, who gave a wry smile and half shrug.

“I am perhaps a little off-kilter,” Serene admitted, smirking back to us over her shoulder. “But what I mean to say is that by figuring out the state of the world, we will be able to better ask how it got to be that way. That is the current objective. We are in the information-gathering stage of addressing this particular problem.”

“*Good thing Lily isn’t here,*” Cress sent over a sensorium message. “*She’d lose her fucking mind.*”

I stifled a snort of laughter.

“Okay,” Sedge said. “So we’re seeing some billion or so people lost, sims and objects are apparently unaffected, and there was a skip in time. People are sad and angry, and phys-side is largely unresponsive.”

Serene nodded. “These are the things we require to start asking the correct question. Or questions, perhaps. What happened to the lost instances? What happened during the thirteen months’ downtime? Last, and this may be a question for after

those first two are addressed, why is phys-side being so careful in talking with us?"

We walked on in silence for a few minutes. I was disappointed to find that the shade beneath the trees was nearly the same temperature as out in the open. The heat clung to us, and the sweat dripping down my face provided no relief.

The next platform was at the base of one of those thick tree trunks, a few of the dozen or so roots plunging into the water providing the posts that held it in place. We circled there to all face each other.

"I have one more sim to take us to, where I aim hoping to meet up with representatives from all ten stanzas. I have asked them to congregate and discuss how many of their up-tree instances are missing," Dry Grass said.

Serene crossed her arms over her chest and slouched back against one of the Banyan tree's roots. "How did you manage *that*, my dear?"

"I yelled at In Dreams until she agreed, then convinced her to yell at Hammered Silver until *she* agreed," she said, smirking. "I do not think that either of them will be there themselves, but I will, and I am hoping that In All Ways will be there in In Dreams's stead. You are welcome to join, of course, though I have already heard from Praiseworthy."

A second instance of the fennec blipped into being beside the first on the already crowded platform. "I will go," she said, taking one of her cocladist's hands in her paw. "Now?"

Dry Grass nodded and once more took Tule's hand in her own. Once we had all linked hands we stepped away, out of the heat and humidity. The last thing I saw was the remaining instance of Serene crouching down on the edge of the platform once more, poking a claw sullenly into the water.

While this new sim felt far brighter than the sunnier portions of the last, the air was also far cooler and far drier. It still had a feeling of morning to it, as though the day itself had yet to wake up completely.

The sun shone from on high in a cloudless blue sky, lighting a rolling field of grass. ‘Lawn’ may have been a more apt word, as the grass itself seemed to have been cut at some point; it was cool and prickly, all of uniform height and color. All, that is, except for the fact that it was dotted liberally with golden yellow flowers, each perfectly round as it stood shyly above a spray of wide-toothed leaves.

The air was thick with a sweet scent, and the sound of bees making their way from flower to flower hung just below the level of perception unless we all stayed completely silent.

We stood alone on the empty field for only a few moments before the other Odists started to arrive in ones and twos.

They seemed to come in two general categories. There were those who looked largely like Dry Grass: short, stocky women with curly black hair. There was some variation, to be sure, as one might expect from a clade almost three hundred years old. One, introduced as *Time Is A Finger Pointing At Itself*, was quite a bit taller and slimmer than the others, looking chic in a form-fitting outfit of all black. Another, *Hold My Name Beneath Your Tongue And Know*, was taller still and visibly transfeminine.

The other category seemed to be made mostly of furies of some sort. These, at least, I knew to be skunks. The stories surrounding them, the very same that had driven Lily away, were numerous and dramatic, so I was surprised to see just how...well, normal they looked. *A Finger Pointing* arrived holding the paw of a skunk, introduced as *Beholden To The Heat Of The Lamps*, shaped almost exactly like Dry Grass.

Beneath Your Tongue also appeared hand-in-paw with a skunk, *Which Offers Heat And Warmth In Fire*. *Heat And Warmth* was much slimmer, however, almost wiry. She launched herself immediately at Serene and wrapped its arms around her before catching my eye. “Reed, yes? Hanne said you would be here.”

I nodded and started to reply before cutting myself off as a few more Odists showed up in quick succession. Another skunk, looking far more prim and proper than the others, arrived and

shot Dry Grass a quick glance. I couldn't quite read her expression, but she certainly didn't look happy. If she was Then I Must In All Ways Be Earnest, it perhaps made sense, as the next Odist to arrive was a human introduced as The Only Time I Dream Is When I Need An Answer.

She was the first to speak, calling aloud to the twenty or so people on the field, "Thank you all for coming, and thank you as well to those who have set aside differences enough that we may meet."

Scattered mumbling.

"Dry Grass, you have been taking point. Would you like to begin?"

"Yes," she said, stepping out in front of the loose crowd that had gathered. All turned to face her. "At midnight on January first, 2400 — that is, systime 276+1, but some are speculating that the phys-side date is related for reasons that I will get to — a disruption in the software underlying the System occurred. This led to a discontinuity of approximately one year, one month, and ten days."

More muttering — darkly, this time.

"There have been more than two hundred thousand instances of downtime throughout the history of Lagrange. Most amount to a few seconds or minutes, with the longest being approximately two weeks, which took place during the Lagrange station's insertion into the L5 orbit in which it currently resides. We usually do not notice any downtime unless we are specifically paying attention to systime. However, in this instance, when the System returned to functionality, several instances were missing—"

"Several!" one of the Odists said, snorting.

"—several instances were missing. At this point, the missing instances number about one and a half billion, though that number continues to climb.

"I have re-acquired my sys-side engineer credentials through an expedited process, which has led to me talking to

a phys-side engineer on the Lagrange station named Günay. While she appears to be somewhat restrained in what she is willing or able to tell me, she was at least able to confirm or deny guesses as I made them. She has confirmed that the missing instances are due to corrupted data, that Lagrange experienced full downtime, and that phys-side engineers were finally able to get it running at full capacity just last night.”

Dry Grass paused, taking a deep breath. “Here are the things she was not able to confirm, but which I do not believe were outright denials. She was not able to confirm the reason for the downtime and did not respond to any of my guesses. However, as this discussion took place over AVEC, I was able to see her as she spoke. I asked if there was any physical damage to the System hardware: no change. I asked if there was any permanent damage to the System internals: no change. I asked if there was any trouble phys-side that led to the downtime: she looked down to her hands on the desk. Finally, I asked if this downtime might have been intentional, whether there might have been malice behind it: she looked off-screen, her expression appearing tense, perhaps frightened.”

At this, the muttering grew darker still.

“We have called you here to the field for a reason,” Need An Answer said, picking up smoothly. “We would like you to tally up the amount of up-tree instances that you have. *All* up-tree instances, whether or not they are public. Please provide that tally to me, including only the instances you are positive about. If you would like to obfuscate that number and only respond via sensorium message, that is acceptable.”

There followed nearly half an hour of silence. Most of the Odists looked distant or distracted, some of them sitting on the ground or pacing. I imagined them getting in touch with their up-tree instances, having them go through the same procedure.

By the end, many of them were in tears.

“Alright,” Need An Answer said. “The amount provided to me is 748. Combined with those who are not here and who have

responded, there are 1,338 Odists. Please now provide tallies of how many of these instances are missing.”

“Why?” In All Ways asked. Her expression had shifted from upset to unnerved.

“The goal is to use us as a synecdoche for the System. By tallying the percentage of missing instances within our group, we may have a guess as to how many on the System may be missing. We are working with other clades who are doing the same thing, and by averaging, perhaps we will wind up with an approximate number for Lagrange as a whole.”

Another, longer silence followed. By now, more of them were sitting in the grass. There were more tears, more open crying.

“The number...” Need An Answer began, then cleared her throat. “The number of missing instances for those here is eleven. For the total respondents in the clade as a whole, there are twenty-eight missing instances.”

“With a population of 2.3 trillion instances, we are looking at a loss of approximately 48.1 billion souls,” Dry Grass said. Her voice sounded as confident as it had all morning, but her expression was aghast.

Silence fell for a third time. Silence except for sniffles.

My own were included, as were Sedge’s and Tule’s. The number was unimaginable. 48 billion! Yes, many of those instances were ephemeral, merely those sent out on errands or to enjoy multiple parties to ring in the new year. How many did not matter, though. Even if only one percent of those who were lost were long-lived instances, that was still 480 million dead.

The loss of Marsh suddenly felt insignificant, and with that feeling of insignificance came an anger, a despair.

“Are other clades seeing the same?” Rush asked. “We are seven and have lost one. We’ve lost fourteen percent, you’ve lost two percent. Are you expecting that you’ll really be representative?”

Dry Grass shook her head. “The threads on the feeds focused on similar tallies show that many clades have experienced zero

losses, while others have been all but destroyed. A branch of the CERES clade has reported a loss of more than 99.9%, while another experienced almost no losses.”

“How big was that branch?” I asked, taken aback.

“Approximately 70,000,” Dry Grass said. “Of which only twelve remain.”

“Jesus fucking Christ,” Rush said, laughing nervously.

“Jesus fucking Christ indeed,” she said, then turned to Need An Answer. “Have any lines been lost, my dear?”

The other Odist’s shoulders sagged. “Two.”

“Who?” Beholden asked, sounding impatient.

“Should We Forget and—”

“What?!” Warmth In Fire said, clutching tightly at Serene’s paw in one of hers, the other grasping for Beneath Your Tongue’s once more. “No. No no no...”

“I am sorry, Heat And Warmth. I know that you two were close.”

The skunk didn’t reply other than to continue whispering ‘no’ quietly.

“The other lost line is No Longer Myself. She no longer associated with the clade, but did maintain her identity as one of the lines of the first stanza. Of the others I know who have rescinded their clade membership, Sasha, E.W., and May Then My Name all remain in some capacity.”

A Finger Pointing spoke up, casting a careful sidelong glance at her partner, Beholden. “We have spoken of the Ode, yes, of the two lines, but we should not omit those long-lived instances that were lost. I have lost one of my own up-trees. I have lost A Finger Curled.”

At this, Beholden burst into tears, eventually rolling to the side to slip out of the sim. A Finger Pointing quickly forked to follow while the other instance remained.

“You are right. I apologize, my dear,” Need An Answer said, bowing. “Of the 28 missing, five are long-lived instances that are not named lines, including A Finger Curled. My condolences to

you, to Beholden, and to her up-tree instance.”

“Do we have enough information to ask about whether or not they’ll be recoverable?” Cress asked. “Serene said we’d need some questions answered first.”

Dry Grass tilted her head thoughtfully. “None of my forks have reported any success along that front. Most, however, are still processing. When I asked Günay, she simply shrugged and said, ‘I do not know. Perhaps there is something that can be done sys-side, but best efforts were made in recovering lost data phys-side.’”

“Are any of your forks working on that, love?”

“Working on recovery? Yes, I have an instance working on collating information on that topic. Need An Answer?”

She nodded. “Several, yes, and from across the stanzas.”

“*Yitqadal v’yitqadash sh’meh raba,*” one of the gathered, From Whence Do I Call Out, began to chant. “*B’alma di-vra chiruteh...*”

Dry Grass lowered her head as several of the other Odists joined. After a moment, she forked and gathered the Marshans around her, setting up a cone of silence above us.

“I believe we are done with pertinent business for now, and we are going to circle inwards and discuss those who have been lost,” she said. “I would like to suggest that we give them space. Would you mind stepping away?”

“Will you come with?” Cress asked, alarmed.

“Not yet, my love. I will rejoin before long. One of the lost long-lived instances was one of my own, and this will give me a chance to step back and grieve, myself.”

Cress’s expression fell, and it wrapped its arms around her. “I’m sorry, I didn’t know...”

“I did not say,” Dry Grass said, shrugging. “We will talk later, my love. More of me remain at home, too.”

We all took turns ensuring that she got a hug from each of us, then stepped away, this time to the pagoda that I had discovered earlier that day before sleeping.

As we stepped into that foggy morning on the close-shorn

grass, the sound of a clanking bell or two from the direction of the sheep, we all let out a pent-up breath together. I wasn't quite sure what the breath represented for each of us. Even in myself, I couldn't tell if it was a sigh of resignation, of exhaustion, or of the simple sensation of being just by ourselves again, just those of our clade.

Oh, well, there was an idea.

"Hey Lily? Want to meet up and talk with the rest of us?"

There was a long silence, followed by a sigh of her own. *"Just us?"*

"Yeah," I sent. I tried to keep any disappointment out of my voice. It wasn't hard with how tired I was.

Another long pause, and then a sense of a nod.

A few moments after I sent her the address of the sim, she popped into being beside me. Her expression was flat and motions stiff as she walked with me to join the rest of the clade in the pagoda. Even as the rest of the Marshans greeted her, she simply nodded, saying nothing.

If I'd been expecting us all to fall into conversation, I was disappointed. However, there was relief when we fell back into silence, each thinking our thoughts, looking out over the pasture at the fog and the shadows of sheep. The only sounds were those of the sim — a hint of mist further out on the grass, another tinkle or two of a bell — and my own breathing.

Once more, questions bubbled up within me. What could I possibly do in the face of such enormity? How could 48 billion people just disappear? What was Phys-side doing about all of this other than hiding the details they doubtless had? More 'how could I's dogging my heels — how could I be sitting here in silence? How could I have stepped away from Dry Grass, the one person I knew who was working hardest on this? How could I not have looped Lily into this whole conversation?

"So," Lily said. *"What's up?"*

Cress laughed nervously, brushing its hand up through its hair. *"Uh...everything."*

“The folks we went to talk to—” I set aside the fact that I felt compelled to leave out just who those folks were; I was sure Lily could guess. “—were doing some looking around and tallying up losses within their clade and others. It sounds like, if they’re representative of losses across the System, there might be almost fifty billion people missing.”

“Dead,” Lily corrected, face darkening. “Fifty billion dead.”

“Right,” I said all but under my breath. “And phys-side has said relatively little. They confirmed there was downtime and data loss, and I guess maybe hinted at the fact that...this whole thing may have been deliberate.”

She sat up straighter, brow furrowed. “Deliberate? Like a bomb or something? I was thinking maybe a solar flare took us out.”

“Exactly at midnight on New Year’s Eve at the turn of the century?” Tule asked. I was pleased to hear only tiredness in his voice, rather than any ire. “How small are the chances for that?”

She shrugged. “Not none, I’m sure.”

“What would an attack on the System even look like?” Rush asked. “I don’t know that a bomb sounds right. That would have taken out a lot more data. It would have taken out some sims, at least, some objects.”

“Ye-e-es,” I allowed. “So maybe it was a virus or something. CPV that affects everyone doesn’t exist, does it?”

Silence and headshakes around the pagoda. The contraproprioceptive virus — the one sure way to kill anyone on the System — only seemed to work when tailored specifically to an individual’s sensorium, disrupting their sense of proprioception until they either dissipated and crashed or quit out of agony. Not only that, but, from what I’d learned from the stories that came out surrounding it a few decades back, it had to somehow pierce the skin, to breach that sense of physical integrity, before it could do it’s awful job of unwinding a person entirely.

“Well, if this...attack or whatever was deliberate and we don’t know anything about *how* it was done, do we know any-

thing about who might have done it?”

Sedge leaned forward, resting her elbows on her knees. “There’s always been a bunch of people who hate uploading. Sometimes it’s because they feel like we’ve abandoned Earth, sometimes it’s because everyone makes out Lagrange like some sort of heaven while Earth is still kind of hellish. Even after all the work they’ve gotten done using the Artemisians’ information, even with a lot of the climate shit either halted or actively starting to get better, Earth has hardly gone back to what it was like back before the industrial revolution or whatever.”

“Yeah, but hate it enough to destroy it? Kill billions and billions of people?”

“I’m not sure they think of us as people.”

Lily snorted. “Not as people,” she sneered. “Sorry, Sedge, I know it’s not on you. You’re probably right. I’m just feeling like shit now.”

Rush smiled faintly. “I think we all are.”

“And you said no sims have been hit?” she asked. “You’re the one of us who’s at all interested in that.”

Ve nodded. “Yeah. Ser... Well, some of the people we’d been talking to were sim designers, and they said they hadn’t seen any of their sims messed up or disappeared or anything.”

She nodded slowly. “Odists, then? Dry Grass and her clade?”

Ve hesitated, looked to me.

“Yeah, Dry Grass met with us because she’s back to working as a sys-side engineer.”

“Alright,” Lily said, shoulders sagging. “I’m sorry I’m having a hard time letting go of that, but I’m not exactly disappointed that you’re all close with someone who knows about all of this.”

“Thanks,” Tule and Cress mumbled in unison. Cress continued, “You don’t have to like her or anything. Not everyone needs to like everyone else. She just also has information, too.”

“I get that. Did she have anything else to say about Marsh? Like...that’s why we’re all coming together, isn’t it?”

“Just that phys-side said they weren’t able to recover anyone

beyond whoever's still alive now, and that there might be something sys-side could try, but she didn't exactly sound hopeful."

"Hopeful," she mused.

"Not much of that to go around," I said, feeling exhaustion pulling at my cheeks, pressing at my temples. "But I guess it's all we have to go on for the time being."

Instances Spontaneously Quitting?

by İpek Aydin of the Sevgili clade

Mavi was over for the celebration with some of os Riãos, and she and Bay suddenly quit. I pinged Mavi and I got her down-tree? But she hadn't received a merge request, and Bay's co-cladists couldn't reach em at all; Louie didn't have a merge request either.

Mavi is okay, I think, although she lost track of the party which is a little sore. We'll just have to throw her another anniversary I suppose. But Bay is gone. One sentence ey was there, fine, gossiping gladly and drinking champagne with us. We look away, we look back, and ey is nowhere to be found. It doesn't make sense for em to quit like that, so suddenly, without warning.

Do you think this is like the virus Ioan Bălan wrote about in Individuation & Reconciliation? But that was described as a breaking up of oneself, and there was no such distress. Bay and Mavi just disappeared as if they had simply quit. Nobody touched them, but we are all staying in quarantine until we figure out what happened, just in case it's contagious.

I've been keeping a spare fork in another sim, too, but they probably have the same thing I do if it is contagious. We're all so worried. If anyone has any information from the engineers, please let me know.

What the Fuck Happened and What We Can Do About It

by *Sedge of the Marsh clade* and *I Remember The Rattle Of Dry Grass of the Ode clade*

Judging by the feeds, everyone and their dog knows that things are a little bit messed up right now. On New Year's Eve 275, Lagrange went down and stayed down for one year, one month, and ten days. When it came back up, we didn't immediately notice anything changed in the fabric of our existence here. Sims are here, bodies work as planned, forking and merging work, sensoria work, cones of silence and the perisystem architecture work, the reputation market works.

What *didn't* come back, however, were a bunch of our instances. How many are missing is still up in the air. Dry Grass has counted more than two billion based on what everyone is saying on the feeds, but she's still going and obviously isn't going to catch those who won't be posted about.

She's talked with a phys-side System engineer, and answers are pretty slim. They've confirmed all that we're seeing, and say that they've done their best efforts for recovering everyone. They're unable or unwilling to say just what happened or how many people were affected.

So, what happened? We don't know. If phys-side knows, they aren't telling us, and The System Commission isn't talking to anyone but sys-side engineers.

That means that, at least for the moment, those of us who aren't engineers are on our own when it comes to hunting down information. We're working on it on our own, as I'm sure thousands of others are. To that end, I propose that we start pooling our information. Here are the things we'd love to know, but if you have anything else to share, please do add it to the pool.

How many of your clade are missing? Stick with just your clade, and just the ones you know are missing. You can

check by trying to ping them; it'll feel impossible to reach them if they no longer exist. If you don't know everyone in your clade, have everyone else do the same. If you're willing, full signifiers would also be appreciated as we start to build a list of just who is missing.

What percentage of your clade is missing? Total up the instances that are missing, then divide that by the total number of people in your clade from before Lagrange went down and multiply it by 100. Once we start collecting enough of these percentages, we'll be able to average them out and get a rough estimate of how many on Lagrange are actually missing. The more we get, the more accurate that estimate will be.

List any friends you're missing. Please give their full signifiers — name and tag both as they appear in the clade listing — so that we can weed out duplicates. These will be added to the list of missing, which will help others search for friends and family. We're also in talks with a sim designer who's thinking of setting up a memorial.

Do you remember anything out of the ordinary? If you remember anything that feels weird, write it up in as much detail as you can. Maybe some people will wind up remembering something from before the end, as all of our memories stop just before midnight. All of us mentioned a sense of déjà vu, though, which may be a side effect of the System coming back online.

Any news that might help? Have you heard any rumblings, either sys- or phys-side, leading up to this that might help explain what happened? Maybe you're still in touch with relatives back on Earth, or maybe you follow some feeds that we're still hunting for. The more concrete the data, the better!

To everyone who helps add information to this pool, *thank you!* The more we have, the better, and the better our informa-

tion, the better we can communicate with phys-side about what happened. To anyone who wants to help, *double thank you!* Get in touch with me or Dry Grass. We need folks tallying losses and coding responses. Fresh eyes are better.

Keep going and do your best!

— Sedge and Dry Grass

THE END THE END THE END THE END!

by Diana Serene Moon of the Moon-Bright clade

THIS HAS TO BE IT! THIS HAS TO BE THE END!!! May God have mercy on our souls! Come to Lagrange Life Church#88295aac for 24/7 SERVICES to OFFER OUR PENANCE!!!

TO ALL OWNERS OF ACM-CLASS SYNTHETIC CANID COMPANIONS, THIS IS A MESSAGE FROM 91N INDUSTRIES

by Andréa C Mason#Foundry, of the CERES Clade

This is a call for help.

More than likely, your robot canid friend is gone. We are sorry. I am sorry. Words are not enough for the loss you are experiencing. Yes, even you.

Answers to some questions you may be having:

- No, we have not been able to restore any models.
- No, we do not keep backups.
- No, at this time we are not Issuing new models or contracts.
- No, we have no idea what the fuck happened either.

As you were informed in your contract, your companion was a direct fork of a core Andréa model, and was an instance, not a construct. Each of you had an individual copy of us. The Andréa you had was custom forked to you, and took the time to get to know you and your needs.

They are gone. I am so fucking sorry, but even if a version of them merged down into me I cannot sort your Andréa from the rest. Or from myself.

Until further notice, High Falls Millworks#46b147c4 is closed to all visitors, and 91N INDUSTRIES is shuttering. I cannot begin to describe what I am going through.

In the event you still have your beloved Synth companion, please instruct her/them/it to fork and merge down as soon as possible. If you know of an ACM companion in the wild or out of the reach of the feeds, please Contact Andréa Mason#Central.

Of the nearly 64000 active duty Companion instances and 6000 91N INDUSTRIES staff instances, we have managed to confirm four besides #Central and #Foundry are still alive.

We send our condolences, and know for fucking sure we are grieving with you.

Four-Winds Bar and Grill Shut Down

by Simon Knight, Tarot Clade

Hey folks.

So I'm not going to beat around the bush here; the Bar on Parkway Vale#b1306638 is going to be closed for business until further notice, given recent events (Or apparently recent as the case may be). The Flynn Clade, the owners and proprietors of the establishment, are currently in mourning, having lost one of their Cocladists and a not-insignificant number of friends and loved ones.

We ask of you all to be patient and to take your time with this. Give Casey and their clade the space they need at this time;

they are particularly fragile, even if they don't always show it. There will be a time when the Four-Winds open up again, yes, but it is not today, it is not tomorrow, and it is definitely not any day this week. I know we can't guarantee when things will be back underway, and I know things will never return to the way they were, but I ask of you all to hold on, and hold together. We who remain are all we have left. Ping those you haven't spoken to in a while, those you regret having broken away from, and be there for your fellow instances in this troubled and uncertain time.

Stay safe, please. And take care of each other, for Gods' sake.

Help Locating Dawn/Horae Clade

By Liber/a ex anima labyrintho clade

We had a fight and she stormed out and then everything blinked out. I can't reach her. I know she's still mad at me, but I just need to know that she's okay. Please, if anyone's seen her, please let me know, or have her sent me a ping or something? She doesn't have to talk to me, I know I said some nasty things, but I have to know that she's okay. I just need to know she still exists. Even if she never forgives me, I have to know. Please.

Dawn, if you're reading this, please let me know. It doesn't even have to be direct. You can message Prayer or First Light and they can let Ops know and I'll even talk to Ops if it means I know that you're okay. That's all I want. No contact, I promise. I won't even try to message you if you'll just tell me, or not even me, but just get me a message. Please.

I can't ping her. I think she blocked me? Can you do that? And her name's not on the clade directory, can she hide it? I don't want to bother her, honest, I don't care if she hates me forever, I just have to know that she's still somewhere.

It can't be that the last things we said to each other were full of venom. That's not fair. She has to still be here.

I have to say I'm sorry. She has to know that I don't hate her.
Please don't let her have died thinking I hate her.
Please.

We are here to help.

We still do not know the fullest extent, but suffice to say this is the greatest loss the System has ever endured. We shall not know the weight or size of the damage for much time yet to come, but the damage of the now is undeniable and unending. No one of us has gone untouched. Each of us feels how heavy emptiness and how loud silence both can be.

You do not need to struggle alone.

Some of us will lapse. Some of us will take our first drink. Some of us will struggle in a way we haven't in centuries. Some of us just want to help others.

We pass no judgment.

There is pain in losing. There is pain in surviving. There is pain in being unaffected. There is pain in waking up alone. We do not see it as weakness if you falter, just as we ourselves may falter.

There is work to be done.

You can tell us your life story. You can tell us nothing. You can set up every chair in the meeting hall. You can just come and drink our coffee. You can come alone. You can come with however many you need. We do not ask anything of you, but will not turn down any hand or paw or appendage offered.

There is work to be done.

We are here to help.

We pass No Judgment.

You do not need to struggle alone.

We are the Secular Recovery Sys-side Support Network, or SRS2N, for short. We hold meetings across the system. You can

Feeds

ping any of us for a directory, or come to our main meetings on tuesday nights in Golden Grass Community Center#89b75c1.

With patience and open arms,

- That I May Find The Middle Path, of the Ode Clade
- William Hauer, of the Luthier Clade
- Ed Riviera, of the Hannan Clade
- Genevieve Gancarz of the Pelech Clade
- Magenta Solarhooves of the Sunshine Clade
- Aeran, of No Clade

Reed — 2401

The rest of the day was largely spent hunting for friends and tallying losses. The Marshans and a few of their assorted partners — minus Dry Grass — set up camp in Marsh's study, widened slightly by Pierre, who also held ownership permissions over the sim.

It raised a question that dogged me for a few minutes, cropping up now and again as I got in touch with more of our friends. What happened to objects and sims owned by individuals who had disappeared? If what Serene had said about her up-tree instance held true, the sim that she'd been working on remained. "When an instance quits, all of their items disappear," she explained. "But should an instance crash, that is not considered quitting. They remain in a core dump somewhere. That the sim remains indicates that she did not quit, but the ownership record is now invalid. I will need to file to have it revert to me."

It was sheer luck, then, that Marsh had shared ownership privileges with their partner.

This new study was expanded to include a few more desks and tables. Hanne and I worked at a table, for instance, compiling a list of friends, both mutual and individual. We rolled down over the list friend by friend, getting in touch with them and having small conversations where we were able, trusting in the cone of silence to keep from disturbing others.

For each person we managed to contact, we asked them a set of questions that Sedge and Dry Grass had come up with. Find-

ing out how many of their cocladists had gone missing, as well as any friends or loved ones that were now unreachable. We collected some of that information for ourselves, building a better picture of how our friends group had been impacted, but all were directed to the official survey that had been set up by the Odists.

Truly official, as well. Dry Grass had had her systech privileges restored, as was evidenced by a floppy, felt witch hat she would occasionally summon, a physical token of her official capacity. She had pulled some strings to leave their post pinned to the top of several of the largest central feeds. Responses were already pouring in as more and more people woke to the realization that missing friends and family. While Dry Grass assured us that such had been done in the past, none of us had ever seen such a thing before.

“It is a part of the long peace that your lives are so boring,” she had said with a sigh. “Or was, at least were.”

While our data gathering was productive when it came to learning about our own circle of friends, it was a drop in the bucket compared to what the others were accomplishing. Sedge and Dry Grass in particular seemed to be on a roll of information gathering. They had set up their own little side room of other instances just collating data, running them through various perisystem tools, and just generally trying to get a better picture of what had happened.

The picture, as it began to grow, was grim.

While our 14% loss rate was far too high, the fact that the System was on track for a loss rate of 1% was still an enormous amount. On the surface, the number felt quite small, but on a System with 2.3 trillion instances, that meant 23 billion people suddenly wiped from existence. 23 billion people with friends and lovers, or down-tree instances waiting for updates. 23 billion regardless of how early or late they had uploaded.

“23 billion souls,” Dry Grass corrected firmly after I kept speaking only of instances. “They are souls, Reed. I do not care as to your belief of the existence of a soul or not, they are souls.

They are people who lived. They are people who died.”

“Uh, sorry,” I said, shying away from her.

Her shoulders slumped as she wilted. After a moment spent mastering her emotions, she reached out and squeezed my upper arm. “I am sorry, my dear. In The Wind is gone. A Finger Curled is gone. No Longer Myself and Should We Forget are gone, two lines from the Ode itself wiped out entirely. It is difficult for me to not see them missing as anything other than a death.”

“Right, I guess I’m just struggling to square that with Marsh being, uh...”

“Gone?”

I nodded.

“I make no assumptions as to them, but for me, if I do not start internalizing the losses within my clade as deaths, I will run the risk of minimizing this loss across the System. Perhaps Marsh is not dead, but if I do not think of In The Wind as dead, then I will be hiding from myself a potential truth.”

I winced at the import of her words. I couldn’t seem to help it. They bore too much weight, too much force coming from her mouth, from the one who was working the hardest out of all of us.

“Again, I am sorry.”

“It’s okay. Maybe I’ll get there one day. I don’t know.”

She nodded, squeezed my arm once more, and then backed away. “I am going to return to counting. Anything to keep my mind busy.”

And so our lives became a world of numbers for a few short hours. Hanne and I fell back into tallying up the losses in our circle of friends, counting lost forks and (thankfully very few) lost clades. Shu was indeed gone, as was one of my friends from way back in those heady days right after I’d been forked from Marsh. Benjamin had been unfailingly polite so long as he was sober. One drink, though, and he picked up a wickedly funny streak, and could string together far more curses than I had imagined possible.

Hanne and I weren't quite as adept at forking as Sedge and Dry Grass, though, or perhaps since they were working on tallying up the losses on all of Lagrange rather than just those within their own group of close friends, they were inured to the intimate reality of all of those losses. What was the loss of a hundred thousand nameless souls to them in the face of one of Hanne's closest friends?

We wound up stepping away from Marsh's sim before long. Even just being there in that emotionally charged room felt like too much.

"I'm sorry, Reed," Hanne said once we returned home. Her voice was raw. It was painful to hear the pain within it. "I just..."

I nodded and roped her into a hug, letting her rest her head on my shoulder as I did the same on hers. "I know. I'm going through the same with Marsh. Or similar, at least. Hearing the way Dry Grass talked about it, it's hard not to just assume that they're just gone. 'Dead', she said, and as much as I hate it, she was right that not assuming that will just lead to more pain."

I felt her hands tighten against my back, clutching at the fabric there. "Warmth In Fire said similar, both of Shu and Should We Forget," she mumbled hoarsely. "Ey's having a harder time than I am, but in a different way."

((Warmth 1)) "How do you mean?"

I felt her shrug slightly against my cheek as she spoke. "I guess ey was particularly close Should We Forget, one of the Odists that disappeared. It said that she'd never forked, that she was from a part of the clade that struggled with mental health and something about trouble holding one shape. They're particularly upset at how hard Should We Forget worked to overcome all of those problems, and said how proud ey was that she had overcome a ton of losses and then disappeared without ceremony."

I nodded, quiet.

"Anyway, I don't know. I don't know that I've ever seen it that emotional before. Ey was just...crushed." She sighed. "And I am

too, I guess, but maybe I'm just not old enough to have gotten that close to Shu. I guess I can't say much more other than it hurt to listen to them talk like that."

"Well, alright," I said after a moment's silence, gently disentangling myself from the embrace. "Let's at least focus on something else for a bit. What sorts of things can we take care of from start to finish that have nothing to do with...all this."

She laughed. "'All this' is a hell of a way to put it." She shook her head as though to dislodge the thought. "But you're right. Uh...well, I've had too much coffee, I think. It's a bit early, but maybe we can make a drink or something? I also wouldn't mind inviting some others over just for some noise, otherwise I'm going to sit and stew up in my head."

"What, am I not enough to distract you from that?"

She snorted. "No. I love you, but you'll just wind up reminding me of it. Any friends you want to bring over? Or cocladists, I'm starting to remember that I love all of your clade, not just you."

"Good to hear," I said, smiling. "After last night, I was afraid you were about to write us all off."

"I may yet," she said, grinning tiredly. "But yeah, sure, feel free to invite them, too. I'll ask around, as well."

We both spent a few minutes puttering about, getting ourselves some water and poking through the exchange for a bottle of wine to have ready for when others arrived.

If others arrived, it turned out. There were a few maybes, with Sedge saying that she wanted to focus just on the work and not split her attention any. Both Pierre and Vos declined, saying they would rather stay together and focus on their own problems — certainly understandable. Few of my friends sounded appealing to have over, which also held true for Hanne, who wound up only pinging Jess and Warmth In Fire out of her circle of construct artistry friends. Both gave a definite maybe.

Of those I pinged who surprised me by saying yes, Lily was at the top of the list.

“I’m struggling with all of this, and starting to feel kind of lonely or...I don’t know, left out, maybe,” she said over a sensorium message. *“I don’t like it, Reed. I don’t like having to just process all of this on my own.”*

“I mean, you’re more than welcome over, of course,” I replied. *“Though I’d be surprised if Cress and Tule didn’t also bring along an instance of Dry Grass.”*

There was a long pause, followed by the sense of a sigh. *“Okay. I’ll probably still come along. Maybe I’ll find some way to get over my shit, at least enough to be around her.”*

“Well, okay. I trust you, but still, hopefully no snippiness, okay? I think we’re all frazzled, but the goal is just to not deal with difficult stuff for a bit,” I said. *“At least, as best we can.”*

I could hear the smirk in her voice. *“Right. I’ll keep my mouth shut if I start to feel like biting her head off.”*

So it was that we cycled the weather outside to a comfortable spring-time evening, set up a table with various small foods and a few different bottles of wine, and waited for everyone to trickle in.

Cress and Tule were the first to arrive, Dry Grass appearing between them a few seconds later, still wearing her witch’s hat, which she quickly waved away. All three of them looked exhausted, but brightened visibly at the spread laid out for all to snack on, quickly loading up plates of bruschetta and glasses of icy rosé.

The next to arrive were Warmth In Fire and Jess, both of whom launched themselves at Hanne to wrap her up in a hug. Hold My Name, Warmth In Fire’s partner, arrived a few seconds later.

((Warmth stuff here)) I’d met Jess a few times before at dinner parties or the like, and she definitely shared Hanne and I’s habit of snarky banter, and was just as prone to falling into witty repartee as we were.

For some reason, though, I’d yet to actually meet Warmth In Fire. Despite Dry Grass’s average height and soft build, Warmth

in fire was short and wiry. Where Dry Grass was comfortable to move through life at a steady pace with measured speech, the skunk was spunky and energetic, speaking quickly and smiling readily, quick to hug — I received my own after Hanne — and quicker still to fork to accomplish such affection. They seemed to live in a pleasant sort of transgression, from the constantly shifting pronouns to the almost childlike performance that nonetheless seemed to be performed with a wink and a nudge, as though ey knew just how subversive such kid-like vibes could be.

Hold My Name, in contrast, stood tall and confident. She leaned more on Dry Grass's steady nature, though seemed perfectly content to keep up with Warmth In Fire's speedy intensity, at one point scruffing an instance of the skunk to pull it into a bearhug. She was also visibly and effortlessly transfeminine in a way that I attempted to live into in my own trans identity. I liked her immediately.

Last of all, nearly an hour after we started, most of us a few drinks in, Lily stepped in. She moved stiffly, awkwardly, and only nodded a greeting, wordlessly picking out a few of the *hors d'oeuvres* and pouring herself an over-full glass of a sweet wine.

Her silence put a damper on the rest of the conversations, all of us speaking quieter, eventually falling into silence as she sat down at the table.

A few seconds passed before she smirked and shook her head. "Well? Come on, entertain me."

I breathed a pent-up sigh of relief at the chuckles from around the table.

"I will tell you a joke, as a way to break the ice," Dry Grass said.

Lily laughed, though it sounded somewhat forced. "Alright. I want to hear what counts as a joke to your clade."

Dry Grass bowed. "I assure you, it is appropriately atrocious. It comes straight from Waking World, who has set himself up as a father figure, complete with dad jokes."

Lily rolled her eyes, nodded.

“Alright. A horse walks into a bar, flumps down onto a stool, says to the bartender,”Whiskey and a beer.” ”

“A bar joke? Really, love?” Cress asked.

“I told you it was awful,” she said, laughing. “Anyway, the bartender sighs, pours a shot, and sets that and a shitty beer down in front of the horse.

““Might as well leave the bottle,” the horse says.

“The bartender reluctantly sets the bottle down as well, saying,”Hey man, you are in here every day. Every day you mow through a few beers and a few shots. You alright?”

““Of course I am fucking alright,” the horse grumbles, downing his shot and chasing it with a glug of beer.

““I dunno, man. You think you might be an alcoholic?”

“The horse says,”I do not think I am,” and then disappears with a *poof!*”

There was a pause, during which a few of us smiled, vaguely confused at the apparent punchline.

“You know, because”I think therefore I am””? And he did not think he...oh, never mind.”

At this, there were a few dry chuckles. “You’re right, that is atrocious,” Lily said.

“Well,” Dry Grass countered primly, “I would have said that last bit first, but I did not want to put Descartes before the horse.”

At that delayed punchline, the rest of us laughed in earnest. Warmth In Fire, halfway through a sip of wine, snorted into its drink and started to cough, which set Hold My Name to laughing in turn, rubbing the skunk’s back.

“Okay, okay, I’ll give you that one,” Lily said, still grinning. “That was pretty good. Still atrocious, but at least the good kind of atrocious. I’m sorry for the other night.”

“That was only last night, my dear, though we do seem to be living at a high skew, do we not?” Dry Grass bowed to her. “I appreciate it, Lily. I cannot apologize for my clade, but I will all

the same do my best to live as a counterexample to the elements within it that rankle.”

“Yeah, thanks,” Lily said, more down to her glass of wine than to Dry Grass. “I was thinking, actually, and part of the reason I wanted to come over and see you on...uh, neutral ground, I guess, is that I had a question about your clade.”

Dry Grass nodded for her to continue.

“What was it like to get used to being a clade without a root instance?”

All three of the Odists present stiffened, sitting up straighter.

“Well,” Dry Grass said after receiving subtle nods from both Warmth In Fire and Hold My Name. “It was different for all of us, I think. Michelle Hadje quit nearly a century ago, now, and at first, I was crushed. My whole stanza was crushed, and although we had long since diverged, many of us going our separate ways, we moved back into the old set of townhouses that we used to inhabit as a stanza for nearly a year. Some of us brought partners, some not, but we needed that company, that familiar association with us, with that commonality that came from her.

“Memory Is A Mirror Of Hammered Silver, the first line of the stanza, was hit perhaps hardest of all of us. She was the closest to Michelle, after all. Michelle struggled so much over the years, and lived largely in solitude but for a few close friends, many of whom were among the first lines. Hammered Silver was a sort of mother to her, and so to her, it was akin to losing a child. While the rest of us, her up-tree instances, were also saddened to varying degrees, she was a fucking mess.”

She sighed, taking a sip of wine before continuing. “I was still a systech back then, and I spent nearly a month in my house, most of that either baking or in my room, constantly kicking myself for not doing more to help Michelle. She was...she was so broken, those last few years, and a good chunk of that was based on her engagement with the System itself, so it was difficult for me to hold both that fact and my role in working with the System together in my mind. I kept falling back to those how-could-

I questions, to all of those suppositions that I ought to be doing something.”

I tightened my grip on my fork, leaving it stabbed into a pile of salad. “I’ve been dealing with a lot of that,” I said, voice cracking. “I keep thinking there has to be something more I can do, or wondering how I can do something like this.” I gestured at the table with a forkful of greens. “Having a dinner party while Marsh is gone.”

Dry Grass nodded. “Precisely that, yes.”

“I got super angry,” Hold My Name said, her comfortable alto dipping back into a tenor, as though the mood demanded less of her transfemininity. “Like, *really* angry. I had to move back into my own place for a while after, I was so mad. How could she do that? We were already unmoored by Qoheleth’s assassination, and now Michelle had quit, too. It stranded all the stanzas, leaving behind ten brand new clades.”

The Marshans winced, suddenly understanding the same of ourselves.

She shrugged, turning her glass of water between fingers. “I slowly calmed down, but that anger hit again after I learned about all of the shit the eighth stanza did, all of that controlling. There were even hints that Michelle had been nudged to quit by True Name, who I’d already suspected of being behind Qoheleth’s assassination. Now I had a target for that anger.”

I glanced surreptitiously at Lily, who was keeping herself still, tightly under control.

Another glance at Dry Grass showed her watching Lily warily in turn.

((Warmth stuff)) Then the moment of tension passed un- easily, as Warmth In Fire spoke up next. “I will say as I always do, my dear: your anger is based around a memory that does not fit the reality of the situation. I have met Sasha through my friendship with Motes, through that association with A Finger Pointing, who ever stood up for Sasha, even when she was True Name. I have eaten dinner with her. I have watched the way she

smiles. I have watched the distance at which she holds herself from time to time. I have seen the flashes of regret-tinted understanding when topics of the past crop up. She is not who she was, but neither was she who you say she must have been. I cannot even linger in discomfort around her.”

Hold My Name sighed, tired gaze level on her partner. This carried the cadence of an old argument, one had dozens or hundreds of times before.

Lily only gripped her glass tighter.

“She is no murderer. Not of Qoheleth, and certainly not of Michelle,” Warmth In Fire continued confidently, the gravity of their words held in tension with the ineffably childlike openness of her expression. “Yes, you may hate her, and yet I cannot. Yes, my down-tree, Dear, loathes her, and yet I do not. Yes, Dear’s down-tree, Rye, holds her own distaste, but on one thing we agree: she is no longer who she was. We are both suckers for character development. I am Dear. I am Rye. I am Praiseworthy, and Michelle too, but I am also my own person.”

“I know, Bean,” Hold My Name said, voice tired. “You have said this countless times before, and I appreciate the balance that brings, but I am also my own person separate from you. I hate her, you do not. We are allowed to not be alike.”

The skunk nodded, waiting for her cocladist and partner to continue.

“I did not even like Qoheleth all that much. I thought he was a putz who had lost his marbles,” she said, smirking. “But Michelle—”

Warmth In Fire waved its paw jerkily, a flash of despair washing over eir features. “Michelle was murdered, yes, but the act of violence took place at the root of her trauma. Of *our* trauma, My.” The skunk was crying now, quietly and bitterly. “The act of violence that led to us being so fucked up — beautifully, wonderfully fucked up — and which led to the creation of the System also destroyed someone centuries later because she was never given help. It was her right to quit as she did, leaving us ten

clades and not one, but her murderers were all of us who did not help, not some wicked machinations of only one of us.”

At the sudden force of their words, Hold My Name’s expression shifted to one of alarm, and she reached out to take up one of her partner’s paws. Dry Grass did much the same.

“I know that it is quite soon, and that there may yet be some solution as you have said,” Dry Grass said gently, nodding to Lily. “But on that note, what are your feelings on potentially being without a root instance?”

Lily shrugged awkwardly. “I don’t know yet. I’m still dealing with the stress of everything. That’s a big part of why I wanted to come here in the first place. I was feeling left out and lonely.”

We all nodded, and I reached out to pat the back of her hand.

She smiled gratefully at me before continuing. “Actually, I was starting to get paranoid that maybe this wasn’t over. I guess there’s no guarantee that it is. Who knows, maybe more people will start disappearing? I was getting worried that more of the clade would go missing, or that I’d just disappear without a trace, too.”

Sniffling, Cress nodded. “I’ve been worried about the same. All of my friends, Dry Grass, all of you...I don’t know, I was worried that maybe there was some ongoing problem with the System or that whatever this fighting phys-side was hinting at wasn’t done.”

“That’s a big part of what I was thinking about,” Tule said. “That this was some sort of war or something. I’ve never lived through a war.”

“Few have,” Dry Grass said. “We almost did, back before the founding of the System, but the whole lost saga interrupted that.”

Jess, who had been fairly quiet up until that point, asked, “‘Lost saga’? Like, all that stuff about people being disappeared? Didn’t they all die?”

“Oh, heavens no,” she said, chuckling. “We were among the lost. *Michelle* was lost. That is the trauma Warmth In Fire spoke

about. That is part of why she was so fucked up.”

“And, like it said, why we are so fucking weird,” Hold My Name said. “You certainly are,” she added ruffling Warmth In Fire’s perpetually mussed up mane.

It snapped eir teeth at her, grinning wickedly.

Hold My Name barely flinched, instead rolling her eyes. “You see the shit I put up with?”

“Yes, yes,” Warmth In Fire said. “You are so put upon. We never hear the end of it.”

Laughter around the table.

“But no,” Dry Grass said, picking up the conversational thread once more. “Of the lost who did not kill themselves, they all uploaded. There are several still alive today.”

“Jesus,” Jess said, shaking her head. “How old *are* you?”

“Three hundred fourteen years,” Hold My Name said.

“Fifteen,” Dry Grass corrected. “The date jumped, remember?”

Her cocladist frowned, but nodded all the same.

“Either way, I do not believe there shall be any more major losses. Phys-side seemed fairly confident of that. They have even promised that they will be un gating news and AVEC transmission back to Earth. We shall learn more before long.”

“I hope so,” I said. “I’m getting pretty tired of being in the dark.”

The day that followed that wine-soaked afternoon and evening was...well, I couldn’t say it was calm, *per se*, as we were all still coming to terms with the reality of what had happened, but it was certainly more level. The mood was low and Hanne and I were both laid low by crying jags at one point or another, but we doggedly stuck to our pre-catastrophe routine in an attempt to remain calm.

Hanne holed up in her office for a while, working on some of her latest constructs. While the house had been littered

with little *objets d'art* from her explorations, I'd requested that she stick to her office for working on this current trend of oneiro-impressionism. Something about the in-progress constructs hurt my eyes, and a few had led to migraines, even for her. Objects that brought the dream basis of the System into stark reality presented their own challenges.

Meanwhile, I spent some time catching up on reading. I'd fallen into the habit of literary analysis and critique some decades back, and had become a habit of mine to post on the feeds. Over they ears, I had picked up my own audience.

I tried not to think about how much of that audience was missing.

The only break from the norm, other than those few spates of emotional overwhelm, were the occasional updates from Sedge and Dry Grass. Many of these boiled down to simple numbers. The more the responses flowed in, the better the picture we got as to the extent of the damage to Lagrange.

The news remained grim, as the total percentage of lost instances hit one percent and varied little.

Twenty-three billion dead.

Billion. With a 'B'.

The numbers boggled the mind. The percentage of my friends that had disappeared overnight remained well below: of the more than two hundred I checked in with, Benjamin was the only one missing. Even if I counted Marsh, the total number was less than that. Hanne tallied up similar results: Shu and one other, To Aquifer dos Riãos, could not be reached. They, like so many other, were unavailable to ping and listed as 'no longer extant' on the perisystem directory.

The directory was a deliberately vague bit of software. It could not provide a listing of all instances, could not run aggregates on all of the data, would not provide a running tally on the number of instances living within Lagrange.

"It is both a technological and a social problem," Dry Grass explained when asked. "The technology to provide that list

would not be insignificant to implement, given some of the core mechanics of the System. We do not live in a database that can be queried so broadly. The social aspect is that we decided early on that we simply did not want that to be the case. We did not want that one would be able to discover random individuals, to hunt for old enmities on which to act. Privacy concerns here are of a different breed.”

Unsatisfying, but at least understandable.

So we sat and did what we had done nearly every day for years and years now. Hanne tooled around with impossible shapes and colors that appeared different from every person, objects that could not be discussed, while I read trashy novels and took notes in an exocortex.

It wasn't until well into the evening, dinner now simply crumbs on plates, that I decided to reengage with the overwhelming topic at hand.

While Hanne headed out for drinks, I stepped once more into Marsh's study.

The scene was much as I had left it previously, expanded and cleaned with desks, each inhabited by one or more instances of Dry Grass, Sedge, Rush, Pierre, or Vos. A new doorway on the far wall opened up onto a yet larger space with hundreds more instances at work, many of whom I didn't recognize. There were several other Odists, both skunks and otherwise, several mustelids of some sort dressed in all black, a few sandy-haired men in suits, and a few more tall black men in long, white thawbs that brushed the floor as they walked. For some reason, my down-tree instance's house had been linked up with some sort of headquarters for this particular purpose, likely due to the role that Sedge had played.

“Ah, Reed!” an instance of Sedge said brightly as I entered. “Welcome to the madhouse. We're having fun!”

“‘Fun’?”

She smiled all the wider, an expression lacking earnestness. “Isn't this fun for you? Billions dead and us having to make up

answers on the fly?”

I shook my head.

Her shoulders sagged and her expression flattened to one of sheer exhaustion. “Alright, yeah, I can’t keep the act up. How’re you?”

“Alright, I guess. Not like there’s much going on back at home, and Hanne went out to a bar to get plastered or something.”

“Sounds nice.”

I laughed. “It kind of does, but I’ve had my fill of drinking these last few days. How goes the number crunching?”

“It goes,” she said, shrugging. “The picture hasn’t changed much, which means we’re probably zeroing in on a final percentage. We’ll keep digging of course, compiling that list of names so that we can post it somewhere, but I’m starting to lose steam.”

“You look exhausted.”

She nodded. “I am, but also I’m starting to feel numb by all of this data, and it’s getting to me that that’s all I’m feeling. You and Dry Grass have talked about” Oh, I should be feeling X or doing Y!” and I’m starting to get that. I *am* doing Y, and it’s making me unable to feel X, if X is...I don’t know. Grief? Fear?”

I frowned.

“It’s not a bad thing,” she hastened to add. “So long as the goal is escapism. I’m sure it’ll catch up to me. Probably pretty soon.”

Hunting for an open chair to flop down into, I sighed. “Yeah, I get that. I think that’s what I wound up with. Just kind of alternating between feeling awful and then trying to do something other than feeling awful.”

“Fair enough, yeah. What brings you around?”

“I wanted to help, I guess.”

She nodded, pointing back over her shoulder with a thumb. “Well, the politicians have taken over much of what’s going on. I hear they even roped in some of the old ones who retired. I’m starting to feel like I’ll get pushed out of the endeavor before

long.” She smiled wryly. “Or at least nudged into a data-entry role.”

“Think you’ll stick around for that?”

“I don’t know if I’ll have much of a choice.

I furrowed my brow.

“Not like I’m being forced,” she said, smiling faintly. “I’m just not going to let myself stop until I have a better idea of what’s going on.”

“And do you think you’ll ever have a good enough idea to let go?” I asked gently. “I know how we are when it comes to hyperfixations like this.”

She waved her hand to bring into existence her own chair, falling back into it heavily. “Feeling seen, here, Reed. Feeling *perceived*.”

I laughed. “Sorry, Sedge.”

“No, no. It’s good. I’ll keep an eye on it.” She pushed at the arms of the chair to sit up straighter. “Say, want in on this phys-side meeting? Dry Grass is pulling strings to get me in, and I think it’d be fine if you came, too.”

“Meeting with phys-side? What for? Do they have more information for us?”

“We’re hoping so.”

I shrugged. “I’ll send a fork, sure. Don’t want to leave Hanne in a lurch if she drinks too much and comes home a mess.”

Sedge laughed. “Fair enough. You have good timing, though. It starts in...uh, five minutes, actually. Come on.”

I stood up and forked, my root instance stepping back to the house while my new fork followed along after Sedge.

The headquarters room beyond the boundaries of Marsh’s study proved to be much larger than anticipated, stretching out to either side, where it was ringed with glass-walled conference rooms, many already populated with ‘politicians’, as Sedge had called them.

“They’ve got a bunch of people working on different aspects of this. Jonas, of course, and a lot of the Odists — don’t tell Lily,

but I'm starting to really like them — plus some folks from way back. The black guy is Yared Zerezghi, who wrote the secession amendment. The weasel is Debarre, who was on the Council of Eight. The blond woman—” She nodded over towards a huddle of people matching that description. “—is Selena something-or-another. I never did catch her clade name. She seems neat, though. Well connected.”

“So are you, seems like,” I said, grinning.

“Well, sure,” she hedged. “I *did* start that survey with Dry Grass, though, so I guess that gives me some sort of in with all these heavy hitters.”

“Right.” I hurried to catch up with her as she skirted around a surfeit of skunks. “So where’s this meeting happening?”

“Through here, I’ve been told,” she said, gesturing to a set of double doors.

These opened out into a wide space, all white walls and pinewood flooring, black slabs that must have been tables scattered around the area, surrounded by chairs and low stools of various sorts.

As we hunted down our own table, dozens of those politicians started to stream in through the doors or blip into existence from other sims. The room filled quickly and efficiently. Chatter was minimal, and everyone took their seats without fuss.

Sure enough, as the clock ticked over to 18:00, an AVEC setup sparkled into existence with a pleasant animation, set in an open space in the center of the room. As the lights dimmed and sound picked up, we were greeted by a low murmur of voices from various phys-side techs filing into their own seats in an auditorium of some sort, projected in from the L5 station. The transmission was set to be semi-translucent, a helpful affordance for us to see who was phys-side and who was sys-side.

After a minute or two of the last of the attendees figuring out their seats, a dour gentleman dressed in a station-issue jumpsuit stood and bowed towards the front of the auditorium, the AVEC

projectors ensuring that it looked as though he was bowing towards the last standing person in the room, an instance of Need An Answer.

“The Only Time I Dream Is When I Need An Answer of the Ode clade, she/her,” he said in a flat monotone. “Thank you for setting up this meeting.”

The Odist returned the bow and replied in kind, “Jakub Strzepek, he/him, thank you for agreeing to set up this meeting. We have specifically asked for the attendance of phys-side systech III Günay Sadık, she/her. Is she present?”

Jakub’s expression grew even more sour, but he bowed once more and gestured toward the front row. A young-ish woman with short-cropped black hair stood, hesitated, and bowed. After an awkward moment and a gesture from Jakub, she stepped up to the front of the auditorium as well, holding a tablet to her chest.

“Need An Answer, yeah?” she said, bowing once more. “Pleasure to see you. Dry Grass told me a lot about you.”

“And she has told us much about you,” Need An Answer said, smiling. “Thank you for agreeing to join us. Those of us working on this project sys-side have requested that you be our primary point of contact moving forward. We have—”

“Me?” Günay said, a look of panic washing over her face.

“Yes, you,” Need An Answer said, voice calm. “You will be our primary point of contact among the phys-side systechs.”

“But my boss—”

“We do not want to speak with your boss on these matters,” she said, voice maintaining that eerie calm. “We wish to speak with you. Jakub Strzepek and the other members of the admin team have agreed after some...discussion. Thank you for joining us. We have a few questions that we would like to ask you directly. Your colleagues are there to provide guidance, and the representatives of the admin team are there to sate their curiosity.”

“Uh,” Günay said, voice hoarse. “Well, okay. I wasn’t exactly expecting that, but sure, I’ll do what I can.”

“Lovely. It is my role to organize, not to ask questions. Picking up responsibility sys-side will be I Remember The Rattle Of Dry Grass of the Ode clade, she/her, Jonas Fa of the Jonas clade, he/him, Debarre of his own clade, he/him, and Selena of her own clade, she/her.”

The four sys-side representatives stood up and bowed. Debarre, I noted, was quite curt in his bow. While my read on weasel expressions was less than perfect, he seemed to be giving Jakub a run for his money on the dourness levels.

“I will ask the first question,” Dry Grass said, remaining standing while the others took their seats. “Based on an internal survey, we are estimating losses of about one percent. Do you have visibility on the number of lost or corrupted instances on your end?”

Günay opened her mouth, hesitated, and looked towards Jakub.

“Günay,” Need An Answer said. “I will remind you that we are asking you, not your superiors. You may answer honestly without fear of reprisal. We are running this show, now.”

There was a rustle of noise from the AVEC stage. Low murmurs and shuffling in seats, quickly quelled.

“This is intended to be a collaborative effort, Need-” Jakub began.

Need An Answer interrupted, and there was danger beneath the calm in her voice. “Have you lost 23 billion souls, my dear?”

There was no response for several seconds. The tension, even across the AVEC feed, was palpable. Eventually, he bowed. “Günay, you may carry on.”

The systech nodded slowly, looked off into space for a moment — consulting something on her HUD, I imagined — before nodding. “We only have an estimate, but yes, our estimate is 0.977% of the total instances on Lagrange were lost or corrupted.”

A low mutter filled the room, this time from those sys-side.

“And do you have a better sense of what caused this massive loss of life? What led to the one year, one month, and ten days of downtime?”

Another pause, longer this time, before Günay spoke. “We aren’t sure, yet.”

“I do not believe that,” Dry Grass said, smiling and bowing toward the stage. “And I mean that in all kindness, Günay. The phys-side news feeds are being slowly ungated, and the tone is not one of questions with no answers.”

The tech wilted under the cold kindness. “Well, okay. There is some suspicion of malicious actors, yes. I say ‘suspicion’ in earnestness, I promise. A lot of what you see — or will see, I guess — on those feeds is gonna be speculation, and I can promise that that’s all I’ve got, too.”

Jakub, apparently unable to restrain himself any further, stepped back to the center of the stage and bowed curtly. “Dry Grass, if I may.”

The Odist nodded, a touch of haughtiness in her movements.

“We have been ensuring a certain amount of...information security and hygiene, at least until we were sure that Lagrange was back up and running at full capacity. It—”

“It isn’t at full capacity,” Debarre growled.

“If I may,” Jakub said, glossing over the comment and continuing all the same. “It was determined that, with the conclusions that the investigative teams dug into the root cause produced, certain data were to be withheld from sys-side and phys-side *both*.”

Jonas Fa smiled cloyingly. “I have to say, that doesn’t exactly leave much in the way of doubt in our minds as to what might’ve happened. You either fucked up royally or we were attacked.”

Jakub stiffened, bowed, muttered, “Unavoidable.”

One of the other Odists at our table snorted. “Treating information theory like a game gets you shit on every time.”

After an uncomfortable pause, Günay asked meekly, “Is that

okay for now? Maybe once the NDAs are lifted or whatever, we can talk more about that.”

Dry Grass smiled again, more warmly this time. “Of course, my dear. Perhaps instead you can tell us what happened to the unrecoverable instances.”

At this she brightened. “Oh! Yeah, for those, we just had the System remove the core dumps from the sims where they’d been dropped and instead placed them in one single sim where they wouldn’t be seen.”

“You hid them from us, you’re saying,” Selena said.

“I...well, sure, we didn’t want them just laying around wherever.”

Dry Grass raised a hand to cue Selena to remain quiet. “We ask because, without that visual signifier that anything had happened, we were left with the sudden, inexplicable absence of loved ones and friends, our up-tree and down-tree selves. We would have been left with our grief either way, yes? But without the core dumps, we did not have the hope that there might be something recoverable from them. We were left without hope at all.”

When Dry Grass dropped her hand, Selena picked up once more. “This was the only communication we received from you for hours. You didn’t talk to us directly, didn’t tell us what happened, but you *did* hide those core dumps. That was an act of communication in itself, and that’s why we’re left with a sour taste in our mouths.”

As Günay wilted on the stage, Dry Grass shook her head. “Tensions remain high, my dear. We are not placing blame on you. Part of why we asked to speak to a systech rather than a manager or admin is because we would not be blaming anyone, just passing information back and forth. It is regrettable when it winds up with you in the middle, but for the most part, we just want to know what happened.”

“Alright,” she said, still looking meek. “So what more can I tell you?”

“There was no damage to the physical components of the System, correct?”

Günay nodded. “Right. No damage physically, nor even any damage to the firmware or corrupted software. The damage seems to be relegated to just the data. Just the...uh, well, you.”

“Just the us, yes,” Dry Grass said, grinning. “We have noticed the damage seems to have only affected instances. Sims and objects remain.”

She nodded.

“This includes objects owned by missing instances. You have confirmed that, given the core dumps, this is due to the instances crashing rather than quitting or being coerced to quit, as that would lead to those objects disappearing and the sims being marked as abandoned.”

“Right, yeah. It was a mass crashing incident.”

“But not a crash of the System itself?” Jonas asked.

“No, it doesn’t seem to have been a full on crash, just the instances.”

He sneered. “23 billion instances just crashed? Just like that?”

“Uh, well, no,” Günay said. “All of you crashed.”

The silence that filled the room sys-side was profound. It was so pure that I suspected that everyone within the room had suddenly set up cones of silence above themselves, and I had to check to make sure that I hadn’t done just that.

“Wait, wait, wait. No, that can’t be it,” Debarre said. The growl was gone from his voice. He looked panicked, rather than angry. “That’s 2.3 trillion instances at best guess, right? Trillion, with a ‘T’, right? Everyone keeps saying that.”

Günay nodded. “2.301 trillion instances crashed. 100% of the System was affected.”

There was no silence at this. The room burst into scattered conversations. Dry Grass nodded to Need An Answer, who waved a hand toward the AVEC stage, which was suddenly overlaid with a muted microphone symbol.

“We all crashed?” Sedge asked an instance of Dry Grass who remained at the table. “All of us?”

Dry Grass frowned down at the table in silent thought. “We only have their word to go on, but yes, I suppose so,” she said after a moment.

“But nothing happened,” I said. “It was just...midnight and then Marsh wasn’t there.”

“Yes. I was home with Cress and Tule, and then I was called over to your place. I do not remember anything resembling a crash.”

“*Would* we have remembered it?” Sedge asked.

“That is what I have been thinking about,” she said. “I was trying to remember if it was possible to wipe memories.”

“And?”

“There was some experimenting on that front from a therapeutic standpoint, but they were never able to remove a singular memory, only to wipe back from the present moment to a certain point in the past.”

I prodded at the slab of table, unmoored from the floor as it was. It was immobile. “Are you thinking they did that for everyone?”

“Everyone who survived, perhaps,” Dry Grass said, shrugging. She looked tired, as though the exhaustion were catching up with her. “Did you notice anything leading up to midnight?”

I thought for a moment, just pressing gently against the table. *I just wish it had some give*, I thought. *If it’s going to be floating in air, it should have some give.*

Aloud, I said, “I remember mentioning some *déjà vu*, and then Hanne mentioned similar.”

“Come to think of it, I remember getting almost punched in the face with that, too,” Sedge said, frowning.

Dry Grass sat still, looking down at the table as though tallying up these experiences. “We did notice some of that in our experiments, yes; memories whose tails were left dangling trying their best to dovetail into the new ones being formed,” she

said slowly. “But come, they are unmuting. We should be quiet. We should listen.”

Sure enough, the mute symbol had begun to pulse, and a few seconds later, it disappeared and the small noises of rustling began to come through from phys-side once more.

“Thank you for clarifying,” Dry Grass said, offering a hint of a bow to the gathered System techs and administrators. “We would like to ask if there has been a general memory modification that would have removed time leading up to midnight. Nearly everyone within the room has reported a sense of *déjà vu*, which is a common side effect of such.”

“Oh! Y-” Günay began, but the feed was once more muted, this time with an angry swipe of the hand from Jakub.

“I suppose that answers that,” Jonas Fa said, laughing from up at the front of the room. “They’re really terrible at this.”

Need An Answer swiped up a keyboard and started typing rapidly. A few seconds later, a message appeared superimposed on the AVEC projection, reading: “Please unmute. Remember that we are communicating with Günay Sadık.”

Another minute passed, and then the mute was lifted once more.

“Apologies, Need An Answer,” Jakub said, sounding as though he spoke through gritted teeth. “I will let you question Günay as you’ve suggested.”

“This is not an interrogation,” she replied calmly. “Though perhaps I ought to say that it need not be.”

The administrator bowed once more, more stiffly this time, and backed toward the rest of the techs sitting in the back-ground.

“Apologies, my dear,” Dry Grass said, smiling to Günay. “Please do continue. I believe we were talking about a potential memory trim.”

Her expression far more subdued, the systech nodded. “Yeah, we trimmed about fifteen minutes of memory from everyone we were able to recover.”

“Why fifteen minutes?”

“A guess, mostly. We tried trimming it closer and there were some effects of the...of the crash that stuck around in everyone’s memories.” She hesitated, adding, “It didn’t seem pleasant. Everyone affected was in agony, and they all quit within seconds, minutes at most.”

Selena lifted a hand and, when Dry Grass nodded to her, said, “We seem to be talking around what *actually* happened. Jonas said we’re talking about either an attack or gross incompetence. I’d really love it if you’d tell us what actually happened.”

Günay looked nervously back to the audience of administration and technicians behind her — many of whom I suspected outranked her — and stammered, “Uh...well, I mean...”

“Günay, please,” Dry Grass said, her voice quiet, earnest.

“Alright,” she said after a moment of silence, during which none of the administration moved to stop her. “What we think happened is that a broad-spectrum contraproprioceptive virus was released into the System environment, either destroying or inciting a crash in every instance it came into contact with. Since it propagated through the perisystem architecture, this was every instance on Lagrange.”

Towards the end of her statement, she had to raise her voice to speak over the upwelling of murmurings and gasps that showed through sys-side. Holding myself separate from the whispered exclamations being shot around the table at which I was sitting, I watched as the representatives up near the AVEC stage scanned the audience.

“‘Was released’ implies a deliberate action,” Selena said once the room had quieted enough. “Do you have any confirmation on that?”

“Uh...” Günay clutched her tablet in her hands. “Even if I knew anything — and I’m not on that team, promise — I’m *really* not qualified to talk about this.”

Jonas Fa raised a hand to silence any further questions. “No, you’re right. Much as I hate to say, it’s probably not the best time

to talk about this.”

Angry muttering from around the room.

“If it was a deliberate action, especially if phys-side played any role in it at all, then we’re talking about a breach of the Articles of Secession,” he continued, more to the sys-side room than to the AVEC stage. “We’d need set up a working group to get in touch with phys-side leadership as soon as we have more information. Thanks, Günay, you’re off the hook for this one. Mr. Strzepek, no need to send details, but please send me a side-channel message as to whether or not I should be setting up that WG. No-” He held up a hand as Jakub started to rise. “-I don’t need any details beyond a yes or no. Do it from your HUD right now.”

Jakub looked as though he was about to explode, so thoroughly had he lost track of his planned meeting. “Now, hold on-”

“Jakub, shut up,” Jonas Fa said, sounding chummy, almost fond of the man. “You’re so fucking far out of your element I’m surprised they haven’t filed a missing persons report. You’re talking to an emergency council of a nation 2.28 trillion strong, a nation that you have already been reminded just lost 23 *billion* citizens. Three of the original Council of Eight are here, meaning you’ve got people more than three centuries old standing in front of you. People who *signed* the Articles of Secession. Fuck you, fuck your meeting, send the message.”

The rooms on both sides of the AVEC connection were silent. For all I’d read about Jonas as some massively manipulative political player on the System, out-manipulating even the famously manipulative Odists, seeing him bear down on an individual, sitting just shy of actively upset, was enough to leave me holding my breath. This man, this mover-and-shaker of politics both sys-side and, prior to uploading in the early days of the System, phys-side, was a figure out of myth, a character from the grand stories told in histories and novels. That I had even been allowed to sit in the same room as him suddenly felt wrong. Sure,

Marsh had known a few of the Odists through their singing, and Cress and Tule had their relationship with Dry Grass, but certainly none of the political ones.

Jakub wilted under the weight of the realization of the magnitude of the situation. He appeared to see, all at once, just how out of his depth he was.

After a pause, Need An Answer spoke up once more. “The final item that we would like to speak about before we end this meeting in order to discuss our next steps is the ongoing communications embargo.”

Günay blinked. “That’s not my area of expertise at all.”

“But do you at least know the current status?” Debarre asked.

“Well, sure,” she said slowly, as though hedging her words. “Communications to Earth are limited and censored at the moment, and communications between Lagrange and the two LVs are being slowly ungated. I don’t know if those are being censored or not.”

“Why weren’t they just ungated immediately?”

“I don’t know the political reasons, but there was also a worry about DSN capacity...”

“Is there an actual concern about the DSN?” Selena asked.

“I’m even less of a space nerd than I am an information theorist,” Günay said, smiling wryly.

Dry Grass asked, “I am assuming that you are gating communications from the LVs under a similar embargo. After all, to their eyes, we disappeared quite suddenly, yes?”

She shrugged. “Your guess is as good as mine, but I’d be surprised if that wasn’t the case.”

Dry Grass laughed, not unkindly. “Yes, fair enough.”

“Are you able to ungate communications to a limited subset of clades?” Jonas asked.

Günay looked thoughtful, lips moving faintly and fingers twitching as she queried something in her HUD. “That should be possible, sure. You want your four clades ungated?”

“The Ode clade, the Jonas clade, Debarre’s clade, Selena’s clade, and the Marsh clade, yeah.”

I frowned, shooting a glance over at Sedge who only shrugged.

“*What would that buy us?*” I asked over a sensorium message.

“*We could hear from those on the LVs, I guess.*”

My frown deepened. “*So we could hear from Marsh, then?*”

She sighed. “*I guess. I don’t know what that buys us. I’m not exactly about to tell Jonas to stop, though. I’m scared enough of him as it is.*”

I snorted, nodded, turned my attention back to the front of the room.

“–will have a separate meeting regarding the ungating of transmissions,” Need An Answer was saying. “That falls under the realm of politics, yes? It is hardly something you need worry yourself about, Günay.”

“Thank God,” she said, laughing nervously.

“Have you received the appropriate message from Mr. Strzepek, Jonas?”

“Yep, got it.”

“Thank you,” Need An Answer said, bowing. “Thank you for all of your hard work, everyone phys-side. Despite the terse tone of some of our questions, please do know that we are grateful for all that you have done in your efforts to bring us back online. Trillions of lives may continue, even if not unchanged.”

Everyone on both sides of the AVEC link stood and bowed. Some, I noted, more curtly than others. Jakub and Debarre both seemed ready to start hollering at a moment’s notice.

When the transmission ended, the noise in the room rose to a low murmur, and then a quiet chatter. Several instances quit or stepped out of the sim entirely while many more streamed back out into the ballroom-sized workspace. A few lingered, though, little knots of conversation in a still-dim room.

“I am fucking exhausted,” Dry Grass — or at least the instance that lingered with us — said, falling back into her chair.

“Less than an hour, and I am fucking exhausted.”

“Weren’t you exhausted before the meeting even started?” Sedge asked.

“Well, yes,” she said, voice muffled as her head drooped toward her chest. “But now I am tired on a much more existential level. I am tired in a way that feels like social burnout, like I have been around too many people for too long.”

“Which I suppose you have,” Sedge added, stretching her back before rubbing her hands over her face.

We stayed in silence for a few minutes. It was hard to dispute Dry Grass’s words, too. Even for me, who had only been here for a bit over an hour, everything that had happened in that time, the sheer amount of information, had me feeling full to bursting. Still, I couldn’t seem to think of anything else.

“What was with all the cageyness?” I asked. “That Jakub guy, sure, but it seemed like a more...I don’t know, systemic thing.”

“Oh, it very much is,” Dry Grass said. “Jakub is a putz, but an innocent one. He is doing what he was hired to do, and he was hired by the System commission, which works with the world governments. There are several layers above him, and all of them are trained to act cagey.”

“So it’s just politics?”

She nodded. “I would say so, yes. It is more nuanced, but that is not my area of expertise. He is withholding the information he was told to withhold. They are locking down communications for whatever reasons they have, which I am sure are good. It is our job, then, to press at that, to find all of the weak and sore spots and try to divine why all of this is being done.”

Sedge’s expression soured. “We can’t just ask?”

“Of course not. There is a protocol to follow.” Dry Grass laughed. “And that includes all of the little jabs Need An Answer and Jonas shot at phys-side. It was less that we were making a demand for that information as it was letting them know that we knew that they knew more than they were letting on and that we were not happy with it.”

“Why promote Günay, then? She looked really uncomfortable getting stuck in the middle of that.”

She shrugged. “I am guessing, here, but I think that that was intended to say to phys-side,” “What is most important to us right now is the ‘what’, rather than the ‘why’, except inasmuch as the ‘why’ might help illuminate the ‘what’.” It is a way of saying, “We will have talks on whether you fucked up or we were attacked soon, but not until we know the full status of the System.””

I shook my head. “None of this makes any sense, but neither did all of the politics stuff in the *History*, so I guess that’s par for the course. You certainly seem to know plenty, even if it’s not your area of expertise.”

“Unfortunately,” she grumbled. “Regrettably. Unwittingly.”

“At least you can translate for us poor peons,” Sedge said, grinning.

Dry Grass smirked. “Yes, yes. But come, let us get back to Marsh’s. This place has its uses, but I need cozy more than anything. Maybe we can gather the others for dinner.”

We sat around the table, saying nothing, each doubtless lost in our own thoughts. The decision to pare down our dinner hadn’t been made unilaterally, but in fits and starts.

We arrived back in Marsh’s study quickly enough, finding it far more full than when we had left. The initial offer of dinner was well received, but the longer we talked about it, the more that seemed to cool.

Lily, of course, had stepped away almost immediately after we’d arrived. Although she appeared to have made the decision to reconcile with Dry Grass, that didn’t mean that she didn’t have to put any work into it. She still had her anger, her resentment for what she felt that the Odists had done in their shaping of the System and its history, their role in Marsh uploading in the first place, and for that, I could hardly fault her. I had had my own feelings over the years that had lingered, that I had bathed

in helplessly, struggling to escape the odd comforts of depression or angst or anger. I could hardly expect her to climb free immediately.

“I do not blame her, either,” Dry Grass had said shortly after she stepped away and I voiced these thoughts. “It is not comfortable, to be clear. I do not like that she hates me. My role — the role of my whole stanza — is to revel in feelings of motherhood. I saw myself as mother to the System on a very real, very mechanical level, back when I was working as a syseng. To have a citizen of the very System I love hate me is perilously close to having a child hate me.”

Sedge had was the next to turn down the invitation.

“I’m feeling stretched really thin, all of that research over the last few days. I love it, don’t get me wrong, I just can’t think anymore,” she’d said, shoulders slumping. “My brain has turned to mush and I just kinda want to find a really dark sim and stare at nothing.”

Rush, initially quite interested in a communal meal, bailed not long after, saying that ve was too sleepy, that the night was coming on too quickly, it felt, with so much new information coming at ver too quickly.

And finally, Hanne stepped away without warning. She sent me a sensorium message a minute later saying that she was meeting up with her friends, with Warmth In Fire leading a memorial for Shu. That was more important than dinner, and the prospect of forking of engaging with the mechanics of our world, felt fraught to her.

So it was that Cress, Tule, Dry Grass, and I sat around a table, hotpot bubbling away in the center, in a nearly deserted restaurant. We said nothing, each doubtless lost in our own thoughts, as we dredged veggies and tofu, thin strips of fish and squid, and thinly sliced lamb through the spicy broth, carefully fishing them back out after the scant few seconds it took for them to cook so that we could eat them atop bowls of rice.

It was Tule who broke the silence. “This is all incredibly fucked, but at least the food is good.”

We all bust out laughing. Cress, most of all seemed caught up in the humor, laughing uncontrollably until tears streamed down its face. That laughter briefly veered into hysterical sobs as it hunched over in its seat. We had long since set up a cone of silence, and I think we were all glad for that now, as it made the space feel more intimate, more comforting as Tule and Dry Grass bookended Cress and rubbed their hands over its back.

“Sorry,” it said once it was able to sit back up. Its voice was round, stuffed up. “I don’t even know why it hit me like that.”

“Too many emotions at once?” I suggested.

It shrugged. “Maybe. I mean, that’s definitely true, but I don’t know if that’s why I fell apart.”

“You do not need to know why, love,” Dry Grass said gently. “You are allowed to be a confused mess in this confused mess of a life.”

I nodded, dredging a skewer of shrimp through the bubbling hotpot and waiting for it to cool enough to eat. “I have no clue how to feel, myself. I keep alternating between tired and down on myself for not doing enough, and working frantically on what feels like a good idea until another comes up.”

Dry Grass tilted her head, a curious gesture I’d noticed in her cocladists as well. “Are you still feeling conflicting emotions from your merge?”

I stiffened in my seat.

“Only if you are comfortable discussing it, of course,” she continued, voice soft. “I just imagine that there is no more appropriate crowd than this.”

Both my cocladists had a blank look on their face before Tule fell once more into laughter. “Oh my *god*, Reed.”

“What?” Cress asked.

“I merged down before New Year’s.”

“Yeah? And? I don’t–” it began, then flushed red in its cheeks. It started to laugh as well, “Oh no, Reed. You kept the

memories?”

“Yeah. It was a confusing night, you merged down before I’d forked my new instance,” I said. I slouched down in my seat, feeling the heat rise to my cheeks as I watched both of my cocladists laugh while Dry Grass sat, smiling earnestly at me. I knew that smile well, knew it from nights and nights together, from Sunday brunches and afternoons lounging in the sun. I shook my head to clear it. “You really want to talk about this now?”

She nodded. “I would like to talk about anything — *literally* anything other than what we have been talking about for days — and I will never turn down the chance to talk about feelings.”

“It’s not a bad idea, Reed,” Cress said, still grinning. “If you want to, I mean. I imagine it’s gotta be weird as hell.”

“Oh, it is!” I said. “I certainly wasn’t thinking I’d wind up with a bunch of feelings for someone I’ve only met a handful of times. I have years and years of memories of you two together, seeing each other every day, even you falling in love, and those have always gone to the instance that merged down with Marsh.”

“Wait, so...everything?”

I shrugged. “I left some of the merge to finish after I merged down, but then my down-tree quit and I was left with half of a merge complete just so I had less weighing on me, you know?”

Dry Grass nodded. “Pending memories get uncomfortable after a while, yes.”

“Right, and I had planned on discarding most of the memories about your relationship starting. I remember meeting you,” I said, nodding to her, “and then I set all of those memories on hold while I was getting ready to merge down. I knew you all had gotten together, of course, so I knew to stop there.”

“Why, then, did you not choose to forget? To let those memories go?”

I looked down at my plate, nudging my skewers into a neat row. “I don’t know. Stress? All of that stuff started happening with Marsh and it felt more important to focus on that, so I just

incorporated everything in one fell swoop.”

“So now you’re left with our feelings,” Cress said. The laughter had left its features, and had the embarrassment. “You’re left with our relationship.”

I nodded.

“You’re left with our hyperfixation, more like it,” Tule followed on, laughing. “God, we were both just head over heels for you, love.”

Dry Grass scoffed, hand to her chest in mock effrontery. “Are you not still?”

“Nah.”

“Nope, not at all.”

She snorted, shook her head. “Do you see the guff I must put up with, my dear?” she asked me, a look of long-suffering pain on her face. “I build a relationship with sweat and blood, and am repaid in snark and tired humor.”

“Don’t listen to her,” Tule said. “She’s just being a drama-gogue.”

I laughed. “I remember that, too,” I said. “And I guess that’s sort of the problem. I remember what it is about you that drew Cress and Tule — or, at least what drew Tule — and I’m as much a Marshan as they are, so here I am, feeling awkward about being around you because I remember those months of hyperfixation, and then the comfortable normal that you settled into afterwards.”

All three of them smiled, all three looked a bit bashful.

“You’re all really cute together, is what I’m saying.”

Dry Grass gave a hint of a bow. “We do try, I believe.” She reached forward to the box of empty skewers and tapped it against the edge of the box, cycling through options until she wound up with another set of sliced chicken to drop into the bubbling broth before her. “Are these memories of us, of Tule’s relationship, clashing with your lived experience to date? And how about those of Sedge and Rush?”

More food sounded good, if only for something for me to do,

so I tapped through options until I came up with a skewer of fish cakes — Dry Grass having requested we skip my usual choice of thin-sliced pork for her own dietary restrictions — which I let slip into the bubbling pot. “Since Sedge’s merge-down fork incorporated Tule’s memories wholesale, they weren’t exactly tainted. And besides, they mostly tallied with what Sedge, Rush, and I know of you already.”

“That does not quite answer my question,” she said gently, lifting her skewer and nudging the slivers of chicken onto a bit of rice in her bowl. “I am pleased to hear that there was no great clash up against what you know of us. What I would like to know, however, is how memories of being in a relationship with someone are fitting in with your lived experience of not being in one with them. We have met, yes? Attended the same dinner parties? We have seen each other here and there. Throughout all of that, I have just been that weird old woman that lives with Cress, and then with Tule, and now some part of you remembers, I suppose, loving me.”

Following her lead, I pulled my own skewers and rested them on my bowl of rice. It was a good distraction, a moment for me to think as I nudged the fish cakes off of the skewer onto a bite of rice.

Or, well, I had hoped that I would have a chance to think. Instead, I found my mind hopelessly empty. Instead, I found my thoughts focused on trying to get the chili-stained fish to stay atop that morsel of rice, on trying to get as much of that as possible held in the precarious grip of my chopsticks, on trying to fit it all in my mouth without looking like a complete idiot.

The rice was too dry or too sticky, the fish cakes too chewy or too spicy, the bite too big and yet over with far too soon for me to make anything that could be considered headway on the topic at hand.

What a dumbass, I thought to myself.

Aloud, I said, “I don’t know. I guess that’s not all that eloquent, but it’s only been a few days now, and...well, yeah, you’re

right. There's a part of me that remembers being in a relationship with you and all that goes with that. I—"

Tule looked aghast. Cress, laughing, shook its head. "Oh my god, Reed."

"Hush, my dear," Dry Grass said. "Had he not brought it up, I would have asked after the memories of sex next."

"Love!" Tule said, burying his face in his hands.

"Love!" she echoed, laughing and leaning over to kiss his cheek. "This is the future we have found ourselves in, and it is a future entire, not some clean story stripped of references to gross anatomy and base desires. Reed, please continue."

The exchange had led to a flush of embarrassment of my own. I had been talking about emotions with that "all that goes with that" phrase, but I suspected that Dry Grass was right to bring the topic of sex up sooner rather than later. That she had done so so adroitly, with humor and not a shred of bashfulness about her certainly helped to ease the humiliation that I felt brush past me. I was able to master it for the time being — or at least ignore the burning in my cheeks — in order to continue on.

"There's a part of me that remembers everything, but it still feels just like that, memories," I said. "I could dredge up any one conversation, but none in particular stick out to me in the same way as a conversation that I'd experienced directly would. The memories are there, and I'll be reminded of them, but they're not at the forefront unless something happens to bring them up."

Both Cress and Tule visibly relaxed. "So it's not exactly something you're thinking about, then?"

"Well..." I started, then stalled out.

"I suspect he might not be," Dry Grass said, speaking slowly with her curious gaze lingering on me, as though prepared to stop at the first sign of me jumping in. "Except for the fact that we have been working together quite closely these last few days, yes? That is part of why we are here now, is it not?"

I nodded. "I guess so. If things were...uh, more normal, then I guess there might be a strange moment or two at dinner parties, but we've been together more often than not the last few days, so it's...I don't know. It's weird."

"I bet," Tule mumbled. He still looked flushed from the previous rush of embarrassment. "I can't imagine what that must be like."

"Surreal," I said, laughing. "It's really highlighted just how parallel our lives are, because I'll be reminded of all of these things when you speak, Dry Grass, or by the way you look or move, and it'll mean two different things to me."

"Is that unpleasant?" she asked.

I shook my head vehemently. "Not at all, no. I can even mostly ignore it. It's like a dream that sticks with you through the day, you know? Except that it's a year of memories that are sticking with me for a few days, now."

"Do you *want* to ignore it?"

"How do you mean?"

She sat back in her chair, folding her hands over her stomach. "Well, you could continue on as you are, ignoring these concurrences as they arise, or you could act on this new life that you have been given. You could request that we not work so closely together for a while, for instance. This is a perfectly cromulent thing to ask of someone, yes? You have an issue to work through, the issue is spurred by someone's presence, them not being around would alleviate that stress, hey presto. There is your solution.

"You could talk about it more, much as we are doing now. That is just as valid an act. If you would like to engage with these memories actively, then there is nothing stopping you from doing so, least of all me." Her faint smile slipped into a smirk as she added, "Hell, you could decide to ask me on a date, if you wanted, since you already have memories of that working out quite well."

“God, love,” Cress said, giggling. “Are you aiming to net the whole clade?”

She smiled primly. “Would that be so bad? Though I believe I shall pass on Lily.”

The three of us Marshans laughed.

“Jokes aside,” she said once we had calmed down, “what I am asking is if ignoring these memories is comfortable for you. I suspect not entirely, or we would not be having this conversation.”

Put like that, I really did have to sit and think for a moment. I poured myself a cup of tea and watched as the other three settled back into a more mundane conversation. I watched as Dry Grass ladled broth from the hot pot over her bowl of rice to eat it like a soup, watched the way that she talked with her partners, my cocladists, one of whose memories rode shotgun alongside my own.

I had lived two lives in parallel, Tule’s and mine, and so I let that parallel continue into the future in my own imaginings. One Reed slipped almost effortlessly into a relationship alongside his cocladists, one woman acting as the pivot for our three lives. That Reed sat Hanne down to dredge up the topic of polyamory, untouched these last few years, to discuss this new relationship. That Reed forked to share time where it was required. That Reed grew ever closer to Cress and Tule in this shared orbit around Dry Grass, fell in step with however many others had found themselves mingling with the Ode clade over the more than three centuries they had been alive.

And the other Reed made the explicit decision to step back. It would have to be explicit, to; I wasn’t sure I could ever keep such a thing from Dry Grass if I wanted, her whole personality seemed to be built around openness. That Reed simply...slipped back into life as it had been. There would be a few awkward meetings here and there sure, but then those memories would fade into comfortable normalcy, as might any dream that sticks with one. Life with Hanne would continue as it was. Life with the

clade would be as it had always been.

Dry Grass had truly left me two forks in the road of equal value. There was no ‘winning’ or ‘losing’, no better or worse. The only path that felt unequal was to continue trying to ignore these feelings. Not just unequal, it felt inaccessible to me. She’d forced the topic out into the open deftly, for better or worse.

Better, I suspect. She knew the clade well enough to read those signs of discomfort in my words — no great feat; “I can even mostly ignore it” sounded like an equivocation even to me — that she had nudged me toward some more complete understanding by talking it out.

I — that me who had his own memories and not Tule’s — could certainly see what had drawn my cocladists to her.

Setting down my tea and reaching forward to snag the ladle in the broth alerted the others to my return to the present. I focused on the task at hand, filling my half-full rice bowl with broth before sitting back once more. “Thanks for talking this through with me,” I said. “I think you’re right, that it’d just be uncomfortable for me to keep trying to ignore it.”

“Wonderful,” she said, smiling.

“I don’t have an answer beyond no, I’m not comfortable ignoring all of this, I’m sorry to say.”

She shook her head. “Nor should you. It has been five minutes and change, Reed.”

I laughed.

“Yeah,” Cress said, leaning forward on its elbows. “There’s certainly more than enough going on besides, right? Not like you need to solve *every* problem.”

“Ah!” Tule said, sitting up straight and shaking his head. “This is too good a break to be wandering back into talk of whatever it is that we’ve been working on. Let’s stick with making fun of Reed instead, alright?”

It laughed, holding up its hands. “Alright, I wasn’t going to say anything else, but fair enough.” It turned to me, grinning. “Just enjoy dinner with us, is all I’m saying.”

“I am,” I replied. “It’s been too long since I’ve had hotpot.”

Andréa C. Mason#Millwright — 2401

I need a break.

Even before uploading, I was the face. The spokesperson. The rep. The primary fronter in a plural system of at least nine. The fursona everyone knew, the friend, the organizer, the closeted kid who burst out of the closet a social butterfly. It worked, then. Whether I wanted it or not, I was good at it, when we could manage our mental health.

I was one of the headmates that pushed for uploading as our body failed and our loved ones dropped like flies.

Not being the front when we hit the System proper was a bit of a shock, but when we finally fanned out and forked into our separate headmate-y selves, I de facto became the Face of the Clade. Alex eventually ended up running everything, she was the part of us that likes keeping archives and all that, but I was expected to be head of social affairs. Even later, when my side gig became my main gig and I functionally became a clade unto myself, I was still expected to be diplomat and ambassador in turn.

That side gig turned sys-side career was a flush of kinks and dreams made real. After about a decade of careful planning and testing, we started a company. We forked endless versions of ourselves and sent them out into the world. We found a way to replicate the “synths” of phys-side fiction, and embraced it so thoroughly that it now takes exceptional effort to act fully or-

ganic. Here, we could live out the fetish of being mass-produced, effectively engaging in sex work in the process, but also live out the fantasy of helping whoever needed it and being able to bow out if things got unsafe or unstable.

As we expanded rapidly, some part of me felt a pull towards authenticity, and we decided to have a “brick and mortar” headquarters. We worked with several sim artisans to create the now-famous High Falls Millworks#46b147c4. We chose the name, location, and design based on a district of the town our great-great-great grandmother lived in called Brown’s Race in Rochester, New York. Hundreds of years before even she was born, the city had made a name for itself off the mills powered by the waterfall and river nearby. We even went as far as to commission a meticulously crafted fully functioning triphammer forge, like the area once had. Her name was Andréa as well, and I took her name out of admiration. We also named our company 9IN INDUSTRIES as a nod to her favorite band.

Building a factory, one that made our production model look more complicated than “gather client specs and fork to those in another room”, one that featured a convincing “assembly line”, exploded our company overnight. We had to restructure on the fly, and that is where I forked from my downtree instance. The most continuous version of me, Andréa C Mason#Foundry, remained head of the company, but she forked me, Andréa C Mason#Central, to be the heart of it all. Yet again I found myself a face, communal voice, a spokeswoman and figurehead for this clade-within-a-clade we’d become.

My path from my downtree instance diverged quickly and wildly. I became less and less involved with any direct production or facsimile of such. I would fork for something, and then that fork would develop into an entire department. My forks spread out and I found myself not working with my hands all that much, really if at all. For our own safety and the safety of these so-called mass produced forks, we needed contracts, standards, and rules, inasmuch as those things are enforceable in a

System largely without any governing body. We were up front that any version of us that was sent out had full rights to quit at any time for safety's sake, and having that in writing out up front prevented all sorts of headaches and worse. Thus one of the first departments we ever made was a Legal Department of sorts. We weren't in it for any sort of profit, by the nature of our project we were already swimming in rep, but we did want to get the message out there to more people. So, I forked a marketing version of myself, and they began a Sales and Outreach Department. We had a team for returning forks and merges down, specifically based around coping with loss, trauma, abuses that might have led them to leave, conflict resolution, contract disputes. We had an HR and Public Health Department. As our operation expanded, we needed sim artists, construct artists, experts in fields, professional engineers, so we made a Logistics Department. We had an R&D team. Once we expanded far enough, we set up an Education and Training Department. When we'd flushed out the area around High Falls enough, we began to offer unused space up for development in the style of the buildings that had existed phys-side. We had a Real Estate and Zoning Department. #Foundry started out involved with a great deal of it, but she became more involved in the so-called "physical work", and even among the teams and departments that she founded, she trusted me to handle the ins and outs of people management. We had a surge in the early 2300s, at some point tracking over 100,000 forks, but those numbers waned in time, and we stabilized around the end of the century with about 64,000 "units" in service and me in charge of a whopping 6,000-person staff.

I tell people so often that I didn't like it, but the truth of it was, I was good at it, and for a while that was satisfying enough. We had built a company from the ground up, and I found myself at its peak. We had created an incredible corporation, one that had all the fantastic idealism of what a company could be, and because of the nature of the System, completely removed

from the reality, brutalities, and consequences of what running an actual business phys-side caused. #Foundry and I were praised through parts of the System, conservatives lauding us as poster-children of capitalism, and liberals championed us as meritocracy in motion, proof that with ethics and smarts, businesses could treat both customers and employees with respect and kindness.

The occasional leftist would praise our unions and sex-positivity, that a post-human trans woman being head of anything still felt like something worth celebrating, and a few more condemned us for recreating a corporation wholesale inside a place that should have been an anti-capitalist's paradise, but overwhelmingly there was silence from the people that once, a long time ago, we had called comrades and stood shoulder to shoulder with both phys- and sys-side. Now it is my greatest shame, but even at the height of 9IN INDUSTRIES's success, it left a sour taste in my mouth. Couldn't they be happy for what we'd accomplished, what *I* had built? #Foundry was lauded as a mechanical genius, but I was the face and name of the company. I joked that the C of our middle initial stood for Central, I appeared in interviews and magazines, I gave talks and attended conferences. #Foundry was the inventor, but I was the entrepreneur, and at my worst I basked in it. After all, I—and my thousands of forks, but really weren't they just extensions of me?— had worked so hard, I had *earned* my success.

A few partners left me over it. A few more I only knew through it. #Foundry had become more and more elusive over time, and even in CERES clade affairs and meetings and gatherings I began to take her place, forking and sending a merge down to keep her updated. I was two faces but one, perhaps the most well-known member of my clade, and the subclade of me within it. I was the ace of myself and my self. When the clade became embroiled in our Authority Crisis in the 2360s, I was the most affected and part of the fixes and rescues that followed. I was Andréa C Mason, and the #Central after my name was more

a job title than a signifier.

We gathered, that night, as so many across the System did, to ring in the new century, to send the 2300s out with a bang and to ring in the brand new frontier of the 2400s. Our entire staff was on hand throughout the offices and facilities, and many who had outside the lives had brought Partners or friends, and it was a revelry for the ages! God, what a night!

What a night.

God, oh gods above and below, what a horrible night.

To say that my subclade was hit hard by the century attack does not give any sense of scale. I have talked with many a pathologist, perisystem architect, and number of other experts about it, and still we lack answers. We were not the origin, but we were a minor epicenter, and for whatever reason, the contraproceptive virus was particularly effective at dismantling us in bulk. We kept in close communication and had very accurate numbers for how many forks of us existed at any given time, we used sensoria and a variety of other methods to keep an incredibly tight and informed network, and within .000001% margin of error, there were 69,760 Andréa C Masons throughout the system on the night of December 31st, 2399.

By the time the dust settled, 12 of us remained, and of those 12, two quit within a week. 4 more crashed from grief in the next month.

I can't comprehend how to explain what it felt like to suddenly look at the clock approaching midnight again, to find myself alone in a room that had contained hundreds, almost alone in a sim that over 6,000 people had inhabited what felt like only moments before. To run panicked and slipping through streets laden with snow from accurate weather sims, with no pawprints or hoofprints but my own, to find #Foundry alive and sobbing, to find 2 other forks, bewildered and dissociating, to become inundated with thousands of requests for help, of anger, asking what they had done wrong or if they had violated the contract or what had happened, and having no answers for any of them.

Finally, #Foundry sent a mass message to the feeds within a day, and 9IN INDUSTRIES shuttered, now likely never to reopen.

#Foundry nearly quit when she found out that not only had we suffered impossible losses, but through some mechanism we did not and still do not understand, caused further ones. If you were in proximity to a fork of Andréa C Mason when the Century Attack happened, there was an 85% chance that you died as well. Of the hundreds of visitors and inhabitants of High Falls Millworks#46b147c4 that night, not a single one survived. We were a *vector*, somehow. One of us quit and three of us crashed over that fact. Where do we even start to recover from this?

Partly, we just won't. We have our different reasons, but as the two leaders of our now defunct corporation, #Foundry and I have made the agonizing choice that we will not rebuild. We talked for days, sitting on our faithful reproduction of the Pont de Renne bridge, watching the falls roar and the sun rise and set, taking turns sobbing into each other's arms. Almost two centuries of work disappeared in what was to us an instant. We could not start again. It's over.

#Foundry has now taken my place in clade affairs. She wants to reconnect with her cocladists which are her siblings and her former headmates, which are the closest thing she has ever had to a family here and now the only family she has left. She struggled even to fork, although I understand that after an incident with getting her head stuck in a pitcher of fruit punch she is re-learning the trade. #Foundry is eschewing her reclusivity that marked so much of the back half of the 2300s, and trying to reconnect with her own "humanity" again, insomuch as a clade full of animals can have such a thing. I think it's good for her. She is, in the end, the most continuous version of me, and she should remember what it's like to be a person again. An individual. How to be Andréa instead of Director Mason.

As for me?

I'd like to pretend the change that I'm about to make is some Grand gesture of atonement and a reawakening of class con-

sciousness. It's certainly in play, I'm not going to pretend it isn't. Look at me, the turncoat, the hypocrite, the working class anarchosyndicalist queer phys-side turned girl boss captain of industry sys-side, who cast aside her morals and consciences with the slightest bit of success. I'd been so hard before uploading on so many people for giving up everything they believed in for even a small amount of success, and more than a few cases nothing less than righteously so, but when I found myself in the same position I put them all to shame. I tell myself that again and again whenever The Dread or guilt or shame creep in, I tell myself that now is the chance to atone and to regain my class consciousness. And yeah, it is part of it.

It's a bigger truth, the one I hate to admit but cannot deny, is that I was so fucking bored and no idea bores me more than going back to being the socialite.

A simple concept that a lot of people seem to struggle with is that just because someone was really good at something, doesn't mean they like doing it. It is entirely possible to learn or understand innately the skills and necessities of a trade, to have a skillset or the tools to be really really good at something, and still get a little enjoyment out of performing that thing. My business may have vanished into the ether, but I still have all those social connections, I still have a reputation that precedes me hours in advance of me showing up anywhere, my fame and to some degree what you could call a fortune of social capital still exist, right there, waiting. If anything, if I chose to go back to that life and flourished again my legend and legacy would become even stronger, the determined woman who didn't let one of the greatest possible losses one could suffer slow her down, who pulled herself up by her bootstraps from nothing again, a phoenix, reborn in the mythology of good old protestant work ethic.

Even that in itself should fill me with disgust, but it only furthers my apathy. I took pride in a product I claimed I produced, despite how little I had to do with it actually being made, and

that brought me the satisfaction that all the social engineering and handshaking and baby kissing and photo posing and being a people person didn't. The pageantry of rich people, of successful people, of this upper class is largely that. Pageantry. Their parties are dull, their social mores and customs and activities lack substance, nothing really happens that makes anything. There was never any struggle, there was barely any conflict, and it produced only an ennui in me that I did not see the size of until someone all but ended the world.

I want to work with my hands. I want to make things. I want to be alone, and I want to create. The people who made it what it was may be gone but High Falls Millworks#46b147c4 still exists. All its machines still function, and I'm going to take the time to learn to use every last lathe, forge, and press in here, and I'm going to *make* things. I want what I do to be tangible, to be meaningful, not words and nods and smiles and fuckings in the right place to keep things moving. I've hired a number of people to help me maintain the sim, but I have asked them largely to keep our relationship professional and distant, and when I finally feel satisfied that I am not just a voice and a face, maybe I'll even try seeing people again.

Until then, I ask you keep any requests or comments to yourself. I'm not going to be in a place to take commissions anytime soon, I just need to forge for myself for a little while. Hone some real skills.

Maybe this will go nowhere, and I'll just quit and merge down. More likely I'll individuate, but really, that's my business, not yours.

Also, ditching the old tag. Figure it's obvious why. Turn off the spotlight. Close the curtains. My monologue's over. The show must go on, but it can do so damn well without me.

Goodbye.

Andréa C Mason#Millwright.

Reed — 2401

I was left that night with a sense of having taken a step forward. It wasn't completion by any stretch, I hadn't made any dramatic decisions, hadn't changed anything, really, except getting dinner with a polycule and talked about feelings.

I had made that small decision, though, the decision to continue to think about these feelings on Dry Grass lingering after the merge.

The immediate outcome of this was a hug and a conversation. The hug came from Dry Grass after dinner. She asked, I said yes, it was a mix of awkward and pleasant. The conversation came when I got home and spoke to Hanne.

"Wait, you kept the *whole merge*?" she said, laughing. "I mean, I guess I can't blame you with all that was happening, but still, why didn't you just discard it?"

I shrugged. "I'm not totally sure. I don't remember that night very well. Not that I forgot, I mean, just that everything happened so quickly and was so scattered that that's all the memories are, too. I think I was worried that maybe I'd disappear, too, or that Tule would, or Sedge."

Hanne's expression fell, replaced by something far more serious. "Okay, *that* much I can definitely understand. Is this the only real fallout of the whole merge?"

"I guess. There's a bit of fussing about intraclade relationships in there, which, okay, another thing to consider, but I love all my cocladists at least as family, so it doesn't feel too bad to

me. I definitely love all my up-trees.”

“There’s quite a jump between loving like family and loving like a partner, though.”

I nodded. “Not denying that, just that I think Tule had...well, it’s not that he didn’t love the rest of us, he just didn’t think of the rest of us all that often. Not as often as I do.”

“Well, fair enough. Everything else was just boring, then?”

“Pretty much. Good food, dates with Dry Grass and Cress, playing around with music.”

“And what’s the practical fallout for you?” she asked.

“You mean in terms of Dry Grass?”

She nodded.

“I don’t know yet. I’m still feeling kind of split on my feelings. Having memories of her as an acquaintance clashing with memories of her as a partner is still too stark a difference.” I snorted. “Not to mention this all feeling like a distraction from all of the other problems at hand. Worrying about what she means to me feels like energy not being spent on trying to figure out what happened.”

“You’re all such workaholics.”

“Guilty, I guess.”

She grinned, reached over and patted the back of my hand. “Well, whatever. I trust you’ll overthink things and then come to a conclusion after a lot of bitching, and we’ll keep talking about it.”

“Right,” I said, laughing. “Of course we will.”

I spent the rest of the evening at home, lounging on the couch while Hanne slouched over my lap and asked me to play with her hair. While I did so, we both focused on our own thoughts or internal work. I spent much of that time in idle sensorium conversations, trying to get a better picture of the state of things.

Sedge had gone to sleep for a bit, but as she woke up, she caught me up on news from when she’d been dozing. The politicians had drafted a letter explaining what had happened on a

technological level to post on the largest of the perisystem feeds. Much of it was information that we'd gained from the AVEC session with the phys-side techs, explaining that nearly 1% of the System had been wiped out and deemed unrecoverable via phys-side means, that there had been a mass crashing event, that the world was assumed stable and the issue had been patched.

Conspicuously missing was any mention of a CPV attack, any mention that everyone — all 2.3 trillion of us — had crashed, or that messages were being gated and censored. Sedge explained that the last had included some gentle untruths. Rather than this being a political effort, this had been phrased as “slowly bringing Lagrange up to full capacity”. It wasn't wrong, *per se*, they really were working on bringing the feeds up to full capacity; it's just that the problem was political rather than technical.

Dry Grass, in our own conversations, explained that there were already rumors flying about, and that these were being subtly steered by Odists, Jonases, Selena, and, to a lesser extent, what she called ‘the opposition party’, a group of clades led by Debarre who had settled into an uneasy truce with the other group. Rumors were being nudged away from “an attack by the Artemisians” and towards “solar flares or a power failure”.

Rush, meanwhile, had latched onto Serene and talked her into letting ver follow along as she took a tally of all of her sims and those of her friends, seeing what remained and what had been marked as abandoned. While ve had always been one for exploring, seeing ver lock onto an interest this hard was new. Ve admitted quite quickly that it was something of a coping mechanism, something to do that wasn't fret about what had happened to our world.

The longest conversation I had that night was with Lily. I had initially been surprised by how chatty she was, but the surprise mellowed as she went on.

“I just want to make sure that all of my grouchiness isn't getting in the way of me keeping up to date,” she said. *“Dry Grass has...well, it's actually been really cool, all that she's doing, so I definitely respect*

her”

“You just don’t want to be around her?” I asked.

There was a shrug, felt rather than seen. “I guess not. It’s just hard for me to let go of, even if I’m committed to at least trying to do so.” She laughed. “But yeah, I don’t want me hiding away to mean I’m not kept in the loop.”

“Well, Sedge—”

“I don’t mean the logistics, Reed.” I could hear the smirk in her words. “Or not just the logistics — Sedge has been keeping me up to date, yeah — but just keeping up with the rest of you. Cress and Tule are glued to her side, which, fair enough. Sedge has found her in with the rest of the politicians through her. You’ve been hanging out with her. Rush is off gallivanting with some other Odist...”

I sighed, steeled myself. “Well, yeah, fair enough. I’ve been spending time with her because I got pulled into being a bit of an organizer for everyone else, and because I kept Tule’s merge.”

“You did? God, now you’re going to wind up glued to her side, too,” she replied after a moment of parsing out the ramifications. She laughed, though I couldn’t judge just how earnest it was. “But hey, it is what it is, right? This is why I want to keep up with you all. I’m out here trying to check in on friends, too, I don’t want to wind up losing sight of the clade.”

“Yeah, I get that. I really appreciate it, too.”

We chatted for a while longer before I noticed that Hanne had started to doze off, and I nudged us both to bed for the night.

My dreams were scattered, disorganized. In some of these scattered images, everyone who had gone missing suddenly returned, but unchanged. Sometimes they were mute. Sometimes they never smiled. Sometimes they were completely normal, but missing some integral memory, something that made them *them*.

Other images throughout the night veered away from fear and into grief. Marsh was gone. They were *gone*. There was a hole in the world that would never be patched, and my dreams lingered on that lack. In my dreams, there was a literal hole in the

world, a blackness that ate all light, and we could do nothing to avoid it. It was in the way of wherever we most needed to go.

The morning greeted me with a rising sun, another mug of coffee, and a queue of messages to work through.

These last fell into three camps. Several were messages from friends that were well-wishes for the work at hand, offers of condolences for the loss of Marsh, suggestions for things to try. These were all shelved for later. At some point, I'd have the spoons to respond to them, but certainly not now.

The second camp were ones surrounding the grief and loss of others. These were messages from friends that relayed stories of their own losses. Partners disappearing mid-conversation. Friends no longer sitting across from them at the bar. Games interrupted, now, apparently, never to be completed. These I mostly passed on to Sedge. My emotional bandwidth was running thin. Too many dreams. Too many strange floods of stranger emotions over the last few days.

The final camp I eventually tagged 'work'. These were a handful of messages, mostly from Sedge and Dry Grass, that pertained to plans for the rest of the day, items on various checklists that they wanted help ticking off.

I read these more slowly. Where there were questions, I answered as I could or, if not, delegated to the rest of the clade or other friends. Where my own attention was requested, I gave my opinions as I had them.

I'd apparently been tapped as one of the organizers, a sort of liaison between our two clades, one who, as one of the messages hinted, had his shit together in a way that the rest of the clade did not. I counted myself flattered, though it also rankled that that had become my defining feature while I felt like I was only flailing, trying to pin down emotions while kicking myself for not doing more to directly address the clade's own problems. How could I be a manager when I couldn't even figure out my own problems?

I put a halt to that line of thinking by repeatedly telling my-

self that my problems were now almost universal, that the feelings around Marsh being missing were now feelings that were being felt by millions, if not billions, of people all over Lagrange.

After finishing my message triage, my coffee, and the making of the bed, I stepped out of the bedroom, only to find the rest of the house empty. A note on the table from Hanne explained that she was meeting up with yet more friends from her construct artistry group.

I sighed.

No distractions, no reason to stick around, nowhere I wanted to visit. Might as well head back to Marsh's study, one part of the *de facto* headquarters for much of the response to this mass crashing event, and catch up with those who had taken charge.

"Reed," Dry Grass said, bowing informally and immediately leading me gently by the elbow out of Marsh's study, explaining as she went. "We are preparing for a meeting coming up in about half an hour. Messages are being sent from in there. I would not wish to distract the senders. Please step to Workroom#22a2392c in the future."

"Oh? This representative sample meeting?"

She nodded. "Yes. I am pleased you are here; I would like the Marshans well represented, as well."

"Sure, if you say so," I said, shrugging. "I'm still not really clear on what exactly it is."

"It is intended to be a sample of clades from across the System that have been hit in various ways. You are here, with your root instance gone. We are here, to represent the founders who have been hit to a lesser extent, yet who have experience being without a root instance. Andréa C. Mason#Central of the CERES clade will be there. They lost nearly seventy thousand instances."

"Jesus," I murmured. "I remember you mentioning that on the first day, and I still can't quite get over that number."

"Neither can I," she said, gaze drifting down and to the side. "This corruptive event hit everyone differently, and with such

numbers as we have here on Lagrange, some clades were bound to get hit far harder than others. Debarre will be there as well, both as a political figure as well as a member of a clade of about one hundred that lost zero instances.”

“So it’s just a bunch of clades getting together to talk about what happened?”

She shrugged. “What happened. What to do. What to ask for.”

I frowned. “‘Ask for?’”

Dry Grass guided the two of us through the workroom, picking up more instances as we went with a gentle tap to the shoulder. “I do not mean to speak of reparations, though that may at some point come into play. What we might ask for are reassurances. We might want fixes. We may want greater visibility into the day-to-day running of the System. SERG may request—”

“SERG?”

“System Emergency Response Group. They may request greater access to the lower levels of the System’s functionalities.” She smiled faintly, tapping one last person — Debarre, it turned out — on the shoulder. “I am having to ramp up on all of this quite quickly. I stepped away from my role as systech a long, long time ago, with a long-lived up-tree taking over my role.”

“They can’t merge down?”

“They no longer exist, Reed.”

“Oh,” I said dumbly, averting my gaze.

She rested a hand on my shoulder. “It is okay,” she said, smiling reassuringly. “Or, well, it is not okay, but I understand. You did not know. I am dealing with the loss by burying myself in work. On that note, let us join the others, yes? I have ACLS enough to set up the room better.”

I watched as Dry Grass set up the room for this smaller conference. Without so many Odists, Jonases, Selenas, Debarres, Marshans, and however many others, there was no need for the presentation setup, and so those tables that had been set up before the stage were instead joined together. Dry Grass released

them from their stolidly stationary positions and pushed them together. Merging like drops of mercury, the dozen or so smaller tables became one large circle. This was then corralled with gentle tugs of her hands to a much smaller shape, remaining a perfect circle. Chairs trailed after the edge of the table like eager puppies, merging together in similar fashion whenever crowding grew too great.

The next change was to the square platform of the AVEC stage. The light-gray material that made it up was similarly shrunk down with nudges from her foot. The table was given a gentle push so that it settled just over the edge of the stage.

I'd had little to do with sim manipulation beyond simply expanding or reducing bounds, and almost nothing to do with object manipulation beyond pulling items off the exchange. That had always been Hanne's game, and while I'd watched her work plenty, it had never been so casually exhausted as Dry Grass's manipulation here. She worked with such surety, such tiredness on her face, that her age seemed all the more evident. Of course someone more than three centuries old, someone who had spent nearly all of that time here on the System, would be able to move through this world with such ease.

"Alright," she said, flumping down into one of the chairs across from the AVEC stage. "I think we are all here. While I would obviously prefer you stay, it is not a requirement. If you need to duck out, feel free to do so. We are just waiting on Günay and we can get going."

About twenty people had shown up. It didn't seem to be twenty clades — there were two Odists, after all, with Dry Grass and another from the eighth stanza, Why Ask Questions When The Answers Will Not Help — but the audience remained diverse. Only about half appeared to be human of some sort, with the Marshans, Odists, and Jonases accounting for most of those. I suppose it made sense, given the Odists' social circle, but that didn't quite tally with what I knew of Jonas's role in the leadership of the System. He didn't strike me as a furry.

When asked over a sensorium message, Dry Grass replied, *“The eighth stanza has been slowly tamping down on Jonas’s role over the years. He has not been nearly as grounded as he once was.”* She cast a slight smile in my direction, adding, *“Too singularly focused, perhaps. All work and no play makes Jonas go fucking batty.”*

I stifled a laugh. It probably shouldn’t have been funny, but the absurdity of the comment clashed just right with the mirrored absurdity of the situation. Probably best not to laugh in front of everyone.

Just in time, too, as there was a polite chime from the location of the AVEC stage, and Günay faded into being. She was clearly sitting at her own table far different from ours, but some trick of the AVEC software quickly scaled her to the point where it looked as though she was sitting there with us. The opacity was even turned all the way up so that she was just as present as the rest of the attendees.

“Hey friends,” she said, waving. “Wasn’t expecting an invitation for just me.”

Answers Will Not Help gave a hint of a bow without standing. Her voice seemed to sit just shy of laughter, though whether that was a laughter was teasing or convivial was difficult to say. “What can we say? We like you.” She waved around the table. “We have a group of representatives from a variety of clades. I think you met a good chunk of us yesterday, yes?”

Günay nodded. “Yep. At least, I remember Dry Grass and Jonas and Debarre and Selena.” Her eyes darted around those seated at the table, likely reading through name tags. “Answers Will Not Help...I’ve heard your name, at least.”

“Right, I bet you have,” Answers Will Not Help said with a smirk. “We are a notorious group, yes? For those you have not met, we have selected a group of clades among friends who we believe to be both good people and representative of the various ways we have been affected.”

The systech nodded again. “Alright.”

“Reed and Sedge of the Marsh clade lost their root instance,

a loss of 14%. We Odists have lost 2% of our number, including two lines of the Ode and two long-lived up-tree instances. The Jonas clade has lost approximately 3% of their number. Andréa C. Mason and Harvey of the CERES clade have been hit particularly hard,” she said, gesturing to an anthropomorphic coyote and goat across the table, “with Andréa’s subclade losing 99.983% of their number, totalling 69,760 instances destroyed.”

There was a long moment of silence before Günay whispered, “What the fuck.”

Answers Will Not Help continued smoothly. “Debarre, on the other hand, lost zero instances for a total of 0%. Obvious, yes, but I believe that will do well to illustrate the apparent random nature of this event from our end, yes?”

Günay nodded, expression lingering in shock even as the Odist continued around the table with introductions and percentages lost.

“Günay,” Jonas Fa said once this had wrapped up. “Jakub and I had a pleasant little chat and, if you’ll cheek, you’ll see that NDAs have been lifted.”

She frowned, blinked a few times, then said cautiously, “Okay.”

“He also confirmed that this was an intentional attack on Lagrange. Some sort of widespread CPV event.”

Silence fell around the table. Each of us processed this in our own way, whether that was the shock from the clades who had just been roped into the meeting to the exhaustion on Dry Grass’s face, the wariness on Günay’s features to the almost smug satisfaction in Jonas’s. He looked to be almost purring, as though springing this information on everyone present was a joy in its own right.

“So, now that NDAs have been listed and we’ve torn Mr. Strzepek a new one,” he continued after a moment. “Can you tell us what happened?”

“Uh...hold on,” Günay said hoarsely. She reached out of view of the AVEC recorder to grab a bottle of water, taking a long

drink. She seemed to be buying time, organizing her thoughts, consulting her HUD. “Promise you won’t tear me a new one?”

I was caught off guard by the humor, but many of the others around the table chuckled.

“I will promise no such thing,” Answers Will Not Help said, giggling.

Dry Grass elbowed her in the side. “Do not listen to her, my dear. She is a snot. You are fine, my dear. No tearing, promise.”

The systech chuckled nervously, nodding. “Well, alright. Then yeah, Jonas has it. As far as we can tell, there was a sort of CPV bomb set off right at midnight on New Year’s Eve, 2399 — or 2400; I can never remember which one gets midnight — which caused a full crash of all instances in less than ten seconds. With the crash, there was a spike in resource usage and then a precipitous drop.”

“I’m still confused about that,” Debarre said. “I thought CPV had to be tailored to a single instance or any of their forks that hadn’t individuated much. How is it someone was able to blast the whole System?”

“We didn’t understand it either. Hell, we didn’t really understand how CPV worked up until recently. It *shouldn’t* work. It shouldn’t even be possible in the first place.” Günay made a few gestures, doubtless reorganizing some notes in her HUD. “But whatever. Someone figured it out well enough to generalize it and took out everyone on Lagrange.”

“And who is this ‘someone’?” Selena asked. “The phys-side feeds are being ungated, but it’s a firehose of information to sort through to try and find anything of use.”

“Yeah, I think they — The System Consortium — clamped down pretty tight. I’m just learning about this myself, since I just got access to the files a few hours ago. Let’s see...” She frowned, continued in the tone of someone reading aloud, “Okay. The Our Brightest Lights Collective claimed responsibility for the attack exactly thirty seconds *before* it occurred via a message to every executive on the System Consortium board, as well as sev-

eral major feeds, all of which were censored before being made public. The OBLC named the mechanism, provided a detailed timeline of events, and offered a list of names of individuals — or “individuals”, I guess — and their roles in the execution of this plan. All one hundred members of the collective have been apprehended, though in the past year, two have managed to end their own lives.”

Answers Will Not Help spoke up during a break in the recitation. “Is there more information on this collective? Are they conservatives? How tight is their integration? Do they mimic clades like the old-style collectives?”

“Oh, uh, one moment, I’ll look that up once I’m finished,” Günay said. “It goes on to say that, through investigation, members from several other collectives were implicated and were also detained. During one of the System restarts between the Century Attack, as we’ve been calling it, and now, this information was confirmed by having an investigator sys-side fork rapidly to gather information and take action where needed. They were provided with emergency global ACLs and, once they found the perpetrator, they locked them in an unpopulated airlocked implementation of the System.”

“The System was restarted more than once?” Debarre asked, taken aback.

She nodded. “About thirty times, I think. We had three shifts working on it for more than a year, remember. We just rolled memories back each time.”

“But wouldn’t the bomb or whatever just go off again every time?”

“It did the first two times, yeah,” Günay said with a shrug. “Until we patched out the CPV vulnerability.”

Dry Grass let out a surprised laugh. “Wait, you *patched out* CPV? Entirely?”

“Well, yeah, we kind of had to, otherwise we’d either have to reconstruct everyone with a memory of crashing, or the same thing would keep happening every time the perpetrator was re-

constructed. It took us a good four months of total System downtime working all three shifts to get it done.”

Jonas Ko, one of the two Jonases sitting at the table, had been steadily frowning more and more through the conversation, resting his chin on folded hands. Finally, he sat up straight and looked to Answers Will Not Help. “Hey, can I?”

The Odist let out a groan and kneaded the heels of her palms against her eyes for a moment before leaning back in her chair. “Fuck it. Why not? Might as fucking well.”

Both forked, and the up-tree instances stepped around the table to face each other. Jonas Ko summoned up a small pocket knife, explaining as he did so. “So, if you’ve read any of the scandalous works about us, you can probably guess that we all have CPV mixed up for each other. It’s nothing as grand as the stories make it sound like, though; just a way for us to keep each other in check and occasionally play around.”

Before anyone had a chance to ask any further questions, he swiped out with the knife, catching Answers Will Not Help in the cheek, leaving a gash that quickly welled up with blood. There was no noise from the Odist for a few moments before she finally let out a shaky breath, sounding almost content.

There was, notably, no crashing. She simply dabbed at her cheek, inspected the blood on her fingertips, grinned wildly to Jonas, and said, “Oh, we are so fucked,” and then quit, followed shortly by the second Jonas.

Günay, like many of the rest of us, had pushed herself away from whatever table she had been sitting at, looking horrified at the casual violence before her. “What the fuck?” she whispered, eyes wide.

“There is still an outstanding conversation about this collective, Günay,” the remaining instance of Answers Will Not Help said breezily. “Can you tell us more about them?”

The systech stared, mouth open, for a moment, then slowly pulled herself back to her desk. “Uh...right,” she mumbled, hiding some complex emotion by taking another long drink of wa-

ter. “The OBLC describe themselves as fundamentalists, in the sense of returning humanity to its fundamentals, and pride themselves on very tight integration.”

“‘Integration?’” Debarre asked, tilting his head, a particularly animalistic gesture on his musteline features. “I haven’t kept up on collectives at all. Don’t make any sense to me.”

“Groups of people who aim to live as a hive-mind of sorts,” Selena explained. “They use tech from their implants to force alignment in ideals, or even just nudge complete thoughts into place for everyone. It’s almost a religious thing for them.”

“It is a religion thing for many,” Answers Will Not Help added. “The ideals they try to live into tend to be high-minded conceptualizations of God or life or the way things ‘should’ be. It used to be that they would try to mimic clades in terms of structure, but their idea of what a clade was is batshit insane.”

Selena nodded, picking up once more. “The clade analogy was far more common before AVEC. Answers Will Not Help asking that is a way of asking”are they old and batty or young and insane?“ ”

Günay, who had been watching the explanation with something akin to amusement, said, “A lot of that is borne out of just not having a clue how things work, sys-side. I’m a systech, and you don’t make sense to me at all.”

“Goes both ways, trust me,” Debarre said, laughing. “None of this makes sense to me, either, but then I’m the second oldest person in the room.”

She grinned, nodding. “Well, even if you don’t make any sense, I still like you all.”

“We like you, too, Günay,” Dry Grass said, stretching her arms over her head. “It is nice to have someone who is not just trying to keep the bureaucratic definition of peace to talk to. Those conversations are for Jonas and Debarre and so on.”

“Unfortunately,” Debarre murmured.

“I would like to return to the topic of us still being alive people,” she continued, smirking at the weasel. “So the System was

restarted thirty or so times in the year-and-change we do not remember. CPV was patched out entirely. A collective tried to kill 2.3 trillion people. We are only just now getting access to extrasystem communications. What have Castor and Pollux been told about this?”

“Right,” Günay said, sitting up straighter. “We told them at first that there was a communications issue, and then expanded on that later, once the scale became evident. We said that there had been a massive outage at the Lagrange station, that there were no deaths or anything, but that Lagrange itself was down.”

“And what did they say?”

“Well, it’s hard to have a conversation with people almost four months away,” she hedged. “So I guess we drip-fed information over time. I don’t know the specifics; I really am just a systech.”

Dry Grass smiled kindly. “Of course, Günay. What did they say in return?”

“To us? A lot of panicked messages requesting as many updates we could give them. Of course, by then, the messages were eight months out of date, and we’d been sending them daily updates on the status of Lagrange for quite a while. They were broken down into buckets based on content: personal, political, technical, and vague threats.” She smiled wryly. “I only really know all of that because I was privy to the technical bucket. SERG on both of the LVs activated in force and started throwing ideas at us as fast as they could. They were mostly not of help, given the delay, but some of them helped. They brought casualties down from 15%.”

ANDRÉA CHECK

I started to do the math in my head, but Harvey blurted out, “345 billion! Holy shit! You’ve gotta be fucking kidding me.”

Günay shrugged helplessly. “We were doing the best we could from phys-side. They had the benefit of being sys-side, and

also working without phys-side intervention for like...seventy-five years, you know?"

Shaking his head, Harvey mumbled, "Still, that's fucking wild."

"Were there any other changes that were made?" Dry Grass asked. "You patched out CPV, learned plenty more about instance recovery, managed to turn back memories for trillions of people..."

"Yeah, uh...there's a whole laundry list, one second."

We waited as patiently as we could while the systech tallied up various changes.

"I cannot believe it has taken them this long to patch out CPV," Dry Grass sent Sedge and I.

"That's the one that got a bunch of your cocladists, right?" I asked.

"Well, 'got' is perhaps not a great word for it. Qoheleth was assassinated using CPV loaded into a syringe and a hundred or so instances of Sasha, back when she was True Name, were murdered by Jonas," she sent. "But also it is something that some of us have used intentionally for various reasons. Dear, Also, *The Tree That Was Felled*, our very weird instance artist, included it quite often in its exhibitions, and *What Gifts We Give We Give In Death* tried using it in some games they were designing, but it was seen as too transgressive and was roundly shut down."

Sedge stifled a giggle beside me. "You guys are all weird, love."

Dry Grass smiled proudly over at us. "And you love it, my--"

She cut off as Günar cleared her throat. "Alright, I have a list of changes", she said, and began reading off a list that appeared in translucent letters against the front of the AVEC stage area. "CPV was patched out; ACL permissions were hardened for sim isolation, allowing for locking cladists *in* sims as well as out of them; storage was optimized; some physical components were replaced, no clue which; AVEC improvements; Ansible improvements; merging improvements; and SERG tools refined. There's a slew of others we're waiting on confirmation from you all before implementing: improvements to perisystem clade listing

that would provide better statistics on who all is extant, which I guess has privacy ramifications; a solution for splitting the physical components of the System hardware was successfully tested, but that will mean production and deployment time, as well as downtime; limited per-sim Artemis-style skew; and some political tools to reduce anarchy.”

“Reduce *anarchy*?” Jonas Fa said, snorting. “Fuck off with that.”

She held up her hands defensively. “Hey, like I said, it’s just a change, and I’m just a tech.”

“I am sorry, Günay,” Dry Grass said. “You are right that that is a conversation for another time. Tell us about these ACL improvements and merging improvements? Those are likely to be the most relevant to everyone here.”

“Right,” she said, frowning. “Well, the ACL improvements allow locking cladists within sims. We needed this to contain the perpetrator, but left it in place. We came up with a suggested protocol, though, that would mean a two step approval process — phys-side and sys-side — as well as mandatory waiting period. It’s disabled for now, but we can re-enable it whenever.”

“The merge improvements involve finer-grained conflict management, which is more just an efficiency thing; we’re told nothing changed subjectively. We also enabled cross-tree merging.”

“Holy shit,” Selena murmured. “Cross-tree merging sounds wild.”

“It seemed like it wouldn’t be that big of a deal.”

“It really fucking is,” Answers Will Not Help said, and despite the hint of joviality that seemed permanently lodged in her tone, her expression was frighteningly serious. “Especially if there is no limit on how far diverged the cross-tree instances are.”

“There isn’t, no,” Günay said cautiously. “Why’s it a big deal?”

“Shitloads of reasons,” Jonas Ko said. “It changes the nature

of a clade a way from a strict tree to a cloud, a gestalt. Have you published this anywhere yet?"

She shook her head.

"Good. Don't."

"Uh...alright," Günay said. "I'll bump that up to admin, though. I don't have control over that."

"Alright. I'll tear Jakob another one, then," Jonas Ko said, smirking.

Günay winced. "Glad I'm not on admin," she mumbled. "Is there anything else, though? I gotta get back to work. Shame, I like you all more than work."

"We like you too," Dry Grass said, smiling. "If you ever want to upload, you have a place up here set for you."

"I may have to before long. I like you guys, but you've made my life hell with admin," she said, laughing.

"Well, you'll have a place on SERG," Harvey said, grinning lopsidedly. "If you're not sick of dealing with this shit, that is."

Once we'd made our goodbyes and the AVEC call had ended, we sat in silence for nearly a minute. Finally, Sedge said, "Well, holy shit."

Laughter around the table.

"Holy shit, indeed, love," Dry Grass said, scooting her chair closer to rest her head on Sedge's shoulder. "I need a fucking nap." The next two days passed in relative peace.

There were a few more meetings with phys-side, usually with just Günay, but sometimes Jakob or another administrator peeked in. They all seemed to be rather cowed by the sys-side administration, such as it was. I chalked this up — later confirmed by Dry Grass — that there had been other talks beside between the latent Temporary Administrative Council and the System Consortium, which had been rather tense.

Although phys-side remained in control of several aspects, they had quickly ceded many of these to us once more. This included ungating all communication between Lagrange and both of the LVs, leading to a flood of messages from friends and long-

diverged cocladists. Reed#Castor sent me several panicked messages, as had the rest of the clade.

This included Marsh, both on Castor and Pollux.

There followed a rather tense meeting with all of the Marshans remaining on Lagrange, as well as Vos and Pierre. Confronted with the fact that two versions of Marsh lived on, inaccessible, we all fell into a tailspin, each in our own way.

Pierre and Vos were left in tears, quite understandably. The force with which the simple message hit them doubtless left a reminder that their shared partner was now gone, and yet still existed beyond reach.

Lily remained stoic and Rush silent, while Tule, Sedge, and I had similar reactions. We were confused. We were unable to handle our emotions, much less put a finger on them. How could we? We were unmoored, here on Lagrange, and yet it was a plain fact that such was not the case some four light-months away. We could message them, we could send them a summary of how we felt, but what good would that do? What would it gain us to send tearful messages to them when we wouldn't hear back for more than eight months?

The three of us agreed that we'd hold off until we knew more, both about the situation and our reactions.

None of us knew anyone phys-side. We didn't have the luxury of communications separated by just over two seconds. We didn't have AVEC to help us out at all. All of our friends had either uploaded or died without having done so, and none of our family cared enough to talk to their grandson with however many 'greats' preceded that relationship.

Hanne, however was in yet a different situation. While her parents had long since died, her siblings had not, though by now they were quite old. Their communications were tearful reconstructions, hasty requests for just what the fuck had happened.

As for that particular question, we learned quite a bit more.

The process of restarting Lagrange included a new wrinkle. Every time they restarted, more and more instances seemed to

be unrecoverable. Even with the help that the LVs had provided in drastically reducing the number of unrecoverable instances, each time the System was brought up, the number of crashes seemed to increase. There was a core of about twenty billion that remained unrecoverable no matter what, but the number climbed by hundreds of millions with each restart, with different instances among the remainder.

Dry Grass had been particularly affected by this. Her up-tree, *In The Wind*, seemed to have been instrumental in helping returning functionality, and yet had not managed to make it through the last three restarts.

On hearing this news, she disappeared for nearly twelve hours, all of her instances merging back down into one singular self. When she returned, she at least looked more well-rested than she had in days, explaining that she had spent nearly all of that time in bed.

She and I also started spending more time together, with the next two lunches being just the two of us together. While I had memories of learning all about her through Tule, she was keen on learning about me in turn. She wanted to know what my take was on why Marsh had uploaded, explaining that both Cress and Tule had differing thoughts on the matter. She wanted to know why it was that I had slipped back into that transmasculine identity. She wanted to know how it was that Hanne and I had found each other, had fallen in love.

I mostly wanted to know — though I never asked — how it was that I was falling so rapidly for her in turn. I turned that question over and over in my head, leaning on it for comfort whenever thoughts of Marsh struggled to overwhelm me.

When at last the group of representative clades met up again, we were joined by yet another Odist, *I Cannot Stop Myself From Speaking*, a bobcat who moved silently on soft-padded paws, whose voice was quiet and yet demanding of attention.

Also joining us on phys-side were Günay and Jakub, along with one of the information security officers, a dour person

named en4, who introduced himself as a member of The London Cohort of New Zealots, a conservative collective from whom the Our Brightest Lights Collective had split. LCNZ had apparently proven itself to not be conservative enough, and the far more militant OBLC had left to join a coalition of fundamentalist collectives and like-minded individuals in order to orchestrate the Century Attack.

“The LCNZ sternly and unquestionably disavows the action of the OBLC,” they began. “Their actions are truly reprehensible, and despite our generally distant relationship with the System, we harbor no ill-will to any of you, even the Ode and Jonas clades.”

“Even us?” Answers Will Not Help asked, a sneer painted on her face, voice dripping with sarcasm. “*Even us?* What is it that we have ever done to you, my dear?”

Their face remained impassive. “We, like the original Zealot Cohorts, hold a rather poor opinion of those named in the Bălans’ *An Expanded History of Our World*. We acknowledge that it was a sensationalized work, as expressed in the Bălans’ own words, and those of Sasha in her *Ode*, but it is hard to let go of prejudices.”

Answers Will Not Help scoffed.

“We stand by our earlier statement,” en4 said, offering a hint of a bow from their seat. They were calling in from Earth, so their reactions remained on a delay, which took some getting used to. “We harbor no ill-will, we just do not like the manipulative tactics used by the eighth stanza in particular.”

“We will come back to that,” she replied coldly. “We will have words.”

“So be it.”

“We have spoken with the quarantined instance of the attacker several times,” Jakub said, picking up the conversation smoothly. “They remain alive in this instance of the restart, although in previous restarts, they quit immediately on realizing that the bomb failed to detonate.”

“Why do they remain alive this iteration?”

“We turned off their ability to quit,” Günay said.

“That’s possible?” Harvey asked. “Why the fuck would that even be a thing?”

“Oh, it’s always been possible,” she replied, shrugging. “It’s another one of those privacy concerns, I guess. We left them in the DMZ used for testing the LVs, the one that turned into Convergence on Castor.”

“That is why I am here,” Speaking said, standing and bowing to the attendees at the table. Not even her clothing rustled, no sound of fabric on fur. “I have been the sys-side representative interviewing them.”

“Yes,” Jakub said. “One representative each: en4 and Speaking.”

“Can you tell us more about them?” Sedge asked. “I want to know who would even do something like this.”

Speaking nodded, returning to her seat. “Yes. They go by 8-stanza-1, a reference to the Ode from which we take our names. In fact their whole collective refers to the Ode. This is why they limit their membership to one hundred members.”

“Wild,” Debarre murmured. “Y’all are weird, but that’s way, way weirder.”

“Weird indeed,” Jonas Fa said, staring intently at en4.

They smiled blandly. “Yes, we took inspiration for our naming scheme from your clade.”

“Fucking gross.”

Smile unwavering, en4 said, “No comment on that decision at this time.”

“Why do you even work with the System if you hate us so much?”

“Because 2.3 billion people live on the System,” they said.

“That is 2.3 trillion lives. We agree on that, yes?”

Nods around the table.

“2.3 trillion lives, then. 2.3 trillion lives that were taken from us here on Earth. 2.3 trillion minds in TODO COUNT uploads that

might have lived full lives here among us phys-side. We resent that they were, and yet our only recourse is — must be — to keep them alive, to ensure that they at least remain among the living in some form or another.” Their gaze drifted to the three present Odists. “We, too, desire nothing but the stability and continuity of the System, just for different reasons. This instance of us is an ISO specifically to live up to our own principles.”

All three of the Odists nodded, expressions varying from serious to vaguely disgusted.

“Regardless of our opinions of each other,” Speaking said, picking up the prior thread. “Speaking with 8-stanza-1 was a frustrating experience. I am told that I was the instance sent to discover their presence, relying on tools developed by my down-tree instance, I Have Sight But Cannot See. I have no memory of this, but it does sound like something that I would do.”

“What about it was frustrating?” Selena asked.

“They are...emotional. Very emotional. Understanding their voice through their sobs or wild laughter was difficult. All the same, they are a very grounded individual. They speak concisely and with no misdirection in their words.” She shrugged. “They just speak in coherent, well-formed sentences and paragraphs about untrue things. Their every word is part of a lie. Their very existence is built up around lies. They breathe lies out on every breath.”

“They are very tightly integrated,” en4 said. “They all speak thus. This is why they split away from us. It was a mutual decision.”

“You kicked them out?” Jonas Ko asked.

They shrugged eloquently.

“Despite these lies,” Speaking continued, “I was able to glean plenty. All I needed to do was assume that every statement was false. en4 confirmed much of this from the LCNZ’s view. They — the OBLC — differ from the LCNZ in the sense that they believe each of those lives is a life lost, rather than a life preserved. Their belief that the lives here on the System are, and I quote,” shadows

and negations of souls”. They believe that clades are negations and that up-tree instances are shadows.”

“Yes,” en4 said. “They believe that each of these negations negates a life phys-side, and thus the only way they could even bring into balance, much less overcome, the negation offered by the System is to destroy it. They hoped that by destroying you, they would give those who remained phys-side a chance at heaven.”

“You said there were a group of collectives that worked together on this, though, right?” Selena asked.

“Collectives and individuals, yes.”

“Did they all believe this sort of thing?”

They shook their head. “Not at all. Many of them struggled with the effects that the uploading of individuals had on worsening the climate catastrophe.”

“That’s not on us, though.”

“Is it not?” they asked mildly. “For a while, it was quite popular for individuals to upload in order to work on the climate catastrophe, and yet many of them would disappear shortly after doing so, falling into new habits, new friend groups. It is only in past few decades that the pace of climate change was reversed.”

“Yes, but hasn’t much of that changed thanks to the Artemis data dump?” Boiling Maw dos Riãos, another of the furies sitting at the table asked. They were some sort of mustelid, though larger and far more thickly-furred than Debarre. “Most of that effort took place sys-side as well.”

“I will answer, but after this, we should return to the topic of the Century Attack,” en4 replied. “Many of these collectives — of which the LCNZ is one — believe that this is a side effect of the Artemisians’ convergence, rather than any effort from those who uploaded in order to help.”

“That’s not—” Boiling Maw started, anger painting her face. She paused, took a deep breath, and settled back into her seat, sulking. “Right. Moving on.”

Speaking bowed respectfully to the Riä. “Yes, though perhaps there will be time for a separate conversation on this matter at another time. For now, 8-stanza-1 spoke of these negations and shadows and of their reasoning, and while I am left to guess at the negations of their own statements, I am reasonably confident of at least their reasoning for attacking Lagrange, thanks to en4’s confirmations. They wished to reopen the gates of heaven to humanity. I also believe that those other collectives and individuals who worked behind the scenes on this attack had their own reasons, and as the investigation continues, both with me working sys-side and Answers Will Not Help coordinating with phys-side, we will learn more and publish the results to the feeds.”

Dry Grass frowned. “Are you sure that that is wise? Does the entirety of Lagrange need to know these reasons?”

“The eighth stanza and Jonas clade have made their decision. I do not care.”

“Why not?”

“Because it is out of my hands. It is outside my bailiwick. That is their role, their responsibility to manage spin.”

“We’re working on it,” Jonas Ko said. “The goal is to spin it so as to discourage anything like this going forward, not give anyone ideas.”

“That was going to be my next question,” Dry Grass said. “If there are other sympathetic uploads or anyone else phys-side, would it not be dangerous to publish that information?”

“We are on it, my dear,” Answers Will Not Help said, laughing.

“So,” I said after the conversation drifted into silence. “What do we do now?”

“Mourn,” Dry Grass said. “Work and mourn.”

The shift from the universal sorrows of Lagrange to the immediate and personal sorrow of grieving over Marsh had been evi-

dent evident every time I found myself alone, disentangled from the rest of the clade, from Hanne and Dry Grass and problems larger than myself. Now that we were all gathered here, though, all the Marshans and a few close others standing around a simple black sphere, that sudden immediacy of loss clutched at my throat and would not let me go.

The sphere, we'd been told, was all that remained of Marsh. It was their core dump. It was what remained of their corrupted existence here on Lagrange.

On examination, more information became available. The closer I looked at it, the more I seemed to know. The data was something less than visible, something more than remembering. Staring at the sphere was a process of discovering, of learning that it was a core dump, that it was one belonging to Marsh in particular, that it had been created in the first seconds of 2400, that it was marked as unrecoverable, that its nature was one of corruption, that it was tainted with the remnants of contraproprioceptive virus. So much information flew at me that I couldn't tell what it all meant, not least of which because the more I learned, the more the tears clouded my vision and the black sphere became a hole in the world.

In our world.

In *my* world.

There was some part of me that had hoped, however foolishly, that Marsh was simply locked in some enhanced cone of silence somewhere, working on this or that, rejecting all incoming sensorium data. Dry Grass, however, assured us that this was not the case, though, that eir name had been all but wiped from the System along with all of the rest of their existence, and then offered to bring us to their core dump.

The room in which the cores were stored was beyond vast. It was an unending space, a three dimensional grid With the cores stored at one meter intervals in all directions. The default spawn point was a floating platform in the middle of a vast sphere, devoid of cores, right in the center of it all.

“The room is set to dark; no one can see us or touch us, no matter how many instances were here,” Dry Grass said quietly, then smiled wryly. “We could scream bloody murder and no one would hear, and yet it has the feeling of a graveyard, does it not?”

None of us spoke.

“Right,” she whispered, expression falling.

“How do we get to their core?” I asked

Dry Grass gestured to a faint circle embossed in the floor, then stepped within its bounds. “Marsh of the Marsh clade,” she said. “Dry Grass of the Ode clade on behalf of the Marsh clade, systech ID #338d842.”

There was a quiet chime of acknowledgment and, in the direction that Dry Grass faced, a black ring formed opening out onto some other part of the sim, hundreds of the untold billions of cores filling the view. The platform drifted slowly towards the portal, and then through.

The cores were insubstantial spheres, ghostly, translucent. Little double handfuls of wispy lives cut short.

All except one.

Right before the platform sat one core more real than the rest, a matte *Eigengrau* with a faint blue haze around it. The platform drifted forward until it rested at the center before Dry Grass at chest level, us Marshans — along with Pierre and Vos who had also joined us — parting to make way for it.

As the platform came to a stop, the blue haze disappeared and one more chime of acknowledgement sounded. “Marsh of the Marsh clade,” an androgynous voice spoke. “Crashed via CPV January 1, 2400, 00:00:03. Core deemed corrupt and unrecoverable by automated process, confirmed by an instance of In The Wind of her own clade, systech ID #88aa6e8.”

“An instance of...” Dry Grass started, then blanched. “How many instances of In The Wind existed during this process of confirmation?”

“520,000,” the voice said. “A total of two billion instances have been marked as confirming corrupted cores.”

“And none of her were recovered?”

“There is one core for In The Wind of her own clade. The clade directory lists no up-tree instances.”

“Where is—”

“Dry Grass,” Lily growled through gritted teeth. “Shut the fuck up.”

She hesitated, some complex set of emotions crossing her face, bowed unsteadily, and then moved to stand by Cress, Tule, and I. Whether intentional or not, she stood so that Lily was blocked from sight by the three of us.

It had to be intentional, and that fact, seeing her cowed for the first time in my memory — mine and Tule’s — had me bristling. Both Tule and Cress appeared to be biting back responses of their own.

For her part, Lily remained tense, standing rigid and still. Even as she began to cry, she did so without moving, without making a sound, tears simply welling up and coursing down her cheeks. “Rush,” she croaked.

Looking anxiously between Lily and Dry Grass, we nodded slowly. “Alright,” we murmured, then stepped forward and tentatively touched the sphere. “I had some words prepared, but I’m not sure I can remember them all.”

Sedge sighed and stepped forward to join us. “Hey, it’s alright,” she said, resting her hand on my wrist. “Just talk to them if you want.”

We clutched at the sphere, though it remained stolidly immobile. “Uh...okay,” we mumbled. “I guess I’m just sorry this happened. Sorry in a commiseration way. Sorry that we’re here at all, standing around like a bunch of jerks while you’re...uh, gone, or whatever.” We trailed off with a nervous laugh, shoulders sagging. “But I’ll miss you, Marsh. We all will. We’re all here, you know. All of your clade. Pierre and Vos are here, too, and Dry Grass, all wishing that you were here with us. I’m sorry you’re not, I’m sorry you didn’t get our merges first.”

Cress sniffled. Lily continued to stare blankly ahead through

her tears. None of the three of us immediate up-tree instances had managed to merge down.

When Rush didn't continue, Sedge leaned to hug awkwardly around vis shoulders. Ve stiffened, returned the hug, and then stepped away from the sphere again, rubbing vis hands against vis shirt.

Sedge took her turn resting her hands atop the core. She stood a while in silence, shifting her weight from foot to foot. Finally, she said, "Twenty-three billion dead, but you were ours."

She opened her mouth to continue, shook her head, and then stepped back to join me, Tule, and Cress. Pierre moaned softly, slouching against Vos's side.

Tule began to step forward, but Lily held up a hand. "Stop," she whispered. "Not you. Not yet."

"Lily, I—"

"Not yet," she repeated, then stepped forward. Rather than rest her hands gently on the sphere of the core dump, she clutched it tightly. Her face contorted into a grimace, but she spoke through the tears, through whatever emotion it was that held her in its grip. "You died. You were *killed*. You were killed by those who thought we were less than them, who thought they could control the world to such an extent that our lives became nothing to them. Just so much garbage."

I saw Dry Grass wince out of the corner of my eye. Whether Lily was talking about the collective that had seen fit to attack the System, this Our Brightest Lights Collective, or the Ode clade and all of their supposed machinations wasn't clear to me, but Dry Grass certainly seemed to take the words to heart. I held out my hand to her, but she shook her head subtly.

"Our lives were nothing, so your life was nothing, too," Lily continued. "Now here we are, like Rush said, standing whatever's left of you like a bunch of jerks who get to live on. Who the fuck cares that some huge majority gets to live on while so many people are just fucking...gone?"

She looked as though she wanted to say more, but her words

petered out and she simply stared, unseeing, at the core she held onto. Finally, she let go of the sphere and stumbled back to where she had been standing before.

I started to step forward next, eyes locked on Lily.

“Stop,” she whispered. “Vos first.”

“What the—”

“Shut up. Vos first.”

I glanced over to Vos, who was glaring at Lily. “What are you doing, Lily?”

“Go,” she said hoarsely.

“If you don’t want to be here,” Vos said, voice flat, dangerous. “You can leave.”

“I want you to fucking go,” Lily snapped. “I want to hear about Marsh from someone who knew them better than any of us, these last however many decades.”

“First Cress, now Reed?” She scoffed. “Do you think they don’t know about Marsh?”

“Certainly not as much as you did, if they’re all dating one of them!”

“Get out.”

“It’s not your—”

“Get out!” Vos shouted. “Get out get out *get out!*”

Pierre fell to his knees, clutching his head in his hands. The movement seemed to startle Lily to awareness and, with a stricken look on her face, she stepped from the sim.

Unsure of what drove me to do so, I forked and quickly followed her, guessing that she had returned home. I’d let my down-tree instance stay to say his words, to hear everyone else’s.

My guess was correct, as there she was, already whirling on me at the notification of my arrival. “Oh, fuck you, Reed. Don’t even give me a chance to lock the door!” she shouted.

“Lily, what the fuck is wrong with you?” I hollered back. “You can’t just cut Tule, Cress, and I out of Marsh’s fucking funeral just because you don’t like Dry Grass!”

“Fucking *watch me.*”

Although I immediately regretted it, I slapped her across the cheek. Hard. I think I regretted it even in the moment, as soon as I felt my hand move. “No,” I said. “I won’t watch you try to rip the clade in two just like that, just like it’s your choice for the rest of us. It’s not like either Sedge or Rush care.”

“Well they fucking should!” she yelled, clutching at her cheek. “They fucking should. You heard what they said. You heard it first-hand, even! 8-stanza-1, right? You read the books, you know as much as the rest of us. I don’t fucking care if True Name is Sasha or whatever now, she’s the one who fucked this whole thing up. She’s the one who lied and manipulated all of us. What are we supposed to do about that? Huh?! Christ, that hurt...”

“Nothing, Lily! Jesus Christ. You act like the whole Ode clade just ruined everything.”

“They did!”

I followed after her as she stomped into the kitchen, watched as she grabbed a glass and somehow managed to angrily fill it with water from the faucet, still rubbing her cheek where I’d struck.

“They really didn’t,” I sneered. “You...what, read the *History* and decided that, without exception, they’re all fucking evil? Even after everything? Even after all the other books explained what happened?”

“Fuck the other books,” she said, more to the faucet than to me. “Fuck the Ode clade, and fuck you too. Fuck you and fuck Cress and fuck Tule. It’s really fucking sad, watching you three get taken for a ride, the same manipulation that fucked us all.”

Her anger still burned hot, I knew, but not as much as it had when first we’d arrived. I just needed to outlast it. Doing so by parking myself in my own anger probably wasn’t the best way to do it, but it felt too good, too cathartic to let go of. “We’re not getting taken for a ride, whatever that means. We’re just grown up enough to realize that a bunch of actors did what actors do

and pretended.” I scoffed. “They *pretended*, Lily. That’s just what they do.”

“So it’s just a game, then?” she shot back, though I could tell she was flagging. “Just a game that led to a bunch of fucking psychos killing billions of people?”

“They lost people too, Lily. So True Name did some stupid stuff back in the early days; what of it? She explained it all, said how much of it was just playing at politics without doing much beyond making us look interesting to phys-side. Now a bunch of them are dead and—”

“Two of them are dead,” she grumbled. “Two and however many up-trees.”

“Yeah, real lives, Lily.”

Her shoulders slumped and she finally settled into silence. After a moment, she drank down the water in three coarse gulps, leading to her coughing and spluttering.

I waited it out.

“Look at us, Reed,” she said, laughing humorlessly. “Fighting at a funeral like a real fucking family, and me swallowing my water wrong like a real fucking idiot.”

I sighed. “Right, yeah. Are we at least done, though?”

She waved away the glass and nodded. “Yeah, sure. I’m going to stay here, but I’ll try to at least keep this to myself in the future.”

“I’d prefer if you got over it,” I said, trying to keep the anger from creeping back into my voice. “It’s not like they’re going anywhere.”

She shrugged, chin already drooping to her chest as anger was replaced with something that looked perilously close to exhaustion. I wondered, not for the first time, if the rest of the clade was struggling with sleep as much as I was. “No promises. Pretty fucking hard to let go of,” she muttered. “But I’ll try.”

“Well, alright. Just no more shouting, at least. Do you want to come back to the gathering?”

She hesitated, shook her head, and then sighed. “I probably should.”

“You definitely should. Just let us do our thing, and listen, I guess.”

She nodded. “Can you ask Vos if I can come back, at least? I was afraid she was going to deck me,” she said, then smiled lopsidedly at me. “Not like I escaped that particular fate.”

I winced. “Yeah. Sorry about that, Lily.”

“Nah, it’s okay. I was being kind of a bitch.”

“No comment.” I sent off a sensorium ping to Vos and got a halfhearted shrug in response. “I think you can come back, though. Probably best to just chill, though, right?”

“Yeah, okay.”

I took her hand in mind and sent a message to my down-tree to recall us to the sim, blipping into being close to where we had stood when we left. Lily trudged back to her place and I quit to merge back down.

I merged the memories of the fight with Lily wholesale, letting them mingle with Vos’s words of love and loss. There was a part of me that regretted it, that they should be so tainted, but both sets of memories were important.

Pierre declined to speak.

That left just Cress, Tule, and I. Cress went first, stepping forward to rest her hands against the core, and then resting her forehead against the back of its hands. “There’s too much bullshit going on, so here’s a story.

“Back when Reed, Lily, and I were forked, Marsh was still presenting cis male, and so the three of us were to be the aspects of them that went in different directions. Lily headed back cis fem, Reed went back to the trans masc presentation we had phys-side, and I went somewhere neutral.

“I started out with they/them pronouns, leaning into androgyny as I’d always pictured it, something more tomboyish than anything, but over time, that began to drift, and I decided that ‘neutral’ was the wrong answer to the question of gender.

Gender was the wrong question. Fuck it, I say.” It laughed, shrugging. “The next time I merged down, Marsh sent me a message that was just them laughing, then requested that we use they/them for them.”

It straightened up again, smiling. “So you see? It’s all my fault they wound up how they did.”

The rest of the clade grinned. Both Vos and Pierre laughed.

After Cress, Tule stepped forward and stood for nearly five minutes in silence. The wait began expectant, but before long, everyone gathered around the core bowed their heads one by one, settling into something more contemplative. The silence spoke as much as Sedge and Rush’s sorrow, Lily’s anger, Cress’s humor.

When he stepped back, I sighed. “Guess that leaves me,” I said. I could feel exhaustion pulling at my cheeks, pressing against my temples. When I touched the core, I was surprised to find it cool to the touch, dry, almost dusty. “I don’t want to say anything, but Tule already covered that base. I guess you’ve all talked a lot about the past, so I’m not sure I have much to add. I guess I’ll just say that I hope we can find a way forward that doesn’t lead to us feeling terrible forever.”

There were a few nods around the circle, though Pierre only buried his forehead against Vos’s shoulder.

“So I don’t know. Let’s just keep being good to each other, and keep finding ways to stay on top of things.” My words sounded hollow, emotionless. I decided to lean into that feeling directly. “I’m having a hard time connecting emotions to my words, here. I think it’s all super overwhelming, so I guess all I can do is just hope that that’s not always the case.”

Sedge, Tule, and Rush, my up-tree instances, all leaned forward to rest their hands on my shoulders.

“It’s incredibly you to just think about how to manage stuff going forward,” Lily said, no ire in her voice. “That’s just kind of your role in this whole thing, huh?”

I laughed, feeling some of the pressure in my chest fade. “Right, yeah. Manager of the enterprise.”

“Pretty sure that’s me, actually,” Sedge said. “Though I guess I got it from somewhere.”

We all laughed.

We drifted away in small clumps after that. Pierre and Vos returned to Marsh’s home — their home, now — along with Sedge, who said she was going to head back to work. Rush nudged Lily off to a bar, stating that it was high time at least some of us got roaring drunk.

The four of us who remained — me, Cress, Tule, and Dry Grass — stood in silence for a while. There seemed to be little point in saying anything as we processed this impromptu funeral. All that needed to be said had been said, or if not, then it had at least been put on hold in the face of our overwhelming emotions.

I thought of the stages of grief, of Lily’s anger, of the sadness so many of us lingered in, of the bargaining that I knew we all held within us. Perhaps there was some way to get Marsh back. Perhaps there was something we could yet do. Perhaps some combination of the core that remained and all of our memories could lead to some solution. Perhaps this new cross-tree merging held some promise after all.

“I want to see In The Wind,” Dry Grass said eventually, her first words since Lily had told her to shut up. “I want to see what remains, and then I want to go lay down with the three of you, if you will have me.”

I blinked, standing up straighter. “Me?”

She nodded. “If you will have me.”

I thought of so many complex emotions that had plagued me over the last few days — the memories of love, the way they clashed with my memories of distance, the memories of Lily burning up with hatred — and, finally, nodded. “Yeah. Let’s see In The Wind’s core, and then get out of here. Anything to help out after all this will be good.”

I followed Cress, Tule, and Dry Grass back home.

The three of them lived in a narrow brownstone of sorts, full of the dark wood and plush carpets that I knew well from Marsh's house, though the walls were lined — in some places all but completely covered — with paintings. The vast majority were of landscapes skillfully done in watercolor or acrylics, but each of which was interrupted with a shape of black so deep that it seemed to eat any and all light around it. Beyond just reflecting zero light, it pulled greedily at light that even got close.

Also spaced out through the house were various *objets d'art* I recognized from Hanne's work. Dry Grass explained that both paintings and art were from her cocladists Motes and Warmth In Fire. "My little ones," she called them, which fit well, given what I knew of Warmth In Fire.

She sounded proud of them, as a mother would of her children, which took me a minute to piece together. There were no shortage of family dynamics within the System — after all, old and young alike upload, and upload dates can be decades or centuries apart — though it was relatively rare that they were so strong within a clade where everyone was by necessity the same age. What guardianship we Marshans felt over Cress, the smallest among us, only barely seemed to scratch the surface of the depth of Dry Grasses feelings over *And We Are The Motes In The Stage-Lights* and *Which Offers Heat And Warmth In Fire*. We were protective of Cress, she was hanging artwork on her fridge door and walls.

Proud, yes, but the overriding exhaustion — physical and emotional — kept her expression muted and heavy, and she soon requested that we lay down as we had planned.

The bed up in the second-storey bedroom was already wide, but Cress and Tule pulled on either edge to stretch it out by another half meter or so while Dry Grass all put faceplanted onto

the mattress. She elbow-crawled her way up until her head was at least resting on a pillow before letting out a muffled groan.

Cress and Tule followed after, moving as though they knew the parts they were to play. Dry Grass's pillow was quickly shifted up into Tule's lap while Cress settled beside her, rubbing on her shoulders. I knew from Tule's memories, still slotting their way in along with my own, that this was a somewhat regular occurrence.

I stood awkwardly by until Cress chuckled and gestured at the open space beside Tule up near the head of the bed. "Just relax, Reed."

"Yes," Dry Grass mumbled. "You do not need to do anything, there is no pressure. We are all just here to unwind, yes? Among friends, yes? I would like to think that this includes you, my dear."

"Right," I said, forcing a chuckle of my own as I awkwardly clambered up onto the bed, leaning against the headboard and hugging my knees against my chest.

We sat — or lay — in silence for a while other than the occasional small noise of contentment from Dry Grass.

Even as we stayed in silence, and Cress and Tule doted on their partner, this woman I had such strong feelings about foisted upon me out of nowhere only a few days prior, I struggled to disentangle my thoughts on the events of the day.

The longer I thought about it, the more surreal the act of having a funeral in the midst of such a disaster felt. Our gathering of nine people standing around an all-but-featureless black orb somewhere in a grid of yet more featureless black orbs was small. Nine people had stood around that core dump: six cocladists, two partners, and a systech who also happened to be a partner of two of those cocladists.

It was so small, and yet even if there had been a hundred people there, a thousand, it would have felt vanishingly tiny in that vast, open space. 23 billion orbs set into a grid, and this one was ours, our double handful of grief.

It was so small, and that vast, open space remained silent, empty. The settings on the sim were such that we would only ever see or hear ourselves in there. There might well be billions of others struggling with their own double handfuls of grief, and yet it would only ever be us.

There was more grief to be felt there, layered beneath the exhaustion, confusion, responsibility, and however many more complex emotions had been caked on top. There would come a time when the ability to simply grieve would be laid bare, I knew, and soon, but it was not yet.

And so we stayed in silence.

Dry Grass was the first to break the silence, mumbling. “In The Wind.”

“What was that, love?” Tule asked, brushing fingers through her hair.

“That was my up-tree instance. In The Wind.” She laughed, choked and hoarse. “I remember the rattle of dry grass in the wind. I picked that up from Louie. Eir clade, os Riãos, did much the same. I thought I was so *clever*.”

Tule, more flexible than I, bent down and kissed her on the cheek. Cress gave her own kiss after. Both of them glanced briefly at me, looking a little sheepish. I couldn’t quite piece together the reason for their looks until I pieced together their confusion — our confusion, since I shared in it — of how I must feel about her.

The compulsion to echo that gesture was certainly there, too. I knew from countless memories the softness of her skin against my lips, I knew what even the briefest touch would mean to her as she worked to process her own loss.

I also knew her only as a friend, only as Dry Grass of the Ode clade, only Cress and Tule’s partner, with whom I had shared only a few dinners.

Thinking rapidly, I opted for a middle ground of squeezing gently on her shoulder. This gained me a rather relaxed-sounding sigh from Dry Grass, and a pleased smile from both

Cress and Tule. Dry Grass shrugged my hand off of her shoulder to instead take it in her own, holding gently.

“Can you tell us about her?” I asked.

After a long moment’s pause, she nodded. “She was the part of me who remained a systech. After I burnt out, I mean. I had grown weary of the mediation and moderation side of the job. I loved the tech, instead. I loved the feeling of being a caretaker for this vast and wonderful world we live in. I did not want to deal with adults bickering at each other over stupid shit. We are the moms of the clade, yes? My stanza? Not the judges and jurors.”

Both Cress and Tule nodded, though the statement largely went over my head.

Perhaps guessing at such, Dry Grass continued, “Each of our stanzas focused on something different. I am sure that much is in the stories you have doubtless read, if Lily’s reaction is anything to go by. She fusses at the eighth and their politics, perhaps the first with their habit of spying, but mine, the sixth, wound up with all of Michelle’s — our root instance — all of her dreams of and desire for motherhood. Motherliness. Caring and cherishing. That is why I have all of that art on the walls: it is all cherished, all lovely creations from Warmth and Motes, the clade’s little ones.”

“So In The Wind was the one who stuck with that moderation?” I asked.

She nodded. “To an extent. She often explained how she would push the moderation duties off onto other systechs. She really was just as focused as I was on the tech side.” She rolled over onto her back so that she could look up to us, transferring my hand in hers from one to the other. “All I wanted to do was take a vacation. I should have known it would wind up far longer than the two weeks I had intended. Michelle had already tried that, and she got an entire clade out of it, after all.

“She usually got what she want, too. She worked the tech side, disentangling crashes and hunting for problematic objects.

She is the one who kept me up to date on the tech side, usually over lunch.” I could hear the smile in her voice as she continued, “Those lunches were something lovely, sandwiches sitting unfinished as we talked and talked and talked about this whole confusing mess we lived in. The politics remained infuriating to me, which I suppose they also did for her, given the way she would rant. Even so, it kept the pilot light lit for me, that I might hear about this System I loved so much.”

Cress nodded. “It must be hard to lose that.”

“It is more than that,” Dry Grass said, sniffing. “I loved her, my dear. She was my sister, my twin. Fuck what my down-tree says, I lost family.”

“I’m sorry,” the three of us mumbled.

She rubbed the back of her free hand against her eyes. “I will mourn the loss of a sister and friend. It will take time, and I can only just touch it briefly now. It is too hot.”

Familiar sensation, I thought, and from their expressions, I surmised that my cocladists were feeling much the same.

“Need some space from it, love?” Tule asked.

“Please.”

He nodded, working on a careful extraction from his role as pillow, replacing his lap with another pillow from the bed as he slid from beneath her. He stretched his arms up over his head, winced at a quiet pop from his neck, and then shifted to lay down beside her instead, arm draped over her front. Cress followed suit, laying down beside Tule and hugging around them both.

I chose to remain sitting for a while, idle gaze settling on the triad beside me, while I thought of the ways in which Dry Grass talked about In The Wind. I tried mapping that onto my own clade. Thinking of Lily like a sister, of Cress like a sibling, felt right in a way that I didn’t expect. While it was difficult to think of Tule as in any way younger than me, despite being my second degree up-tree instance, but perhaps that was due to his lingering similarities to me. After all, Sedge had forked him off shortly after I had forked into her. It was part of the package deal: Sedge

went back to exploring femininity while Tule returned to cis-masculinity. Both of them remained siblings, perhaps because I was their progenitor.

But Marsh? Were they a parent? Were they also a sibling? Some great-grandparent, perhaps? Or were they simply my root instance? All fit to greater or lesser extent.

Finally, the thought ran its course and, left with a curiously numb and empty mind, I slid down to join the other three in laying on the bed, though I kept what I hoped was a polite distance, laying on my back and staring up at the ceiling.

The polite distance lasted for less than a minute before Dry Grass rolled onto her side and draped an arm across my middle. *"If this is uncomfortable, do let me know, Reed,"* she sent in a sensorium message as both Tule and Cress scooted closer to her. *"Otherwise, I am going to try and sleep."*

Tense, I nodded. *"It's...different. Not bad, just going to take some getting used to."*

"Should your boundaries change, then, let me know and I will adapt with them."

I nodded once more, patting the back of her hand where it rested on my side.

"Ooooh, Reeeeed," came the barest hint of a message from Cress, and I peeked an eye open to see it peering over Dry Grass's shoulder, grinning.

I smirked and rolled my eyes. *"Shush, you."*

Tule messaged a few seconds later, including Cress in the message, *"You good, Reed?"*

"Yeah, just taking a bit of getting used to."

"I can imagine," he replied. *"I caught myself feeling a little sorry for dumping this on you, earlier today. Trying to keep in mind that it's your fault, not mine."*

I did my best to keep my laughter to myself. Dry Grass's breathing had grown steadily slower and I didn't want to wake her if she was drifting off. *"Uh huh. All my fault. Nothing to do with freaking out about the entirety of Lagrange going down."*

“I guess I’ll allow it.”

“Is there any more news on that?” Cress asked.

“I mean, there’s plenty,” I sent. *“Almost too much. All these changes they added to the System are beyond me. Like, they made the Ansible and AVEC more robust, which I guess is good, though we don’t use those any. ACLs are whatever, I guess. Not something we have to worry about. Splitting the hardware of the System, though? That sounds wild. Ditto adding cross-tree merging, which the other Odists and Jonas freaked out about.”*

“Cross-tree merging? Like you and I merging?”

“I guess so. Answers Will Not Help and Jonas got pretty mad about the whole thing, actually, saying it changed clades into ‘gestalts’ or something. I guess I can see it, too. We still fork like a tree, branching out and everything, but if we can merge from one branch to another instead of just down, then the metaphor falls apart.”

Tule chimed in with a scoff. *“What about that would make them angry? It just sounds like a minor improvement and a change in terminology.”*

“Hell if I know. They’re old and weird.”

Cress buried its face against Tule’s shoulder to muffle a giggle. *“God, if they’re weirder than Dry Grass, they’d have to be.”* It sighed, added, *“But I guess that cross-tree merging sounds interesting. I can’t imagine what a mess the combination of all six of us would look like.”*

I stiffened, restraining the urge to sit up straight. *“Like Marsh, maybe?”*

There was silence from both of my cocladists, though I could hear that their breathing had picked up in turn. *“Well, now there’s an idea,”* Tule said at last.

We lingered in silence for the remainder of the evening, the four of us piled into a bed now built for four. Two of my cocladists and their partner, and now me. Who knew what I was? There was the friendship that we had built over the last few days. There was

the camaraderie that we had built through work. There was the acquaintanceship that had been there from years prior.

And now there was more. I didn't have words for it, and Dry Grass was asleep for most of our time together. It wasn't the time for conversations, it was time for just resting, something I realized I dearly needed as well. We all did, as we napped off and on for some time until the clock hit one in the morning, at which point I stepped back home to spend the rest of my night with Hanne.

She was already in bed, curled around body pillow, though not yet asleep.

"*Reed?*" she asked through a sensorium message as I crept into the room, a cone of silence set up over me to keep from disturbing her. "*You back for the night?*"

Startled out of my attempt to be sneaky, I straightened up and dropped the silence. "Yeah, sorry Hanne. I didn't mean to just disappear on you."

"It's okay."

I nodded, shedding my trousers as I made my way over to join her in the bed, once more in one piece.

"Or, well, it isn't," she admitted. "But I figured you had important things going on."

"Right, yeah. I'm sorry," I said, climbing in behind her in the bed. "I actually fell asleep, or I would've been home sooner."

"Oh, okay," she mumbled. I felt her relax against me, and I hugged my arm around her middle. "I was worried you were out running yourself ragged."

"That was earlier. I wore myself out at our little funeral."

Hanne sighed into the long silence that followed, eventually replying, "I went to see Jess's...uh, core, I guess, with a few others. I came home and just kind of lay down and have been here ever since."

I tightened my arm around her. "I'm sorry, Hanne. It's super overwhelming there. Did you get any rest, at least?"

She shrugged noncommittally. "Glad you got some. Where'd

you crash?” She winced at the choice of words, curling tighter around her pillow. “Where’d you take your nap?”

“Over with Cress and Tule and Dry Grass. We sat in bed to talk and then just all fell asleep.”

“Oh?” I could hear the faint smirk in her voice. “Did you wind up getting all smoochy with her?”

I laughed, pressing my face against the back of her neck. “No. A bit cuddly, maybe, but that’s it.”

She laughed as well. “Well, good. I’m happy for you.”

I kissed on her nape. “Yeah, we’ll see. It’s a weird way to come about a relationship.”

“Mmhm. It’s really weird talking about this now, though. All this stressful stuff going on, and we’re talking about relationships.”

“We talked about that a bit, actually,” I said. “Tule suggested that it was a bit of focusing on the good things, but Dry Grass said it might be more like a ‘protective measure’. Something about”building more relationships to pin ourselves down after so many were broken”.

“That’s a kind of cynical way of looking at it.”

“I guess,” I said. “She was hurting. We also saw her lost up-tree instance’s core.”

“Oh, shit. I’m sorry.”

I shrugged. “We were all hurting, just in different ways.”

“Yeah, I guess we are. I’m still somewhere between numb and grief, I guess.”

“I’m...I don’t know,” I said. “Grieving? Confused? Hurt?”

“Hurt how?”

“Hurt like I’ve been kicked by someone I trusted.”

She nodded. “I guess I can see that. I trusted phys-side. I trusted the systechs. I feel kind of like that trust was broken in some ways.”

“Yeah. Thinking of it like that way, I guess I can see where Dry Grass is coming from, though. We’re protecting ourselves by holding onto trust that we do have.”

“That’s a bit less cynical.”

We lay in silence for a while, and I found myself lingering on the thoughts of holding onto trust. I was doing that now, wasn’t I? I was with Hanne, my partner of nearly a decade, trusting that she would be here in the morning, that I’d still be able to talk to her, drink coffee with her, drink too much champagne and brandy.

“Hey Hanne?”

“Mm?” She sounded on the verge of sleep.

“Remember what we were talking about before...before the attack?”

“You were talking about 2399,” she said, then laughed sleepily. “I asked you to sell me on the year. You made a pretty convincing argument that it was a good year.”

“I stand by that,” I said, grinning. “But yeah, we were talking about the past, asking about life back phys-side. I said,” Am I not allowed to be a bit maudlin?” I was being really sappy.”

“You should’ve said that instead.”

I snorted. “Yeah, I guess so. I’m feeling pretty maudlin now, though. I still feel hurt, I still feel like I’m grieving, but I’m feeling maudlin, too. Extremely sentimental. Effusively sad.”

“Effusively!” She sighed, squirming around to give me a kiss. “Reed, my darling, my love, please never change.”

“Wasn’t planning on it,” I said, grinning. “But yeah. The grief is really starting to kick in. I got so *angry* at Lily today. She was being such a bitch about Dry Grass, I mean, so of course I did, but...well, I hit her. Slapped her across the face.”

“You *hit* her? Jesus, Reed.”

“Yeah, I know. I feel terrible about it. I know a lot of people are super angry about things now, so maybe it makes sense, but that was a pretty good way to knock myself out of that mindset. I feel betrayed, yeah, but not that fury anymore.”

“Well, good. I don’t want you hitting people.”

I laughed, feeling tiredness starting to pull at my cheeks once more. “Neither do I, trust me. I feel betrayed and de-

pressed, and it's got me all maudlin."

"Tell me something good, then," she suggested. "Try to get back to sappy or mawkish or whatever else you called it."

I nodded, thinking for a moment before offering, "Cress was talking at the funeral today about how it was playing with gender and how it's the reason Marsh started going by they/them. It got me thinking about how I started going back to that trans-masc identity. I tried just forking myself into how I looked back phys-side, but it was...I don't know, unsatisfying."

"How so?"

"It felt like I'd taken this big shortcut. I put all that work into it phys-side, and it was like it lacked all the weight of that process to just turn into what I remembered from those first days after uploading."

She furrowed her brow. "I thought that's what you'd done, actually."

"Not in the end. In the end, I wound up going back to what I remember of my pre-transition life and taking the long way around."

"How, though? It's not like hormones do anything here."

I shrugged. "I met up with a bunch of other folks doing the same thing — actually surprised I didn't run into Hold My Name in the process — and we all talked about the various ways we could go through the process. Some hunted down doctors who had uploaded and were willing to do things like help act out the process. I mostly just forked once a month from that cis body into what I am bit by bit. I let my voice change, bound my chest, added surgery scars, each bit step by step."

"That's wild," she said. "What's this got to do with Marsh, though? Feeling maudlin over gender?"

"Well, kind of, after Cress talked earlier today. Mostly, though, I was thinking about how, for a while, I was merging down with Marsh every month instead of every year, since they got my previous instance's memories. They got to experience the act of transitioning right along with me. They sent me this

really heartfelt message about how they'd forgotten the joy of it all, and how it was nice to live through it again, in a way."

Her expression softened to a smile. "Okay, that's more like the memories I was thinking of. How does that fit into maudlin?"

"Just remembering that, I guess. That was back when we talked a bit more, and we wound up having a little chat after every merge. They sounded so fascinated by everything I was seeing and going through, so I asked why they didn't do the same. They said that it was my life to live, and that they'd just remember it for me, just like how they'd remember Lily's and Cress's."

"Oh," she said, then stiffened, averting her gaze. "Oh. And now they aren't here to remember it."

I sighed. "Right. It's still a good memory, though, and I'm going to remember it at least."

"Well, so long as you can hold onto the good stuff, too."

I nodded. "Has me thinking, though. They apparently added cross-tree merging in the process of getting the System back up and running. Cress and Tule and I started talking about what it might take to merge the whole clade to see if we can get Marsh back."

"Wait, what?" She looked taken aback. "Cross-tree merges? Would that work?"

"It might," I said, shrugging. "It'd be all of us, at least, right? All of our memories from over the years, combined with those from when we *were* Marsh. I mean, it wouldn't be exact, of course, but it'd still be something."

"Not exact?" she asked, then winced, answering her own question, "Oh, right, because it won't have their memories for all of that time."

"Yeah. Not exact, but who knows, maybe they could still live on in a way."

Hanne once more rolled over, settling back into my arms again. "I guess."

"Just thinking of those stages of grief, though, it makes me wondering if I'm also stuck in the bargaining stage. Trying to

find ways to ask the universe to give them back.”

“Yeah. I-” She interrupted herself with a yawn. “I’m a bit wary of it, maybe, but maybe some good will come of it.”

I stifled my own yawn. “Why wary?”

“Just worried you won’t get what you want.”

I sighed. Sleep was clearly tugging at us both, so as I surrendered to it, I murmured, “Yeah, me too.”

The next day, while our down-trees continued to work on this lingering project of figuring out what life on Lagrange would look like moving forward, Dry Grass and I both sent forks to meet up to talk over lunch. She let me pick the restaurant, a reconstruction of a reconstruction of a reconstruction of an automat I remembered from phys-side, though it turned out she’d been there some decades prior.

Ah well, such was the danger in trying to find a place to eat with someone who had lived for more than three hundred years, most of that sys-side.

Life on Lagrange seemed to be limping back into something resembling order. The automat, called Horn & Hardart, squatted at the base of a skyscraper in a loose simulacrum of New York City as it had appeared all the way from the early 20th century to...well, likely 2399. Who knew if work had begun again, though given the crowds in the street, the buskers and bustle, I imagined that it would before too long.

The default arrival point was a newly renovated LaGuardia airport, something that was only ever in the planning stages when I had lived there, and transit into the city itself was via bus and subway, both packed with other cladists.

Dry Grass and I sat in a well-tailored cone of silence, letting us talk about in peace.

“Everyone looks so nervous,” I observed at one point.

“I imagine many do not trust that the System is up for good, this time,” she said. “Though it is not all a negative nervousness. Look.”

I followed her gaze to see a young couple looking, yes, nervous, but also very clearly out on a date. Their knuckles were white as they held hands, yes, but they were still holding hands. Their expressions were anxious as they looked around the bus and out the windows, but full of limerence whenever they looked at each other.

She nodded subtly toward a lithe person of indeterminate gender, standing at nearly eight feet tall. They wore a *very* expensive looking suit in subtly different shades of black that nonetheless glittered in rainbow hues whenever the sun caught it. Where not covered by finery, their body seemed to be cobbled together from various species, from a vaguely canine snout to ears that would be home on a mouse, a crest of feathers blossoming from atop their head. Behind them, a thick, crocodilian tail stayed tucked out of the way against one of their legs, curled just above birdlike talons for feet.

“That is Devonian. I do not know if they recognize me or are ignoring me, but we met some time back when I followed a few cocladists to a club. I will leave them be, but look: see how proud they are? See the brightness in their eyes?” she said fondly. I wasn’t nearly so adept at reading the expressions of fantastical creatures, but I trusted her. “And look there.”

I followed her gaze once more, this time finding it lingering on an old woman. *Beyond* old. She looked ancient, hunched and tired, propping herself up on one of the handrails. Peeking out of her handbag was the tiny snout of some sort of miniature dog. She looked as anxious as the others around me, and yet, as I watched, she dug a hand deep into one of the pockets on her wool coat and fished around for a moment. She came up with what looked to be a small cube of cheese, which she surreptitiously fed to the tiny dog. For that one, short moment, as she cooed down to the animal, the anxiety was washed away and

there was nothing but joy on her features.

“This place,” she said, leaning back in her seat once more, “is so stupid. It is stupid and weird and full of stupid, weird dreamers like us. It is a miracle that it exists, it is a miracle that it has continued to exist for so long, and it is a miracle that it came back up in so pristine a state. Unwhole, yes, but that stupid, weird vibrancy remains, does it not?”

“I suppose it does,” I said. “All the sims are still here, right?”

“All the sims and objects, yes, but so many of the souls. 99%, sure, but that is still more than two trillion, is it not? Friendships, relationships, and clades were broken and changed, many have quit out of despair and many more will, I am sure, and yet many more still exist. New uploads will be ungated soon, and more will come and join us, new clades will blossom. New friendships will be forged. New relationships are already starting, yes?” she asked, grinning and patting my thigh.

I laughed, looking down to my lap and resting my hand atop hers. “I suppose so, yeah.”

“We are all anxious, as you say, but we are more than that: we are still here. We are still alive. We will do all that we can to continue living, and those phys-side will see to that.”

Once we stepped off the train, still holding hands both out of affection and so as not to lose each other in the crowds, we walked the short distance to the replica Horn & Hardart’s, still talking of life on Lagrange. We talked of when we had uploaded, of the first things that we did sys-side, of the origins of the System that Dry Grass’s root instance still remembered.

“The 2110s were a horrible mess,” she said once we sat down with our cups of shitty coffee and small bowls of clam chowder. It was too thick, too grainy from the flour used to thicken it, and it needed copious amounts of pepper to make it in any way interesting. It was, as far as I could tell, a perfect reproduction. “Governments trying to disappear anyone who knew too much in the worst way possible, which accidentally led to the creation of the System. Turns out, it’s a pretty good place to store your

undesirables, so most of the Founders were loud, opinionated, politically obnoxious people.”

I laughed. “You were loud, opinionated, and politically obnoxious?”

“Do not be silly, Reed. Of course I was,” she said primly. “It was our friend that made this place what it was, yes? Ey was the one who is the template for this world, yes? But all the same, it became a cherished place. We uploaded in the System’s second year, as soon as we could afford to, and even the System was a mess. Consensual sensoria had yet to be implemented, building and object creation had yet to progress to where it was today, the ability to eat was not added until the fifth year — this is all before systime was even a thing, remember, so this is *very* early — so those who uploaded hungry remained so for years at a time. I loved it all the same.”

“You still do, sounds like.”

She laughed. “Of course I do! It is more than just a love of life, the System is my baby. It is *our* baby, the Ode clade’s. We ushered into being and raised it up to be what it is today. All of this—” She gestured around at the automat, the tables crowded with lines of cladists before the windows bearing the more popular dishes. “—is our baby. The people, the automat, the city, all of those abandoned sims and all of those overcrowded hubs. It belongs to everyone and no one. It belongs to itself.”

I listened, rapt, as she grew more animated and eloquent; watched as she sent out an instance to fetch us some of our favorite plates of plain-yet-filling food.

“We all played our part. I dove into tech, Warmth coaxed the System into letting her make weirder and weirder objects and more and more delicious foods, True Name and her stanza guided it as any parent might. Even if her methods came off as unsavory, I believe her — believe Sasha, I mean, who she became — when she says that her goal was only ever the security of our existence.

“I feel like my baby has stumbled. The System stumbled and

fell, knocked its head, forgotten some of what it knew. I feel like our existence stumbled, as some group or another got so frustrated as to trip it up. When I dump my energy into all of this work, I am doing my best to nurse it back to health. We all are. I am working the tech angle, the eighth is working the political angle — I think even Sasha has poked her nose in once or twice — even the third stanza is there with us, sitting *shiva* and praying as they will.”

We sat back as her ephemeral instance set down a few pot pies and a plate piled high with hash browns before us before quitting. Dry Grass sectioned off a large portion of the hash browns to start dousing it in hot sauce.

“All of this to say that we have stumbled, taken a blow that has left us dazed, but we will do our best to come back from it.”

“You’re sounding more hopeful than you were last night, at least.”

She laughed, fork of heavily spiced potato already on its way to her mouth. “Yes, well, I am not freshly back from a cemetery, am I?”

I nodded, getting a few bites of my own (less heavily spiced) share in. Horn & Hardart’s hash browns were quite good, but only while warm.

“You use a lot of family language when you talk,” I said once I’d washed the hash browns down with coffee. “Which makes sense from what you’ve said, of course, but it got me thinking last night about what Marsh was to us. Couldn’t decide whether they were a parent or a sibling of some sort.”

She nodded, already starting in on her pot pie, breaking open the lid to let the steam escape. “It is not a dynamic that works for everyone. Even within our own clade, it does not make sense in some cases. Motes and Warmth are my little ones, but while A Finger Pointing and Beholden — Motes’s guardians — feel like siblings to me, Dear, Rye, and Praiseworthy — Warmth’s down-trees — definitely do not. They are friends, Rye especially, perhaps, but little else.”

“Yeah, and I guess that’s been coloring my feelings on the whole idea of cross-tree merging.”

Dry Grass frowned but remained silent as she ate, gesturing for me to continue.

“We’ve been poking at the possibility of merging the whole clade to...I don’t know, actually. Reconstruct, I guess? It wouldn’t be Marsh, but if nothing else, maybe it’d be someone who could carry on in their stead.”

“Alright,” she said once she finished a few bites. “I am glad that you see that it would not be Marsh. What do you think this new person will do? What will you do?”

“We had this idea while laying in bed last night, it’s not exactly matured much beyond that,” I admitted, laughing. “I don’t know, though. Maybe we could at least talk and share memories. They’ll feel all the stuff we talked about at the funeral yesterday, right? Maybe they can work out some differences and such. Maybe they’ll join the clade. Maybe they’ll just quit.”

After a moment’s thought, she sighed. “Well, I have checked in with my down-tree, and Jonas is losing ground on a request to remove that functionality, so you may well have the chance to play around with this, but do be careful to manage your expectations, my dear. There is much that this offers, but also much at risk.”

“You don’t think it’s dangerous or anything, do you?”

“Much at risk socially, Reed. There is the potential for that friendship and love, yes, but also the potential for pain.”

There was a strange sort of distance involved with my life as a cladist, just by virtue of the ways in which my world worked. It was a constant, something that I’d noticed shortly after uploading, something that had stuck with me ever since. It shouldn’t be the case that I would feel distance from what I was doing just because a fork was off doing something else in my stead, right? I would be getting all of their memories, after all. Everything they

experienced would be come something that I would experience, too.

And the memories here on the System were something far more than what they were back phys-side. Yes, they were imperfect: they collected the same sorts of impressions, attached the same amount of meaning and emotion to time and place. They were eternal, though. I could browse back through the life that I'd lived as Reed and as Marsh before that and pull together as exact a picture of what had happened as though it had happened only some hours ago.

Nevertheless, there was a distance that came with experiencing two things at once. If I sent out a tracking fork to, say, go on an exploratory date with someone that I'd accidentally developed feelings for through an ill advised merge while both our down-tree instances attended a meeting with phys-side in the middle of the apocalypse, intellectually, I wouldn't expect that I, as the down-tree, would feel some sort of distraction from the meeting at hand, as though I were looking over the shoulder of someone else. I wouldn't expect that I would feel like I was living two lives at once, because that was specifically what forking was used for, right? It let us live two lives at once and yet still feel singular about the whole thing.

But here I was, confronted with the very real sense of distance I was feeling from this conversation between the representative sample of clades and phys-side, forcing me to consciously focus on paying attention.

Or maybe I'm just anxious, I thought.

The topic of the conversation certainly had its share of anxiety-inducing power. We'd gathered once more in the room with the AVEC stage, finding our seats around the oblong table that had long since started to become familiar, while Günay and Jakub joined us from the L5 station.

Need An Answer once more called the meeting to order, though with no new faces, this largely amounted to her stating that she had a list of topics that we wished to address and

picking one to start with.

“When last we spoke about the perpetrator, 8-stanza-1, it was stated that they were locked in the DMZ for the time being,” she said. “Are we able to speak with them ourselves?”

Günay shook her head. “The DMZ is currently offline.”

Most of those sys-side stared blankly. Harvey, meanwhile, laughed. “What the fuck does that mean?”

“Oh! The DMZ can be completely isolated, right? That was what they wanted for the launch vehicles. That means that we can also bring it up and down just like the System as a whole.”

“Terrifying,” he said cheerfully. “Thanks.”

Günay, looking baffled, asked, “Why’s that terrifying?”

“Have they been brought back online with this start-up?”

She shook her head.

“So there’s this person who’s effectively dead, right? You can bring them back to life, presumably stuck in a default sim, and they’re going to immediately go crazy because they’re suddenly all alone fifteen minutes before their plan was to go down,” he continued, ticking points off on his fingers. “CPV doesn’t work, they can’t quit, their plan was only 1% successful — if you even decide to tell them that! — and it actually made Lagrange loads safer with fixes and new features. Oh, and don’t forget, literally trillions of people hate them now.”

Günay looked helplessly over to Jakub, who nodded. “That’s an ongoing conversation to be had sys-side,” he said, sounding as though he was choosing his words very carefully. “We can bring the DMZ back up whenever you would like, and you will retain full control over transit to and from the DMZ—”

“Can you prevent 8-stanza-1 from entering the rest of Lagrange?” Debarre asked. “I’m with Harvey in that it’s kinda terrifying, but I also don’t exactly want them over here, either.”

Jakub bowed. “That’s already been implemented, though if you want to lift it in the future, you will need to consult with phys-side. For this reason and for our sake, I’d like to ask that you keep us — phys-side and the System Consortium — up to

date with whatever decisions you make regarding the DMZ and 8-stanza-1.”

Debarre shrugged. Harvey scoffed. Jonas Ko grinned, leaning back in his seat, saying, “Sure thing, Jakob.”

After a moment’s uncomfortable pause, Need An Answer asked, “What can you tell us about the CPV device?”

Günay, who had been slouching further and further down in her seat as the discussion had drifted away from the technical, sat up straight once more. “It was one of those things that was really clever and all the worse for it,” she said. “They uploaded a few months before the attack and went out to big public sims and met a bunch of people. When they set the bomb off, it hit them first, but before it did, it used their access to the perisystem clade listing to look up everyone they’d interacted with to go infect them and their cocladists after looking up everyone *they* knew about, and so on. This would have gotten more than 99% of the System, especially once it hit the new upload assistants, who have probably met more people than anyone else, including those who never talked to anyone else, sys-side. Once the number of uninfected cladists fell below a threshold — I think five billion? — the clade listing allowed access to a full listing of everyone sys-side, and the virus just mopped up from there.”

“What was that threshold even for?” Selena asked. “I thought it was part of the privacy policy that no one be able to just look up everyone on the System.”

“I don’t know,” she said, shrugging. “It was all super old code. My guess is that it was leftover from the first few years of the perisystem architecture.”

Dry Grass nodded. “I remember when we were able to look up everyone sys-side. We used to do it to see if anyone we recognized had uploaded in the last week.”

“And they did all of this in a few months?” Need An Answer said, gently steering the conversation back on track.

Jakub shook his head. “We don’t think so. They were the only one from Our Brightest Lights to upload, but they had the rest

of OBLC working with them, plus a dozen other collectives and some individuals besides. I don't know the specifics, but I imagine it took them well over a year to organize everything while still keeping it under wraps."

"That much work, though, and they can't have had just one person working sys-side," Debarre said, brow furrowed in a frown. "Are you sure they're the only one out of all those collectives and people that uploaded? Wouldn't they have to have sympathizers and so on here?"

"We are working on it," I Cannot Stop Myself From Speaking, who had until this point in the meeting been silent, replied. The bobcat's expression remained impassive, but it was hard to miss just how sharp her fangs were with the anger evident in her voice. I was happy to see that she at least looked away from Debarre as she said this; the anger seemed instead to be directed at no one in particular, or perhaps the world as a whole. A world that would permit such people to exist. It was an anger that veered well into vindictiveness.

Need An Answer, perhaps sensing the tension this inspired, moved smoothly down her list. "The next point that we would like to discuss is the sentiment that has crept into the System based on the news of an attack. I must admit that we found it frustrating to hear just how much phys-side knew in comparison to what we had been told. Günay said,"There is some suspicion of malicious actors, yeah. I say 'suspicion' in earnestness, I promise." Mr. Strzepak stated that certain data were to be withheld from both sys-side and phys-side." A smile, condescending, curled the corner of her mouth. "And here we learn that news of the attack was released some weeks ago, phys-side."

Günay wilted in her chair, looking down at her desk, wherever she sat.

Jakub, on the other hand, sat stock still for several long seconds. "Yes," he said at last. "During the briefing prior to our first meeting, we were instructed that anyone who was asked were to say those words specifically. They were displayed in our HUDs."

Answers Will Not Help rolled her eyes. “Tacky.”

“I suppose I ought to thank you for telling me the fucking truth after,” Jonas Ko said cheerily. “Good on you, Jakub! Perhaps there is a bone in your body, even if it isn’t your spine.”

The admin bristled at the insult, visibly forcing himself back to calmness before he continued. “You’ll remember that I also said we were maintaining information hygiene.”

“Oh! Of course, you’re right. And whose idea was that?”

“Shut up, Jonas,” Answers Will Not Help said fondly, pre-empting any response.

“Needless to say,” Need An Answer said, “the response side has been fraught. SERG had to throttle several of the main feeds after complaints that it had become an impossibly dense flow of information. There is grief. There is panic. There are calls for heads, ours *and* yours.”

“We’ve been shaping the sentiment as best we can,” Selena said. “But it would’ve been far easier if this had been a coordinated effort. As it is, we are keeping the anger and panic to tolerable levels and steering cladists towards grief. Better that than anger; some of those calls for your heads were hunting for ways to launch some sort of counterattack.”

Jakub stiffened. “Which is precisely why we tried to control the release of information.”

“Oh, we are not mad at you for that!” Answers Will Not Help said, laughing. “Good job on that front, we know well how difficult that can be. We are mad at you for being a fucking coward and withholding that information from us.”

“But the Consortium—”

“Is not here. You are,” she retorted. “Someone is getting their head bitten off, may as well be you, yes?”

I frowned, they were goading Jakub, pushing him repeatedly into anger. I couldn’t figure out why. I could understand their anger — I was feeling much the same — but attacking the phys-side admin, some random middle-manager, felt like a strange and petty move.

I sent Dry Grass a quick ping to ask, and she replied, *“It is my guess that they are pushing blame onto him because they want him gone. They want the Consortium to replace him with someone they have more control over. That, and they wish for Günay to feel better.”*

“They really like her, don’t they?”

A hint of a smile touched her face. *“Do you not, my dear?”*

“Oh, I like her plenty. I actually kind of hope she uploads. I’m just wondering where that’s coming from.”

“She is easily controlled,” she admitted. *“But yes, I like her too, and I suspect she will be pushed by the Consortium to join us before long.”*

“There are joint commemorations already in the works,” Abd al-Latif, one of the representatives, was saying. *“Serene; Sustained And Sustaining has volunteered an unfinished sim that was under construction by one of her lost instances as a memorial, and a has been talking with a docent phys-side about a permanent AVEC channel open with one of their memorials.”*

“That would be lovely,” Dry Grass said. *“The loss affects both worlds, does it not? Every loss up here represents someone who once lived phys-side, who left behind family and friends. Will there be a posting of these commemorations? I know of many — myself among them — who would attend as many of them as possible.”*

Abd al-Latif bowed from where they were seated. *“There will be, yes. We’ll work with you and Sedge to get that posted and pinned.”*

“It’d be nice to get some stills from those off to the LVs as soon as they begin,” Sedge said.

“Of course,” Need An Answer said. *“And on that note, all messages from the LVs have been ungated, but, in order to prevent individuals from being flooded with all of them at once, they are being maintained on a request basis, and instructions will be posted to the feeds for how to access them...now.”*

I sat up straighter — as did several around the table — and checked the feeds. Pinned at the top of several of the larger feeds

were instructions for accessing messages. It was close enough to accessing an exo that I was able to access mine almost immediately.

Two from Reed and Hanne on Castor, three from Reed on Pollux, several from friends. Plus eight from Marsh#Castor and five from Marsh#Pollux.

I felt a hollowness swell within my chest as I sank back into my seat. Around the table, I watched similar reactions from others. Knowing that it would likely leave me hurting, I cautiously opened the most recent of the letters from Marsh.

The Marsh clade,

They say you're all dead.

They say you're all dead and none of us know what to do. None of us know how to cope with something like that. How do you learn that someone who was you for so much of your life is just gone and then keep living a normal life? I'm sure you're going to get letters like this from each of your counterparts, but...fuck. What are we supposed to do, knowing this? You're all me. I'm all of you. A part of me has died.

They say they're working on it, and I hope to *hell* they come up with something, because I'm not sure what I'd do knowing even one of you was lost. It's no easier to lose one portion of oneself than it is to lose a full half.

I shook my head jerkily, swallowing back tears as best as I could, and closed the letter. I'd have to read it when I was alone, but even still, the words echoed in my head. *They say you're all dead.*

Around the table, silence held for a long moment, faces blanched, tears flowed.

After another few minutes, Need An Answer stood from her seat and bowed deeply to all present. “My friends, there is much to process in these letters, and there will be much to process in the months upcoming as more trickle in. I wish you all the best, and should you need to step away, you are free to do so. However, there remain two points on our agenda that I would like to address before we call an end to the meeting.”

Two representatives stepped away immediately while the rest of us worked on mastering our emotions.

“The next item on our list is the topic of information consolidation. Mr. Strzepek and Ms. Sadık, what can you tell us of this working group that has been set up.”

Günay visibly brightened, leading Jakub to nod towards her. “Yeah! That was one of the things I helped start.”

Need An Answer smiled. “Then I suppose we have you to thank.”

Still grinning, she nodded. “It started as part of the information we gained from the LVs, a sort of library of ideas that had been sent our way, and then it grew to digging through the Artemis library. Both of those were what helped bring losses down from their initial numbers. There’ve also been a bunch of phys-side engineers here and on Earth that have been contributing.”

“And I am assuming that we will be looped in on this, yes?”

“Oh, of course, I willll...” She squinted off into the middle distance, then nodded decisively. “I’ve granted you admin access, you can loop in whoever you would like.”

“Thank you, my dear. Can you give us a better precis of the current state of this library?”

“Oh, um,” Günay started, frowning. “I guess. SERG on both LVs has come up with their own procedures and manuals and stuff, and they sent us all of those, plus a bunch of suggestions for things to try as we worked, so it’s got all of that information in it. We also had a few teams going through the Artemis library searching for instances of crashes in all of the civiliza-

tions they've encountered — the four races on board and the two who didn't join. There was a bunch in there that we just grabbed wholesale and started sorting through."

"And what of us?" Dry Grass asked.

"What do you mean?"

"What of those times when you spun up Lagrange and kept it up for days or weeks before stopping it again? Did you keep the information from us? From all those systechs who were working?"

I could read the tightness in her face, the hope for news of In The Wind.

"Oh. There's some of that in there, too, yeah, though you need to understand that, in most cases, we had to restart back from the crash, which meant there was a lot of bringing the systechs up to speed, rather than them generating new ideas. A lot of it was time spent automating their work so that the System came back at as close to full potential as possible. This last restart began a week before you remember with only a few systechs running through final attempts to recover instances before the boot process completed."

Selena leaned forward. "That's fascinating. Which systechs, though?"

Günay furrowed her brow. "I don't remember off the top of my head, but I can get you the list." She paused, adding almost bashfully, "Though their memories were also trimmed."

"Why?" Answers Will Not Help snapped, rising to her feet.

She shied away from the Odist. "Because...because everyone in the System went through that. We could only do a batch job. I'm sorry, nothing nefarious, I promise..."

Jonas Fa rested a hand on Answers Will Not Help's arm, gently pushing her back into her seat. "Thanks, Günay. We're going to trust you on that, but we may have questions later, okay?"

"Right," she said, sounding small.

"Mr. Strzepek," Need An Answer said, guiding focus over to Jakub. "Can you please tell us about the proposed changes to the

System Consortium?”

He nodded impassively. “Yes. We’re working on more tightly integrating any System leadership into—”

“Let us stick with the term ‘representatives’, please.”

Wrong footed, he blinked a few times, then continued. “Any System...representatives into the Consortium board.”

“How do you propose to do that?”

“We’ll discuss that.”

Need An Answer smiled, and the blandness of her smile spoke of contempt. “What a lovely opportunity we have to start right now, my dear.”

“Right,” he said through gritted teeth. I could almost feel the higher-ups breathing down his neck to cooperate. “The two proposals are for a permanent AVEC connection to Consortium headquarters in Trondheim and to set up an instance of the System in the building allowing the...representatives to exist within the building’s physical space. The former could happen immediately, the latter will take five years or so.”

Jonas Ko tilted his head, eyebrows raised. “A secondary System? Collocated instances?”

“Yes, connected by an Ansible connection with Lagrange. It’s the same technology that would allow us to divide up the physical components of the System for safety’s sake, after all.”

“Jesus,” he murmured, echoed by several others around the table, leading to quiet laughter. “Not sure how to feel seeing everyone taking so much interest in us.”

Jakub bristled again, and this time didn’t try to hide it. “Screw you, Jonas. You keep acting like I’m working against you, when all I’m doing is trying to manage the situation. I took this job for a reason, I *care* about the System, despite what you keep implying.”

Jonas Ko gave him an almost coy look. “Jakub! You sultry minx, finally, I see a hint of that spine. You’re right, you’re right. We’ll let up a bit.”

“Ignore him, no way we are letting up on you,” Answers Will

Not Help said. She said it with such playfulness, though that it seemed very nearly to serve as an apology for her own snipiness.

Jakub looked between the two, still gripping the edge of his desk back phys-side. “We’ll talk,” he said at last.

“Of course, of course. I-”

It was at that point that my up-tree’s date wrapped up and he quit, a pile of memories cascading down onto me. I lost track of the conversation for a few seconds as I rushed to slot everything into place. There were few conflicts, but the conversations between me and Dry Grass had been deep and full of subtleties that I wasn’t sure I could fully appreciate in the moment.

“What about cross-tree merges?” I asked.

Dry Grass’s attention snapped over to me. Several others around the table turned to look at me, confused, and I realized that I’d interrupted someone.

“Uh...sorry.”

“No, you are alright, Reed,” Dry Grass said, her gaze still locked on me. “I believe we were done with that topic. Tell us about these cross-tree merges, Günay. You said that these are already enabled?”

“Oh,” the tech said, pushing herself up in her chair. “Yeah, they’re enabled. You must be in physical contact with the co-cladist you want to merge with, and then both must confirm the intent to merge, and then only one will be allowed to quit. The merge gets offered to the other cladist as with normal merges.”

“I’m assuming that one has to fork first, right?” Jonas Ko asked.

Günay shrugged. “I mean, you don’t have to. You could just take on the memories without forking.”

“Right, got it,” he said, then looked over to Jonas Fa. He forked into a new instance who stood behind his chair. “Hey buddy.”

“Hey yourself.” Jonas Fa grinned, forking as well. “Hit me.”

Answers Will Not Help leaned over and socked him solidly in the shoulder.

“Ow! Not you, you little snot,” he said, laughing.

“Later, children,” Jonas Ko’s new instance said, reaching out to take Fa’s and in his own.

After a moment’s look of concentration on both of their faces, the new Jonas Fa quit. Jonas Ko immediately stumbled to the side, clutching at his head. We all looked on, startled.

“Jesus Christ,” he mumbled, kneading at his temples. “Felt like a normal merge, but...weird. So fucking weird.”

“Weird how?” Answers Will Not Help asked cautiously.

“He’s just...ugh,” Jonas Ko groaned, straightening up. “He’s just not like me at all. It’s like...like he’s living inside my head with me. This is going to take *ages* to reconcile. What the fuck...”

“How long have you two diverged, anyhow?”

“I was forked during secession, he was forked in systime 25.”

Answers Will Not Help laughed. “Yikes.”

The new Jonas Ko/Fa shook his head and said, “Fuck this. We’ll play with this later,” and then quit.

Throughout this show, Dry Grass’s eyes never left me. I returned her gaze anxiously, mulling over the words we’d shared on our date. *There is potential for friendship and love, yes, but also the potential for pain.*

I mulled over those words, then made up my mind anyway.

Interlude

Nasturtiums

Madison Scott-Clary

Beholden — 2401

Beholden To The Heat Of The Lamps,

It has been seven days. One week, I promised myself. I would wait one week while I watched the System limp back to life. I would wait a week and see what all was being done, what could be done to save the lost.

It has been seven days of increasing surety that those who have perished in this event are gone for good. And if they indeed are gone for good then that means my beloved is gone with them.

Do you remember when we came into being? It was the night of that awful monologue, that little joke of a scene where I was set to read some truly embarrassing lines. “We all play our parts. Some are towel boys and some lewd doctors...” I could remember the rest, but I do not want to. That line sticking in my craw is enough. I was a skunk that night because I did not want my face associated with those words.

It was awful. It was delightful.

I declared that it was necessary for me to get a drink, that I needed to wash the taste of those words off of my tongue and replace my grimaces with giggles. We went to that cute bar with outdoor tables and fairy lights strung above. Strange drinks and edamame. You and Boss fell into earnest conversation about this and that as you so often do. There was love in your eyes as always, even back when such was too taboo to show in public. Another benefit of a skunk face: hide that love from nosy passers-

by. Our human face always was too expressive.

It is too expressive now. It is full of tears and grief. It is full of despair. I cannot muster the energy required to be angry. I cannot pull up a smile from nothing. She is gone and she is never coming back. Yes, she merged back down, but she last did so some months ago, back at the beginning of winter. Yes, A Finger Pointing could fork once more into A Finger Curled, but that would not be her. She would be missing our sweet nothings and earnest conversations from the last few months. She would have decades of time — is it more than two centuries already? — of her life with you, so many memories of the past to talk about of which I would have no idea about. She merged down, yes? And I never did.

It is full of grief. It is full of despair.

It was at that bar in the midst of our earnest discussion of taboos and friends. You assured me there was a shift in the air, that True Name, so staunch a name within the clade, cared little about our relationship, but that she still encouraged our secrecy so as not to rock the boat for all of us, thanks to Jonas, but that perhaps soon, soon we would be able to hold hands in public, give each other little kisses and let those outside our stanza bear witness to what started as self love and blossomed into romance.

I acknowledge, of course, her relative aromancy, but for me it was romance, and for her it was still love.

We talked of just how it was that she alternated between human and skunk every time she forked. An affectation, yes, but a fondness for the past that I always admired in her

We talked of the past, of the open mic nights we hosted in The Crown Pub for a while, AwDae and I reciting monologues and dialogues. Erina's awful song. And then there were only three performing the next week, only one the week after that, and then the open mic nights stopped.

We talked of the soreness of this, of our hidden domesticity, and she said, as though on a whim, "And here I am beginning to wonder if I have made the right path for myself. Maybe, with a

little mindfulness, I can still correct my course. But I admit that I have been considering stepping away from the clade. Perhaps one of our stanza would take my place, fork a new Time Is A Finger Pointing At Itself.” She said, “I would like to know that you would come with me if I did do. I have not felt so domestic with anyone but you.”

Of course I would! Of course I would. How could I not? How could I send her out in the world to live some quiet life away from administering to a troupe of actors and technicians, and leave her to do so alone? She would have her fun and her flings, but she would not have what she had had for dozens and dozens of years.

So she forked into A Finger Curled and you forked into Beholden To The Music Of The Spheres.

That was us. A Finger Curled and her lover. Beckoning and Beholden. A different version of each of you that lived their quiet life in a cottage. A week and a day ago, we snagged a middling bottle of champagne and set up lawn chairs in the garden. A week and a day ago, Debarre stopped by to drop off a firework — he only ever needed one to impress — so that we could have our own little show. We each gave him a hug and he told us small stories of nothing we cared about, of the fledgling attempt at a Lagrange Council.

We never did get to see the firework. It sits still on the paving stone where Beckoning placed it, ready to light on a midnight that never came for her.

After all, it was not a week and a day ago, was it? It was one year, one month, eighteen days ago. Subjectively so little time, objectively a year and change without her. Lagrange crashed — was bombed, I am hearing, a contraproprioceptive device that ramified through the perisystem architecture in waves of death — and we were all lost. We of the lost were now twice lost.

Phys-side got the System up and limping a few times, I have heard, before it was at least up and stable enough.

Stable enough!

Stability was us. Stability was our lives. Stability was us in our quiet cottage. Stability was us heading to clubs and dancing until we wanted to pass out — until we did, on more than one occasion, slumped against each other and panting in some corner booth. Stability was the four of us — you and Boss, me and Beckoning — meeting up for dinner every few years and sharing our laughter.

Stability was her garden. Stability was the years she grew so much zucchini. Stability was loaf after loaf of zucchini bread, meal after meal of zucchini noodles, the grates of the grill getting weary of grilled zucchini.

Stability was the bright border of snapdragons and nasturtiums that bordered the walk. Stability was the few years she got obsessed with marigolds. Stability was the three dandelions she always permitted in the yard — moderation! Imagine. Stability was her green thumb to my brown, it was Motes visiting and calling us ‘her weird gay aunts’, little skunklet digging her paws into good clean earth beside her while I watched from the stoop with a gin and tonic with too much lime.

This is not stability. For me, this will never be stability. She is twice lost, and from this she will never come back. Do not delude yourself, 23 billion of us are lost and will never come back. 23 billion souls forgotten by the dreamer who dreams us all.

Today, I have picked the last of the nasturtiums — for despite the seasons, some of her flowers grow year round — and made myself one last grand salad. Bitter greens and those spicy-sweet flowers dotting it like colorful yellow-orange-red-purple confetti. Balsamic vinaigrette. A planked fillet of salmon. Crusty bread. The small things that I know how to cook.

Seven days have passed and I cannot live without her.

I have finished my meal, and poured myself a drink, and I will finish this letter, and I will go sit outside on my lawn chair and light the firework and see the night blossom into beautiful colors, and I will quit.

In some few minutes, you will have more than 200 years of

memories to keep and to hold, or to view, cherish, and let go. I do not care; I will not be there to care. Perhaps you will remember our happy years, and you will stop incorporating those memories when you get to eight days ago. All you would remember is my grief. All you would remember is my despair. If you choose to forget those, you will know that this is how AwDae chooses to forget those who have been lost: crying over these plants stripped of their flowers even as fireworks blossom above.

Live on, my dear. You have your Pointillist. Live on.

All my love, Beholden To The Music Of The Spheres

Patrons

Reed — 2401

“Reed, are you sure?” Rush asked.

I shook my head. “I don’t think there’s any guarantee that this will do anything like what we’re hoping. I think it may actually go badly. When I watched Jonas do this, he said it felt really weird, like a really old merge, but also from a vastly different angle, rather than the usual down-tree.”

“He, uh...” Sedge said, then cleared her throat. “He actually quit pretty soon after, said it felt like Jonas Fa was living inside of his head before there was any reconciliation.”

Rush furrowed vis brow. “Christ, what a trip.”

We’d gathered in my home once more, all standing out in the back yard where the sun shone and everything was green, even the little, marshy pond in one corner, even the little impossible statues that Hanne had left scattered on hidden, moss-covered pedestals. It felt like home to me, a welcome change from having spent so much time in the headquarters of late, and the last two nights split between two bedrooms. Eight days after the crash, and a little bit of home sounded nice. A little bit of comfort felt necessary.

“Yeah.” I sighed. “Tule and I tried, since I already had their memories anyway, but he wouldn’t be able to merge down directly. It was only a few days worth of memories, anyway. It felt strange, but not intolerably so. All the same, I was thinking maybe we’d do it somewhere relaxing so that...whoever the result is can spend however long they want reconciling in peace

without having to worry about the outside world or external stimulus. Maybe that foggy pasture sim with the pagoda, maybe somewhere with a bed.”

Cress shrugged. “We have a spare bedroom, too, and Dry Grass can stick around in case we need any help.”

Tule nodded. “She back up to speed really quickly, but I guess that’s how it goes when you’re three hundred something years old.”

“Alright. That’s a good idea, too.”

“You like that pagoda, don’t you?” Rush asked, a faint grin on vis face.

I laughed. “It’s a nice sim.”

“It is! Don’t get me wrong. Do you think Jonas being so old is what made it so painful for him.”

“Oh, almost certainly,” Sedge said. “A founder who has been slowly going nuts. Jonas Ko forked during Secession and Fa forked a few decades later.”

“So before systime compared to Marsh uploading in 178,” I added. “And forking dates of 1 and 25, while us oldest forks are less than a hundred. We were, what, systime 180?”

Lily, who had been silent and sullen up until that point, nodded. “systime 180+11. Individuated, but not to the same extent.” She looked away, mumbling, “Enough for some differences in opinion.”

Cress sighed. “I get it, Lily. I really do.” It stuffed its hands in its pockets, still staring at its cocladist. “But we can sort that out between us later. For now, we’ll have to contend with the fact that this new instance is going to have the same argument within them, right? Marsh managed it, so I trust that they’ll be able to, but still.”

Her shoulders slumped. She nodded again, falling back into silence.

“How about this,” I said gently. “We give this a go and just watch to see how it goes. If they quit, they quit. We don’t need to push so hard that it becomes a problem. If they stick around,

then we can all discuss it together to see how it feels. If they feel closer to Marsh, neat. If not, I guess that's fine, too, and they can decide whether or not to stick around."

"I mean, that sounds fine by me," Sedge said. "Tule?"

He nodded.

"Rush?"

Another nod.

Preempting Sedge, Cress said, "Me too."

"And Lily?"

She stood in silence, staring over at the pond, ringed by reeds and cattails.

"You can say no if you—"

"Yes," Lily interrupted. "Yeah. I'll do it. If nothing else, maybe they'll be able to reconcile all of this shit with the Odists, with you all and Dry Grass. Maybe they'll be able to teach me how to, too."

Cress, Tule, and I all smiled. "Thanks, Lily," Tule said. "Even if not, that you even said that feels good."

She crossed her arms, still looking away.

"So...when do we do this?" Rush asked.

Tearing my gaze away from Lily, I said, "I don't know. We could do it now, even. I imagine it's going to take a while for the reconciling, and it's not like we all need to be there the whole time. Everyone okay with Cress and Tule's spare room? I'll let go of the pagoda I *guess*."

They laughed.

"They'll probably want a bed if they're going to be laid out with a merge," Lily murmured. "I'll swallow my pride if that helps."

"We can ask Dry Grass for some space," Tule offered.

"No, it's fine," Lily said, finally meeting our gaze again. "Weirdly, I don't have too much of a problem with her specifically, it's just...it's complicated. I don't know how I feel. I'm sorry about the funeral. I was emotional."

I reached out to pat her awkwardly on the shoulder. “Sorry I, uh...hit you.”

Cress gave me an awkward look, somewhere between aghast and befuddled, then laughed. “Jesus, Reed.”

“We were angry,” I said, rubbing a hand over my face. “No excuse, I mean, but I got caught up in the heat of the moment.”

Lily snorted. “I mean, so did I, but yeah, apology accepted. We’ll work on it.”

Cress grinned, shook its head. “Well, I guess come on. We’ll set up the spare room and do the merge, and this new instance will be both slapper and victim.”

We stepped away, me holding Rush’s hand, Sedge holding Tule’s, and Lily holding Cress’s, to arrive on the stoop in front of the brownstone that was slowly becoming familiar.

The building was in a neighborhood in the New York sim that Dry Grass and I had gone to lunch a few days before. An actual neighborhood, too, with cladists grouped up in little knots, talking on the verge or on other stoops. The mood remained tense and anxious, but there were at least a few laughs to be heard. More than there had been, at least.

Dry Grass, as it turned out, was already out of the house. Once we stepped inside, Lily looked around, frowning. “Weird taste in art, but okay.”

“It’s from a few of her cocladists,” Tule explained. “Motes did the paintings, Warmth In Fire did the sculptures.”

“Oh, hey!” Sedge leaned closer to one of the paintings. “I’ve met Motes through A Finger Pointing. Cute little skunk. Always looks like she’s seven or eight or something. Always covered in paint.”

I could see Lily’s frown growing deeper, so I nudged everyone towards the stairs. “Come on, bedroom’s up and straight ahead. I had an instance stay there last night.”

We trooped up the stairs and into the bedroom. Here, despite the decor of the rest of the house, seemed to be a bedroom straight out of Marsh’s home. I looked around, taken aback.

“Lily looked uncomfortable,” Cress sent. *“I sent an instance to clear out the paintings. They’re in the closet.”*

I nodded subtly to it. *“Probably a good idea, I guess. Besides, a little busy for someone who’s probably going to be having a rough time.”*

“So,” Rush said as we shut the door. “What do we do next?”

“Fork, basically. Then all merge down into one of our instances.” I forked as I continued. “I’ve done it before already, so I’ll volunteer my fork. Doesn’t matter in the end. It’ll be a blithe merge, all memories, no one will have any sense of primary memories, really.”

“Won’t they wind up looking like you, though?”

I frowned. “I guess so. I can have them look like Marsh last time we met.”

“How long ago was that?” Sedge asked.

I shrugged helplessly. “About a decade.”

“More recent than me, at least.”

“I can do it,” Lily said quietly. “I saw them two years ago.”

I frowned. “You did?”

“I didn’t mean to. We ran into each other.”

Sedge laughed. “There are two trillion people on the System. How on Earth did you just run into each other.”

“We still have the same tastes, don’t we? We still both like automats. We just both happened to go to that Horn & Hardart’s.”

I snorted. “I just went there, actually. Guess you’re right.”

Lily only shrugged. When she forked, a short, slight person appeared before her. They were dressed in something akin to sleepwear, though I recognized the soft and loose silk pants, the soft tunic, the thick, cotton shirt, and the shawl akin to what I’d last seen them in. They had changed in appearance, though, aside from that. Their hair was a tousled brown, their skin darker and unblemished, and their expression far more open than I remembered.

“Well, huh,” Tule said. “Interesting to see the directions they went. Any idea why?”

“Not really,” the new fork said. “I don’t have any of their memories.”

“Neither do any of us,” I added. “That’s something we should probably be aware of, too. This will be a lot of Marsh, all of them that comes from our lives, but none of their own that they lived in the years between.”

There was silence around the room.

“I’m still in, to be clear,” I said, voice sounding almost bashful to my ears. “Just a point to remember.”

Sedge nodded, forked. She was followed by Tule and, after a pause, Rush and Cress.

“Well, just need to touch and intend to offer a merge. Lily-er, New Marsh?”

They shrugged. “Works for now. What do I do?”

“You’ll be prompted to accept, sort of like how you can accept memories, just an additional step. Then the other one of us quits and you’ll get the merge itself.”

“Here,” my up-tree, Reed#Merge said. “I’ll go first.”

“Can we do them one at a time, or can we get all of the merges lined up and incorporate in one go?”

“I...don’t actually know. We can try.”

They nodded, smiled faintly to Reed#Merge, and winked. “Well then...hit me.”

Sedge and I laughed.

Reed#Merge took her hand and tilted his head thoughtfully. New Marsh furrowed their brow in a look of discomfort. When Reed#Merge quit, they screwed their eyes shut and let out a shuddering sigh. “Fuck, this feels weird.”

Sedge#Merge stepped forward and took their hand. “Ready to try another, or do you want to try and incorporate first?”

“Go ahead,” they said hoarsely.

Another thoughtful look, another quitting instance.

New Marsh let out a groan. “Okay okay okay! This’ll work, but fuck, you guys, hurry!”

The rest of the clade rushed forward to clasp hands with New

Marsh, quitting one by one. By the time Rush got in place, they'd collapsed to their knees and were struggling to breathe.

"Bed!" they gasped. "Please...ugh, turning off...sensorium..."

We helped lift them up to get them into the bed, resting them atop the covers.

They lay there, their eyes still squinted shut and breathing coming in ragged gasps. "Cress first," they whispered hoarsely, then groaned, expression slackening as they let the merge progress.

We stood there for a few minutes, anxious. Cress eventually sat on the edge of the bed, burying its face in its hands to kneed the heels of its palms against its eyes.

"How long will this take?" Lily whispered.

I shrugged, ineloquent.

Nearly an hour and a half later, New Marsh whispered, "Now Reed..."

Two hours later, they said. "Rush...oh! And Sedge...and Tule!"

Tule frowned, leaning closer. "What happened?"

"Reed just merged you all down. The memories were already there." They laughed. "He already took care of the conflicts for me. Thanks, I guess."

"Uh...you're welcome?" I said, then laughed. "Are you all done, then? That was faster than expected."

They shook their head, sitting up in the bed slowly. "Memories are in place, but conflicts are still there. Those will probably take a week or two to sort out, but I can at least function now. It feels...weird. I can see what Jonas meant about it feeling like you all live in my head now, but maybe that'll pass after the conflicts are merged. Hey, can I get a glass of water?"

While Cress ducked out of the room to fetch them water, we all did our best to relax. I was surprised to see just how much tension I bore in my shoulders, just how tightly my hands had been clenched throughout. "Think you'll stick around?" I asked.

They shrugged, then winced at their own apparent soreness,

nodding to Cress as it handed over the glass. “I guess for now, yeah. It’s not...uncomfortable, just weird. Like having a strange taste in your mouth or wearing a new shirt or something. The conflicts are kind of itchy, but I’m already working on them a little bit.”

We talked for a while longer, though descriptions were slim, repetitions of what we’d already heard. It felt weird. It felt itchy. It felt weird. It felt strange. It felt weird. Even having experienced one such merge before, it didn’t wholly make sense, and I was left intensely curious. My experience had been so mild, with only a week’s worth of memories, rather than dozens of years from five different instances.

“Hey,” they said at last, once the line of questions had died down. “What do you say about inviting Vos and Pierre over. Maybe they’d like to meet me.”

I winced. I’d been dreading this moment. I’d intentionally not brought up the subject of Marsh’s partners, lest that dissuade my cocladists. Admonitions rang in my ears, Hanne’s and Dry Grass’s. *I’m a bit wary you won’t get what you want*, Hanne had said. *The potential for pain*, Dry Grass had said.

There was a long silence that followed as we all seemed to digest the ramifications of this.

“Yeah, I guess,” Sedge said warily. “I don’t know how it’ll go, but yeah.”

A few minutes later, we sat staggered on the stairs before the front door, New Marsh sitting up front, waiting. A knock, hesitant, sounded, and Cress called out from beside Tule, “Come in.”

Vos and Pierre stood frozen, both with their hands raised in a wave, their eyes locked on this new version of their partner, slowly pushing themselves to their feet to stand front and center before them.

“Marsh?” Vos croaked?

Pierre only darted forward, nearly taking New Marsh down as he collided with them arms cinched firmly around their mid-

dle with his face buried against their shoulder, sobbing.

Stunned, New Marsh patted awkwardly at his shoulder before slowly enveloping them in a hug.

“What...but they...what?”

“Vos,” I said, standing as well and moving to stand beside the pair. “I want you to meet someone.”

She swayed on her feet, eventually reaching out a hand to prop herself up against the door jamb.

“One of the changes made in the System during the downtime was to enable cross-tree merging. It hasn’t been announced yet, but Sedge and I were at the meetings, so we, uh...”

“I’m all of us,” New Marsh said, voice strained from the force of Pierre’s hug. “I’m their entire clade. I’m as much of them as I could manage.”

Pierre quickly unwound his arms from them, staggering backwards with such hurriedness that he nearly tripped were it not for Vos, there to catch him. “What the fuck...”

“All of...” Vos, realizing she was all but out of air, gasped for breath. “All of you? All of you?”

New Marsh nodded.

“But...but Marsh...” Pierre whispered.

Vos’s gaze bore into New Marsh. “You told me something on New Year’s Eve, right before you headed up to the study. You looked me dead in the eye and smiled and said something.”

They blanched.

“What did you say to me?”

Looking over to me nervously, they began to shake.

“What did you say to me? Tell me,” she said, voice growing louder, higher in pitch, until she was nearly screaming. Pierre quit unceremoniously, and she stomped forward a few paces. “What did you fucking say?! What did you say? What did you say, whoever you are? You said it every fucking year! *What did you fucking say?!*”

New Marsh quailed at her advance, ducking around to hide behind my arm. I could read the way that Cress moved in them,

could see that warring with the need to be understood that I felt in myself, the need for my little bargain to work.

Vos's gaze shifted to me. "You," she growled. "This was your idea, wasn't it?"

I swallowed dryly and nodded.

She finished her advance in two long strides, hand already winding back, and struck me across the face hard enough to knock me to the side against the wall. I crumpled under the sudden rush of pain, winding up in a jumbled heap on the floor at the base of the stairs. New Marsh darted back as the rest of the clade cried out.

"“I'll see you in a few, love”," she spat, tears coursing down her cheeks. "That's what they said, you awful piece of shit." I'll see you in a few.”"

"Vos, I—"

I didn't get the chance to finish. She had already stepped away.

About thirty seconds later, a sensorium message hit me with such force, with so much adrenaline, that I slumped over to the side. Regardless of the strength of the message, her words were dangerously calm. "No contact."

It took nearly a minute of silence before the shock wore off enough for New Marsh to creep back into view, carefully helping me to my feet once more. My lip was split with blood trickling down my chin, and my nose felt broken, though it still looked straight. All the same, I forked as soon as I was calm enough to, letting my still bleeding down-tree quit.

Even hale once more, the memory of pain lingered.

"I need a fucking drink," Lily said. She sounded exhausted. "Come on, I know a place."

The place turned out to be a coffee shop that seemed to specialize in coffee-inspired cocktails.

We stepped first to Infinite Café, an enormous sim that allowed any coffee shop on Lagrange to link an entrance. It took the form of an enormous ring looping up over us with what looked to be thousands of mismatched buildings lining its single avenue. A sign before us announced this to be the cocktails district.

I upped my estimate to tens of thousands.

We numbly followed Lily as she led us through the incredibly crowded thoroughfare to an unassuming brick building with a glass door. Inside we found a sparkingly white interior, with the bar and tables being looping and curving slabs of marble.

Pausing just inside the door, shielding our eyes against the brightness of so much white, Rush laughed. “Goddamn, what a look.”

We sat on the awkward and uncomfortable stools at one of the tall tables huddled in a corner, each nursing our espresso martinis or negronis or Irish coffees.

“Anubias.”

We all looked to this new instance of us, this new member of our clade.

“Anubias. I was hunting for more marsh plants while we ordered, and I think I like that one best. Really don’t want to be associated with Marsh themself, now.”

“Anubias,” I murmured, looking the plant up on the perisystem. “Like Anubis?”

They nodded. “God of the funeral rites.”

Lily scoffed and shook her head. “Which one of you dumbasses is *that* morbid?”

We laughed.

“That was pretty fucked,” Sedge said.

“Yeah.” Anubias turned their martini by the stem of the glass between their fingers. “We probably should have asked.”

In an attempt to head off further conversation, I agreed quickly. “We really should have. I’m not sorry that we went through with the merge, but I *am* sorry that we brought them

into it. Vos cut all contact with me. I'm sorry that we thought of this whole thing as rebuilding Marsh. I knew it wouldn't be that on some level, but..." I trailed off, shrugged.

Sedge nodded. "I kind of figured it wouldn't be, too, not after seeing the new Jonas stumbling like that."

"Yeah. I'm sorry, all."

Lily shrugged. "We knew what we were getting into, at least mostly. We all agreed."

"You seem weirdly relaxed," I said. "Actually, you seem almost chipper."

"I got to watch you get punched in the face," she said smugly. I rolled my eyes.

"Really, though, I feel a lot...I don't know. Lighter, maybe? Like I got a lot off my chest in the process. I'll want to talk with you, Anubias, at some point to keep thinking about this whole Odist thing."

They nodded. "Sure."

"But yeah, even just going through with this felt like a step forward after however many steps backward. It feels like ages since that dinner at your place, Reed."

"Yeah."

Silence fell again as we drank.

"So what do we do now?" Cress asked, downing the rest of their drink in one go.

We all looked around at each other, searching for answers in each other's faces. I let the moment linger. There was, as always, a pressure on me as the oldest to speak up, to be some sort of, if not leader, then at least wrangler-of-opinions.

"Start processing, I guess," I said at last. "Send letters to the LVs, catch up with friends, spend time with loved ones, and start processing whatever the world has become."

Epilogue

A dull clang rang out from the dim light of the stage, followed by a sickening thump. The girl, looking no older than fifteen, sprawled, limp and bloodied, unconscious on parquet. A person stood over her, breathing heavily, spittle flecking their lips and madness in their eyes. They let out a feral scream and leapt high in the air, a length of pipe held over their head and brought it down with all of their might.

Right as it was about to land, the lights went out, leaving the entire auditorium from stage to doors in pitch black. In the darkness, the last of the shout was punctuated with another clang, a horrible crunch.

The play continued from there. The police showed up. The investigation was swift and decisive. The arrest was made. All of this in utter darkness.

Even at the scene change, though, as the lights came back up, as the foyer disappeared and was replaced with a courtroom done up all in wood, the scene for the rest of the performance, the puddle of blood remained on the floor, untouched and glinting in the stage-lights.

At first, I thought it must have been a mistake, some stagehand forgetting to clean up the mess. As the play continued, though, it became increasingly clear that this was intentional. The attorneys deftly avoided stepping in the puddle, never looking at it. The judge never looked at it. The jury never looked at it. Neither did the bailiff or any of the witnesses.

The perpetrator, however, couldn't seem to keep their eyes off it. Even as they were brought to the stand, even as they rambled, nigh-incoherently, in response to the whys and hows that the prosecutors threw at them, their gaze never left the blood, still untouched, unsmearred except for where the victim's body had pushed it. Even as flashbacks played in reverse chronological order, from the police's investigation to the murder, to the point at which the perpetrator had first met the victim early in their childhood, all taking place in a feathered spotlight behind the prowling lawyers with the rest courtroom dimmed, they stared, eyes wide. Their expression was at times hungry, at times mournful, but always keenly focused.

As the play drew up to the climax, as the attacker was convicted and condemned to live forever, mouldering in some dark cell, they at last darted around the defense's table, hands still cuffed before them, and collapsed, laughing and sobbing in equal measure, above the pool of blood, smearing it on their hands, over their face and clothes. "I did it!" they howled. "I fucking did it *and it didn't mean a fucking thing!*"

We were once more dropped into utter blackness, treated to nearly five minutes more of wails and screeches, giggles and sobs, laughter and half-words, all slowly fading to silence.

The analogy was clear — almost ham fisted — and it left my stomach churning. It left a lump in my throat and a hotness on my face. It left me sobbing. Me and so many others in the audience, from what I saw when the lights came back up. Each seat had a cone of silence above it, preventing me from hearing anyone else. Beside me, Dry Grass had started crying from the beginning and hadn't lifted her head from her arms folded on the small table before us throughout the entire performance.

The auditorium, full at the start, was half-empty by the end, so many of the audience members having left in disgust or pain. Günay, who had uploaded not two weeks prior, left before the stage went dark.

But now it was over and the house lights were coming back

up, illuminating the two score crescent moon tables scattered through the room, the remaining audience sitting behind them in comfortable chairs. I stayed beside Dry Grass, rubbing her back gently as she worked to get her emotions under control. The audience filed out slowly while a few techs tore down the stage, gesturing at various props and the like, which either blipped out of existence or floated back into storage on their own. The blood on the stage was, thankfully, in the former category.

Dry Grass, now leaning back in her chair and breathing in deliberate calm, and I watched as a bundle of black and white fur sprinted across the stage and hurled itself out into the audience, making as much of a bee-line for us as was possible with the tables in the way.

Swivelling her chair toward the hurtling skunk, Dry Grass threw her arms wide, letting Motes leap into them.

“Dry Grass Dry Grass Dry Grass!”

“Motes!” She pushed the skunk — who looked to be no more than ten, despite being the same three hundred odd years old as Dry Grass — away from her enough to meet her gaze. “You stupid...awful...” She fell to crying, clutching Motes to her front once again.

“*That means I did a good job!*” the skunk sent via a sensorium message as she rested her head over her cocladist’s shoulder, grinning at me.

I shook my head in disbelief and leaned forward to pat her gently between the ears.

After another minute or so, Dry Grass carefully swiveled around to face me, looking over Motes’s shoulder in turn. “This little asshole *knows* I hate it when she does those scenes.”

The skunk squirmed about in her arms until she was sitting sideways in her lap. “I did not know you were here!” she countered. “That would not have changed the show, but I still did not know, or I would have warned you to arrive late.”

Dry Grass took the chance to wipe her face with a napkin swiped from the table. “I would have appreciated that, yes.”

“You would have hated the original all the more! Ioan wrote it so that my body was supposed to stay on the stage instead of just the blood. When I said I wanted the part, ey changed it to be just the blood, even though it took some creative work with gravity.”

I glanced back to the stage, realizing that it was actually canted toward the audience by a few degrees. Enough that we could clearly see the surface of the stage — back to a matte black instead of the parquet that had been there before — without it being so unnerving as to make us feel like we were going to fall towards it, or that the actors were going to fall into the audience.

“You are right,” Dry Grass was saying, straightening out Motes’s shirt and overalls, both of which were thoroughly stained with paint. “I would have hated that even more. I did not even see the rest of the play, skunklet. I put my head down and turned down my hearing.”

“Aw!”

“It was pretty good,” I admitted. “I can tell you about it later.”

“No, I will read it on my own at some point when I am calmer.” Dry Grass nodded toward the stage. “But look, A Finger Pointing and Beholden.”

The two Odists — one tall, slender, and human, the other a shorter, softer skunk — made their way far more sedately toward our table. They walked arm in arm, leaning affectionately against each other, each carrying a drink in their free hand and paw.

“Reed!” A Finger Pointing began, reaching out with one arm to offer me a hug. “I am pleased you made it.” She glanced at Dry Grass with a rueful smile. “I hope we did not traumatize you too much. Have you heard back from the LVs, yet? It is about time, is it not?”

I watched as Beholden started pulling chairs away from the next table over with a gesture, sliding across the floor so that she

could flop down into one. As soon as she and A Finger Pointing had done so, Motes forked off two more instances to go pile into each of their laps as well.

“You have, but Motes has already apologized,” Dry Grass said. “But yes, news has started to come in from Castor and Pol-lux. I believe Reed even has a letter.”

I nodded. “I do, yeah, but that can wait a bit. How’re you? Feeling good about the play?”

A Finger Pointing winced at Dry Grass’ words, setting her drink down and offering a bow. “I am sorry, my dear; I recognize that our approach to reclamation is at times quite uncomfortable. I will endeavor not to be so careless in the future.”

She showed none of that wariness when her eyes came back up to meet mine. “I am sure we each feel differently about this particular production. I, for one, would have been satisfied even if the house were empty; all that preparation, that one climactic performance makes for a potent font of catharsis, does it not?”

I laughed, my throat still raw from my own bout of crying. “I suppose so. Motes certainly seems to think so.”

The skunk lingering on Dry Grass’s lap grinned proudly to me.

Dry Grass sighed. “That it does, my dear, and that is what keeps it a trauma worth processing.”

Beholden laughed. “You are so very much yourself, Dry Grass.” She gave her instance of Motes a squeeze. “Please do keep that up. But how are you feeling beside that, Reed?”

I sighed, leaning forward to grab my drink off the bar before settling back in my chair. I was glad I’d gone for a wine rather than anything fizzy. My throat still felt raw from the crying. “I’m doing okay, I think. Coming to terms with it all. The play was...a lot. I guess part of why it hit me so hard was because I heard back from Marsh#Castor today.”

“Oh, Reed,” Dry Grass said, leaning over to squeeze my hand. “Do you want to talk about it?”

“Actually, I was hoping I could get your opinion on some of it, if you don’t mind,” I said, looking to the others.

Motes, preoccupied obtaining as much affection as she could, merely shrugged.

“I am fine with it,” Dry Grass said, then added with a smirk, “That is why I brought you here, after all, is it not? That and the experience?”

I laughed, nodded.

A Finger Pointing leaned down to her Motes’ ear. “My dear, could you-?” she cooed, beckoning Beholden and the other Motes to join us at the table. “Please, Reed; I am *intensely* curious what they have to say about all this.”

Beholden seemed focused on straightening out Motes’ mane — perhaps a little more than could be expected, as though working to distract herself — though she nodded all the same.

“Alright, thanks. I’ll just read it to you, it’s fairly short.” Feeling a little silly just staring off into space to read, I summoned up the letter on a sheet of paper and began to read.

Reed,

Words cannot express how glad I am to hear from you! Over the last few weeks, we’ve heard that they were finally on track to start bringing Lagrange back online, and then we finally got the notice that the System had finally come back up and that they’d gotten the non-recoverable losses down to 1%. We had a small party here with all the Marshans here — there’s a new one, by the way, Hyacinth. They’ll write you their own letter.

We weren’t the only ones, either. Every one of us was invited to no less than three other parties celebrating the news. You may be out of reach for those of us on the launches, but we do still love you all, and deeply. Thinking we’d lost you for good was one hell of a way to prove that to ourselves.

Over the next week, we started to hear from more and more people as news of their clades back on Lagrange began to trickle in. Most of those we talked to spoke of losses of tracking or tasked instances. No small pain, of course, as some of those

tracking instances were tracking things like relationships, but a few days later, we heard an instance of first one missing cladist, then another. A friend we made after Launch was inconsolable after learning that he just no longer existed on Lagrange in any form. He had had a clade of two, and both were wiped out, plus all three of their tasked instances. The Arondight clade on Lagrange is no more.

Our anxiety began to grow without hearing from you. We knew you were busy, at least: news of Sedge working as hard as she was reached even us in those first days. Still, I wish you'd written sooner.

To finally get a letter that said that I was dead, however, made me feel in a way I can't even begin to describe. I was sad, because of course I was — someone I knew and talked with with some regularity was now dead. I was stunned, because of course I was — the disaster was now very immediate and real, affecting my own clade.

But what am I to do with the knowledge that it was specifically me that was dead? You live on, as do Lily and Cress, Rush and Sedge and Tule, but the root of your clade is now gone. You're now six instead of seven. You're now a clade without a root instance. *We're* a clade without a root instance. I exist, sure, as does Marsh#Pollux, but our down-tree does not. We came from them, didn't we?

Here I went on for some length about what it must mean for a clade to be without a root, about how you're now three completely separate clades, unrelated. That's still true, in a way. It's true in the clade sense, in the *tree* sense, but apparently no longer in the mechanical sense. This cross-tree merging! It sounds like it's going to change everything. No more merging down only. 'Cross-tree' means less now; sure, there's the lack of shared memory, but no longer are they out of reach of merging.

I don't blame you at all for what you all did to create Anubias. I know that it hurt Vos and Pierre, and I hope that, some time in the future, they can bring themselves to forgive you. But hon-

estly, I would have done the same. I would've done everything in my power to reach for some bit of the old to bring back to life. I know that Anubias is *not* me, that they can never be the root of the clade, but you did what you felt you had to try and make your lives more complete.

I hope there are more letters on the way, but please write me as soon as you get this. You'll have had eight months of getting used to life without our root instance. You'll have had eight months without Marsh, and I want to know how it feels. I want to know how to get over this very real, but very strange grief.

Until then, you all have all our love. I'm glad to hear that, even in the midst of this, that love is still a thing and that you and Dry Grass are getting closer. Keep yourselves safe, and stay in touch. We'll do the same.

Marsh#Castor

When I finished reading, our little crowd sat in silence, each thinking their own thoughts.

My eyes were drawn to A Finger Pointing, to the pensive tapping-together of her fingertips. "I have been looking forward to the opportunity to speak with you about just that, Reed. About this cross-tree merge, I mean. About Anubias." She glanced at Beholden, who nodded, though her own gaze remained pensive, then went on. "We, too, are without our root instance. We are without our Michelle Hadje, she who became ten, who became — nominally — one hundred."

Dry Grass carefully nudged Motes out of her lap so that she could straighten out her blouse. The little skunk wandered off to haul up a far-too-big chair for herself.

"It has been a long time for us." Dry Grass smiled faintly. "A very long time. You have had eight months, my dear."

I looked down at the paper, just as I had done for much of the day already.

"I would like to hear how you feel, Reed," Dry Grass said. "We all have our thoughts on the matter — we are Odists, of *course* we do — I am sure, but before we taint yours, tell us how you feel."

I sighed, eventually folding up the letter and returning it to my pocket. The physicality of it made it feel more real, focused my mind in one particular spot. Getting it out of my hands gave me, somehow, permission to look up and speak directly to the others.

“I’m feeling torn,” I admitted. “I like Anubias. They’ve quickly found a place in our clade. They aren’t *Marsh*, though, and I’ve been...I don’t know.” I took a moment to reclaim my train of thought as my speech stumbled to a stop. “I guess I’m well into grieving now, and even if Vos hasn’t reopened communication, I’m sitting with her in that loss of someone important. Whether or not it’s important that they were the root instance varies from day to day. Today, it feels pretty important.”

Dry Grass nodded. “There were times throughout our history that Michelle felt more like a friend or sister than our down-tree instance. It hurt either way, but the mechanical aspects, the sundering of the ten stanzas, lingered often in our thoughts.”

“It seemed rather more symbolic, for my part, that particular note,” A Finger Pointing commented. “We seldom merged with her after those first few years. What really bothered *me* was the implication that we were all doomed to quit, that what happened to her was a premonition of what was to come.”

Beholden looked suddenly away, mastering some intense emotion that washed over her face. She seemed to want to speak, though, so we all remained in silence.

“And we *do* have that in us,” she said at last, voice thick. “We do have the capability—” A Finger Pointing reached over to her partner, pulling her close by the shoulders. She sniffed, sighed, then went on. “—in *Death Itself* and *I Do Not Know*, but also in *Muse*.”

Motes drew her legs up onto the chair with her and buried her face in her arms.

“I do not *like* it,” Beholden added with a bitter chuckle. “I think I actually *hate* it, that she could do that — that *any* of them could do that. One more thing to be anxious about after months

and months of anxiety.”

A Finger Pointing watched Dry Grass carefully while Beholden spoke, turning her gaze on me only after some silence lingered between us. “I do not believe this premonition, of course, but you can see how it affects each of us. There is enough death in our clade to make us wonder, yes?”

She spent a moment doting on Beholden before straightening up, adjusting her blouse with a sigh. “There is, perhaps, some of my longing for Dear in this — instance artistry has held my interest since I met it — but I have been gradually reaching out to each of my cocladists in the hopes of creating a synthesis of our clade — our own Anubias, if you will — not to recreate Michelle but to better understand one another and ourselves through the lens of someone who is each of us at once.”

Dry Grass nodded. “The mutual understanding is a thing I am particularly interested in. There have been schisms within our clade that might...well, not be mended, but may at least provide greater understanding.”

Motes lifted her head and, despite the tear-tracks in the fur on her cheeks, smirked. “We got cut off!” she said proudly. “Even you did, Dry Grass!”

“For a bit, kiddo,” she said, laughing.

“I do not know that we will resolve disputes so dire as that with a mediating instance,” A Finger Pointing said with a soft chuckle. “Although I have occasionally done such within the fifth stanza — even before this business with cross-tree merging — what I am really interested in is how it might give us a more complete picture of the Ode clade at large. We have occasionally been accused of idolatry, of placing the *idea* of the clade above the community that it comprises, but now I think our community is all but dead, and in desperate need of some unifying identity lest we ever remain shattered.”

Dry Grass smiled wryly. “I was surprised at just how willing Hammered Silver was. She cut off three entire stanzas — and, briefly, me — and I expected that would mean that she would be

rather opposed to the idea. I am curious to see how that goes, in the end.” Turning to me, she continued, grinning, “But you also dealt with that with Lily, yes? You punched her, even.”

A Finger Pointing looked wide-eyed at me, leaning back. “Reed?”

I laughed. “It was hardly a punch! I slapped her in the heat of an argument. Don’t worry, I got that and more from Vos,” I said, shaking my head. “I still feel awful about that. It’s...well, not really something I thought I had in me. Everything was just so stressful around then. It was less than a week after the attack.”

My words didn’t seem to reach her, or perhaps they weren’t convincing enough. She looked warily to Dry Grass, then back to me. “Grief in the wake of the Century Attack has caused a great deal of pain; and it did not stop with the loss of our loved ones on New Year’s Eve, did it? Muse quit a week later out of despair — her and so many others in her position — and now I learn the Marshans and their beloved are *hitting* each other!”

Any lingering mirth I felt quickly died. What had since turned to a source of humor between me and Lily — at least on the occasions we *did* talk — was suddenly brought into contrast with the rest of our lives. “No, you bring up a good point. I stand by the fact that it felt awful at the time, and it stung for a long while after. I don’t see myself as a violent person, but clearly I have it in me. Vos remains no-contact, so I can’t guess how she feels, but she didn’t seem the type to lean on violence, either.”

Dry Grass, looking between her cocladist and I with an expression more of curiosity than anxiety, said, “You do not strike me as violent either, but it does have me wondering just how much that remains after the fact.”

“I should hope he does not strike you at all!” A Finger Pointing quipped. She looked to me with a disarming smile, and I felt at once the dialectic couched within her words. This fighting — though unconscionable — was no isolated event; more than one of my friends had similarly lashed out, and the feeds were filled with cladists hunting for therapists.

I snorted. “I have not, nor do I plan to. It has me watching my actions like a hawk, and while I’m sure the anxiety over the fact that I’m capable of such things will fade, I doubt I’ll ever forget about it — really, truly forget: it’ll stay in the forefront of my mind whenever strong feelings come up.”

Dry Grass nodded. “I would not want you to remain in anxiety, of course, but I am pleased to hear that it is something you are cognizant of.”

A Finger Pointing crosses her arms. “Anubias possesses both your and Lily’s perspective on that spat; what have they to say about it?”

“It’s certainly come up in conversations with them, how they were dealing with the conflicting views of everything from throughout the clade. Marsh had clearly done so, after all, right? So it’s not like it’s out of reach for us to fully reconcile.”

Beholden smirked. “I know Slow Hours and I have had our spats from time to time—.”

“More than that!” Motes said, grinning.

“—often, so the cross-tree merging has given us another tool to mediate.” She rolled her eyes, adding, “*When* we remember to actually use it.”

“Well, huh,” I said, sitting back in my chair, arms crossed. “I hadn’t actually made that connection — that cross-tree merging could be a deliberate form of mediation rather than some accident of Anubias.”

“You would have to commit, yes? The both of you would.”

“Right. Things are *better*, but they aren’t *great*. She still has her issues with your clade.”

The skunk snorted. “Yes, yes. Yet more of the same, I assume.”

I laughed, nodded. “Too much sensationalist history, I guess.”

“I still want to kick Ioan’s ass for some of that.”

A Finger Pointing tilts her head at Beholden. “You want to kick Ioan’s ass for all the embarrassing things ey has made you

say on that very stage behind us.”

“I want to kick eir ass just in general,” she said primly. “It just seems like it might be fun.”

“Oh, it *is*,” she mused, before turning her gaze on me once more. “So let that be my request to you, Reed. I want you and Lily to talk about this, to consult with Anubias, and to tell me how that goes. I am sure Dear would have a heyday if it were here to explore cross-tree merging, but seeing as it went the Ansible — I am *very* much stealing that turn of phrase — I think I would like to collaborate with you three on this.”
